

Seattle Department of Transportation

ANNUAL REPORT 2015

On-Street Paid Parking Occupancy

THIS REPORT PRESENTS ON-STREET OCCUPANCY DATA FOR SEATTLE'S PAID PARKING NEIGHBORHOODS AND INCLUDES RATE AND TIME CHANGES THAT HAVE OCCURRED SINCE 2014.

PROGRAM BACKGROUND

A VIBRANT SEATTLE WITH CONNECTED PEOPLE, PLACES, AND PRODUCTS.

The Seattle Department of Transportation's (SDOT) Parking Management Team's purpose is to plan, operate, and enforce an innovative and customer-focused parking system that provides fair and efficient access for people who live, work, and play in Seattle.

A key component of this work is to implement the City's Performance-Based Parking Pricing Program, established by Seattle Municipal Code (SMC) 11.16.121.

This section states, in part:

→The Director shall establish on-street parking rates and shall adjust parking rates higher (up to the Maximum Hourly Rate) or lower (as low as the Minimum Hourly Rate) in neighborhood parking areas based on measured occupancy so that approximately one or two open spaces are available on each blockface throughout the day in order to:

- 1 Support neighborhood business districts by making on-street parking available and by encouraging economic development.
- 2 Maintain adequate turnover of on-street parking spaces and reduce incidents of meter feeding in commercial districts.
- 3 Encourage an adequate amount of on-street parking availability for a variety of parking users, efficient use of off-street parking facilities, and enhanced use of transit and other transportation alternatives.
- 4 Reduce congestion in travel lanes caused by drivers seeking on-street parking.

To determine measured occupancy, SDOT collects occupancy data annually in all paid parking areas. The data collected are used to determine potential changes to on-street parking rates, time limits, and paid parking hours. This report provides a summary of occupancy data from 2014 and 2015.

PARKING DESIGNATIONS AND ACTIONS

PARKING DESIGNATIONS AND ACTIONS

Recognizing that demand often varies within each paid parking area, many neighborhoods are further divided into subareas. The parking rate is often higher in the neighborhood core area, reflecting the area of higher demand, and lower in the edge area. In addition, the AFTER 5 PM designation extends paid parking hours to 8 PM in areas with high evening demand and the BEST VALUE designation identifies areas with lower demand and lower paid parking rates. These tools are communicated through symbols on parking signs, as shown below under parking designations. On neighborhood summary pages in this report, BEST VALUE areas are shown in green with all other areas shown in blue.

This report uses the AFTER 5 PM designation or the ACTION symbols (described and shown below) to indicate the fall 2015 change on the neighborhood summary pages.

PARKING DESIGNATIONS

After 5

AFTER 5 PM

Parking hours are extended to 8 PM to support reliable visitor access in the early evening. The maximum parking time limit is extended from 2 hrs to 3 hrs after 5 PM.

VALUE

BEST VALUE

BEST VALUE parking blocks have lower rates or longer time limits and likely have more parking available.

FALL 2015 ACTION

NO CHANGE

The paid parking rate, hours, or time limits will not change in 2015.

DECREASE RATE

The paid parking rate will decrease by \$0.50/hour.

WATCH LIST

When peak occupancy is within 5% of the target range SDOT adds it to the watch list for 1 year and will review data results next year to determine if any changes are warranted.

INCREASE RATE

The paid parking rate will increase by \$0.50/hour.

TIME LIMITS

▼ DECREASE→The parking time limits will be decreased (for example, from 10 or 4 hours to 2 hours).

▲ INCREASE→The parking time limits will be increased (for example, from 2 hours to 4 hours).

DATA COLLECTION AND ANALYSIS PROCESS

PARKING SOLUTIONS FOR SEATTLE NEIGHBORHOODS

In 2015, SDOT collected parking data in March – May in most neighborhoods that have on-street paid parking. Due to installing new areas of paid parking in Ballard and new pay stations in Pioneer Square, these neighborhoods were collected in July. Additionally, a summer count was collected in the Ballard Locks, which has seasonal rates that match visitation patterns.

Data were collected on typical weekdays (Tuesday, Wednesday, or Thursday) to represent average parking conditions. Hourly occupancy observations were done in most areas from 8 AM - 9 PM, with select neighborhoods continuing as late as 12 AM.

Occupancy is defined as the percent of legal on-street parking spaces where a vehicle is parked at a given time. SDOT does not formally designate parking spaces, but does maintain an inventory of spaces that would exist if spaces were legally marked. These legal spaces are based on standard parking space dimensions and consider restrictions near intersections, driveways, and fire hydrants. Occupancy can be over 100% as vehicles often park close together or in illegal spaces.

SDOT uses an occupancy target range of 70 to 85 percent, which equates to 1 - 2 spaces available along a blockface. In 2015, SDOT will evaluate parking occupancy either by time of day groupings or by all-day occupancy. This is

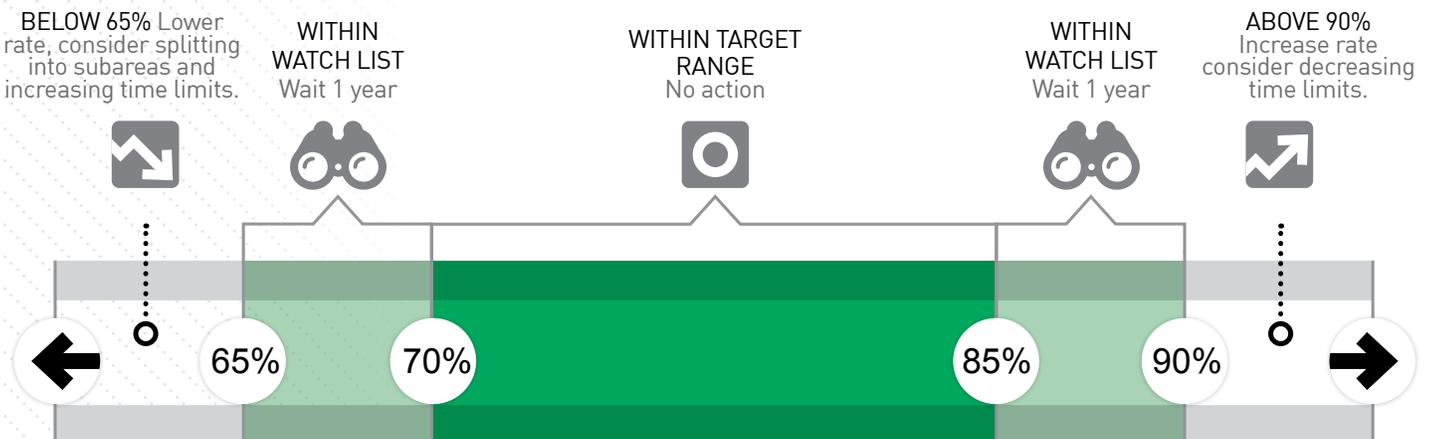

due to the pay station replacement project, with new pay stations providing the ability to charge different rates for different times of the day.

The all-day rate is calculated based on the 3 hours with the highest occupancy from either 8 AM to 5 PM (if paid parking ends at 6 PM) or 8 AM to 7 PM (if paid parking ends at 8 PM). The data for 5 PM and 7 PM are included if these are among the 3 highest hours. In areas with new pay stations and new time of day rates, the evaluation periods will be morning (9 AM and 10 AM occupancies), afternoon (3 highest hours from 11 AM to 5 PM), and evening (6 PM and 7 PM occupancies).

Occupancy for the 3 highest hours is not averaged, and the hours are not necessarily consecutive. The three-hour peak is calculated as the total vehicles divided by the total supply during those hours. SDOT uses this metric because parking supply can vary over the course of the day based on a variety of restrictions. In areas without evening paid parking, SDOT uses the 7 PM occupancy to determine if paid parking hours should be extended. If paid hours are extended to 8 PM, the initial evening rate will match the afternoon rate.

In addition to the target range, SDOT considers occupancy within 5 percent of the target range as within the watch list. This is defined as the ranges of 65-69 percent and 86-90 percent. Neighborhoods falling within the watch list will not have any rate changes made unless it is the second consecutive year of being above or below the target range. If occupancy values are outside of the target or watch list range (below 65 percent or above 90 percent), SDOT will increase or decrease the paid parking rate in the same year assuming the area is not already at the minimum \$1 or maximum \$4 per hour rate.

AREA OF ASSESSMENT FOR OCCUPANCY

DATA COLLECTION AND ANALYSIS PROCESS

◀ Seattle's new parking pay station

NEW TIME OF DAY RATES

Beginning in 2015, SDOT is replacing or retrofitting all pay stations citywide with leading-edge pay stations. The previous pay stations were installed starting in 2004. Most of the old pay stations are out of warranty and have outdated communications and parking management capabilities.

Among the new capabilities, new pay stations will allow SDOT to set parking rates by time of day. This will allow for setting rates that more accurately match parking conditions, since parking occupancy can vary over the course of the day.

Pay stations in most parking areas will not be replaced until 2016, but by the end of 2015 we expect to have new pay stations in the following paid areas:

- Capitol Hill
- Chinatown/International District
- Commercial Core
- Pioneer Square
- South Lake Union

Matching this installation schedule, neighborhoods receiving new pay stations will be evaluated and rates will be set based on morning, afternoon, and evening parking conditions. Other neighborhoods will continue to have one rate for the entire day.

2014 WATCH LIST NEIGHBORHOOD

Based on the 2014 study results, the only neighborhood on the watch list was Cherry Hill, which had a daytime occupancy of 88% during the 3-hour peak. Other neighborhoods were in the target occupancy range, had a rate change, or were already priced at the citywide minimum (\$1) or maximum (\$4).
