Police Referrals

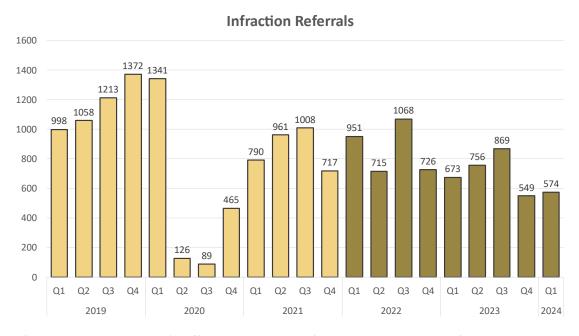

In the first quarter of 2024, the City Attorney's Office received 2,677 referrals from the Seattle Police Department. This represents a 4% increase from Q4 of 2023 and 1% increase from Q1 of 2023. The number of current referrals is below pre-COVID levels and lower than before the loss of a significant number of SPD officers.

- Referral: represents a unique person from an SPD report; a single report with two suspects
 would be two referrals. This reflects the best measure of law department workload and is used
 in this analysis.
- **Report:** a single document sent from the Seattle Police Department.
- **Individual:** one, unique person referred to CAO; most individuals will only have a single referral, but some can have dozens like the criteria for the High Utilizer Initiative.
- Charges: are the actual criminal offenses. Each report and each individual can have many.

Infractions

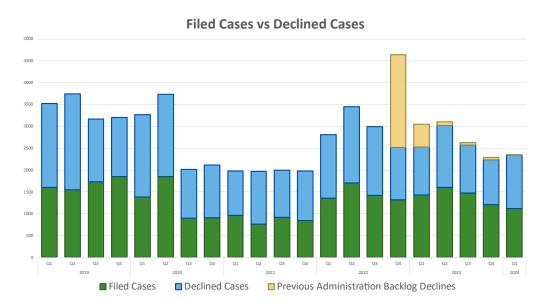

When an individual receives a citation for an infraction, it does not go to the City Attorney's Office. If the citation is challenged, also called "contested," then it is referred to the City Attorney's Office by the court. Contested citations are almost always filed the same day they are received at the CAO. Contested citations are not part of the misdemeanor system and therefore are measured separately in the graph below.

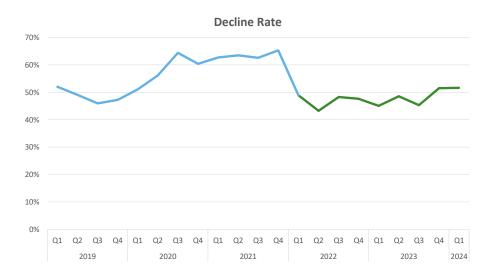

In Q1 of 2024, the City Attorney's Office received 574 infractions that were sent from the Seattle Municipal Court. This represents a 5% increase from Q4 of 2023 and a 15% decrease from Q1 of 2023.

Case Filing

Referrals can either be filed cases with the Seattle Municipal Court or declined. Diverted referrals turn into declines after successful completion of requirements.

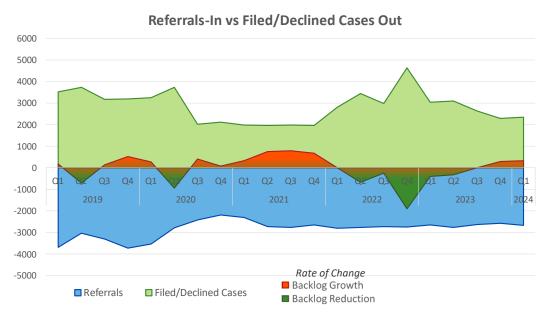

This chart shows the output of filing decisions from the City Attorney's Office. In Q1 of 2024, the City Attorney's Office filed 1,114 cases (a decrease of 8% from Q4 2023 and 22% less than Q1, 2023) and declined a total of 1,1238 (up 14% from Q4 2023 and down 24% from Q1 2023 when there were significant backlog declines). The tan elements represent declined cases from the previous administration's backlog.

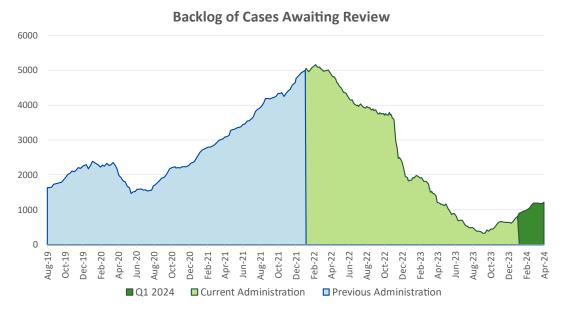

Decline rates as measured by $\frac{aectines}{files+declines}$ remained the same in the first quarter of 2024. The decline rate for filing decisions on referrals during Q1 2024 was 52%, equal to Q4 2023 and up from Q1 2023's 45%.

Backlog

Referrals awaiting a response are considered part of the backlog.

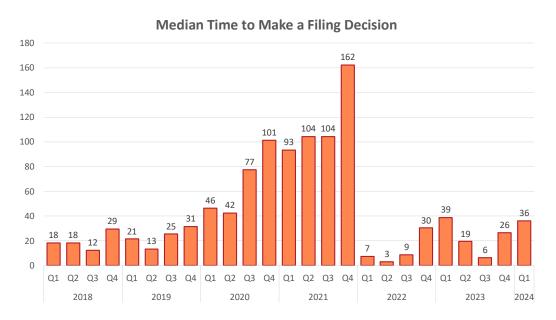

Responses to incoming referrals lagged for years and resulted in a substantial backlog within the Criminal Division. Areas in orange represent times when the backlog grew and areas in green represent times when it was addressed and reduced. The backlog was at 4990 referrals at the start of 2022.

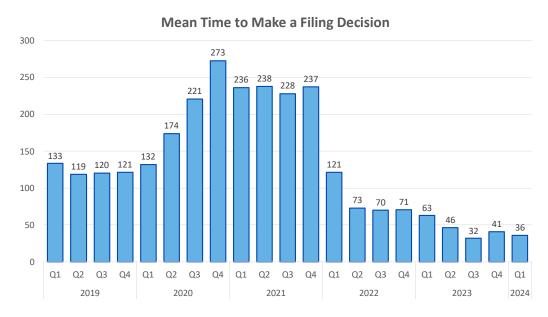

Changes in staffing in Q3 2023 resulted in a temporary increase of the backlog though it still remains well below earlier levels.

Close-in-Time Filing

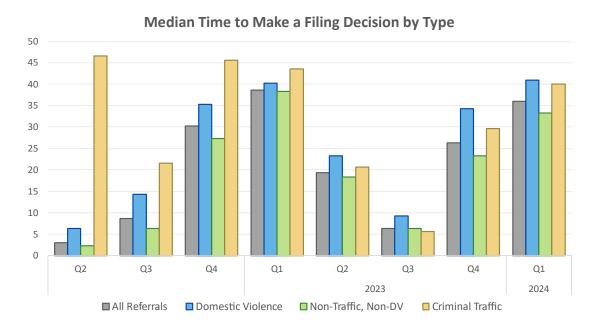

The Close-in-Time filing policy set by City Attorney Davison created the goal of making a filing decision within five business days (seven calendar days). Domestic violence referrals are afforded an additional week to engage in a trauma informed approach, which considers input from the victim on their safety concerns. Referrals involving LEAD clients get 30 days for clients to engage in services.

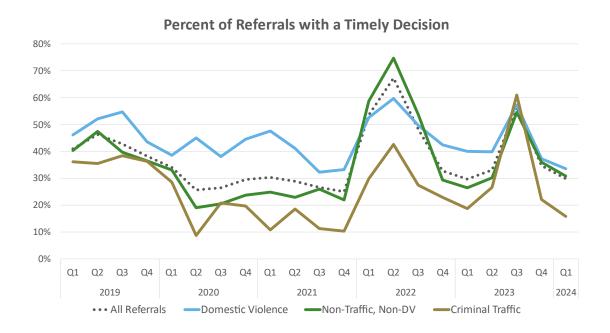

The reduced Review and Filing Unit staffing lowered the effectiveness of Close-in-Time filing in Q4 2022. These issues were mostly fixed by the end of Q1, but it took some time to get back to close-in-time goals. A similar staffing issue returned in Q4 of 2023 and remains an issue.

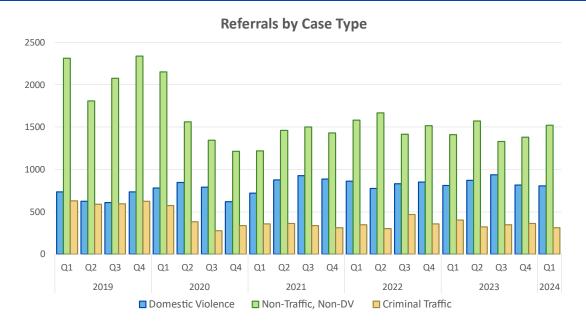

Median filing time is a more accurate description of the data due to its skewed nature.

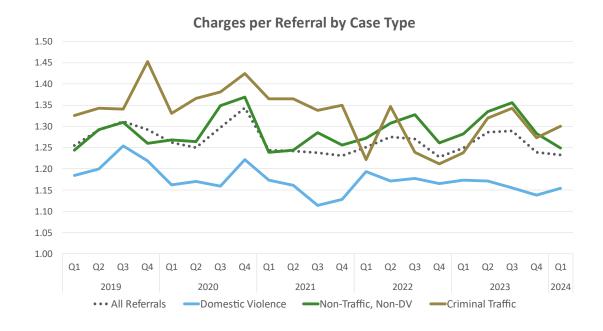

Median time to make a filing decision is still lower than historical levels, but it has increased beyond desired goals. While the median times are still under a month, the number that meet policy goals has dropped to pre-policy levels.

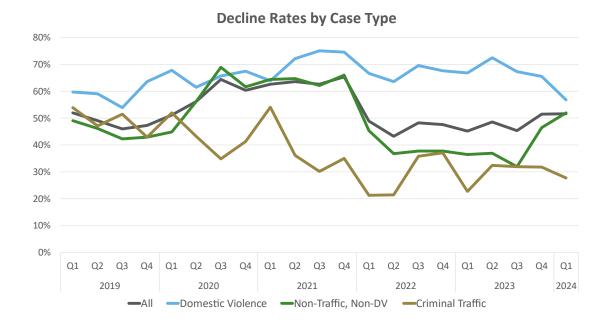

Case Type Specifics

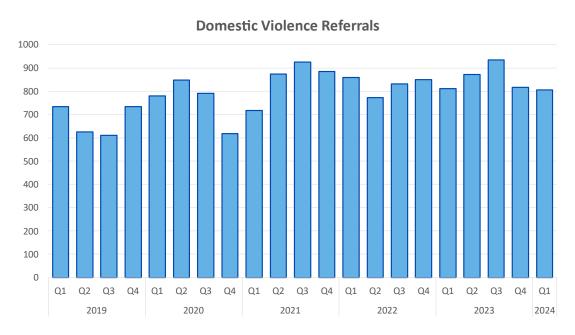

The number of charges on each police referral averages about 5 charges for every 4 referrals (1.25) and does not vary much between quarters. The decrease for Criminal Traffic is likely due to far fewer referrals including driving with a suspended license.

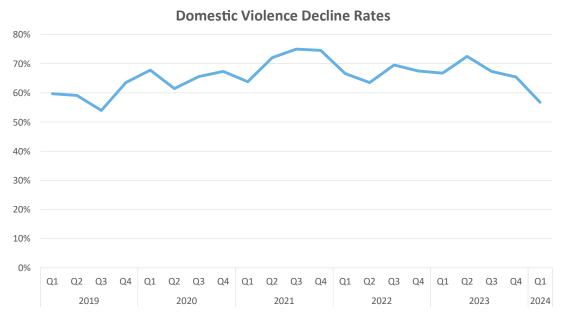

Domestic violence referrals historically have higher decline rates for a variety of reasons. Prosecutors carefully weigh the impact to the victim, the victim's desired outcome, lethality factors, and the nature of past referrals in addition to the evidence. Some referrals are declined as part of a consolidation of cases between other jurisdictions. The reduction in the decline rate for criminal traffic referrals is because a higher percentage of them now include DUIs.

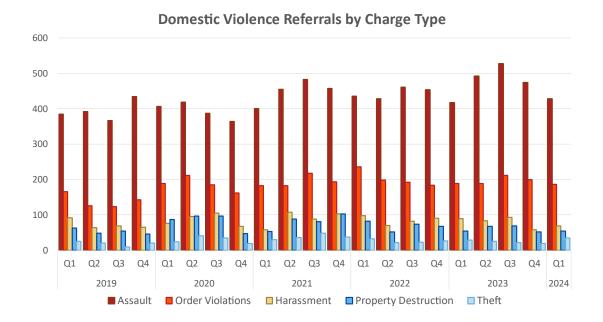

Domestic Violence

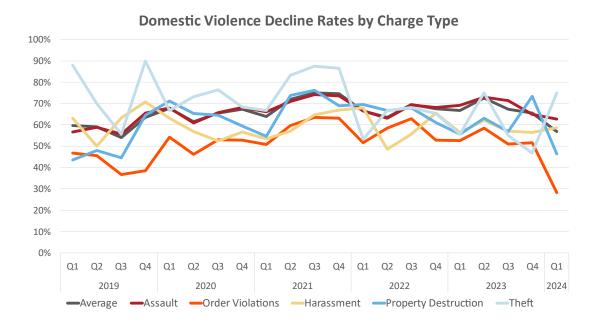

Domestic violence referrals did not see a sharp decrease during the pandemic, unlike other referrals. If Seattle followed the national trend of increased incidents of domestic violence during the pandemic, then these numbers could be under-reported due to SPD under-staffing. They were similar to both Q4 2023 and Q1 2023.

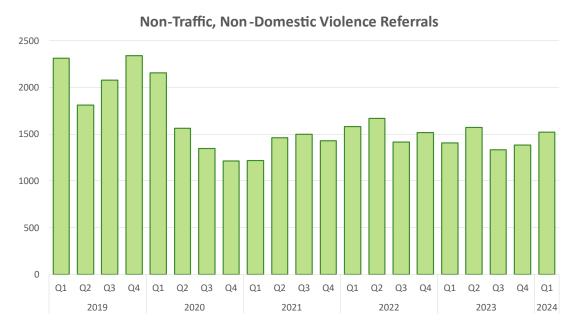

Domestic violence referrals differ because of the impact charges may have on a survivor of intimate partner or family violence. Their ability to assist prosecution varies based on many factors, leading to a higher decline rate. These rates do not reflect backlog filing and the Q1 2024 rate was 57%.

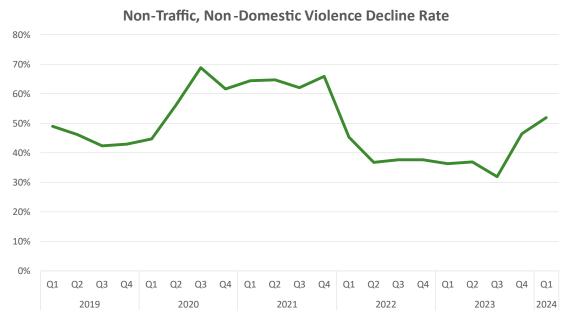

Assaults and protection/no contact order violations are the most common types of domestic violence charges. This is not an exhaustive list of domestic violence charges but represents the most common types.

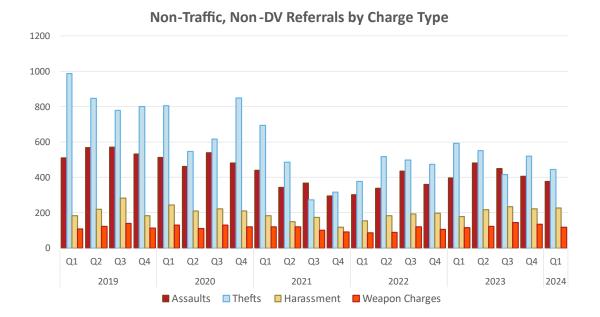

Criminal Non-Traffic, Non-Domestic Violence

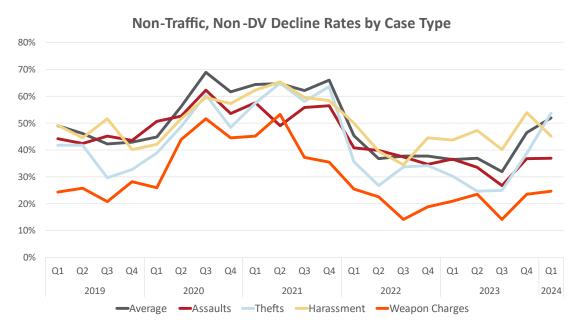

Criminal non-traffic, non-domestic violence referrals include many dozens of offenses and have a large proportion of thefts, trespasses, harassment, and assaults. They also include weapons charges and a myriad of less common offenses like reckless burning or false reporting.

Decline rates for these misdemeanors had been rising more than any other category through 2021. Part of this can be explained by the backlog in referrals that was increasing until early 2022. The decline rate not including backlog filing was 52% in Q1 2024.

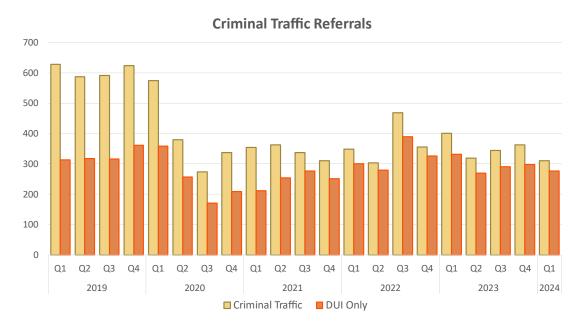

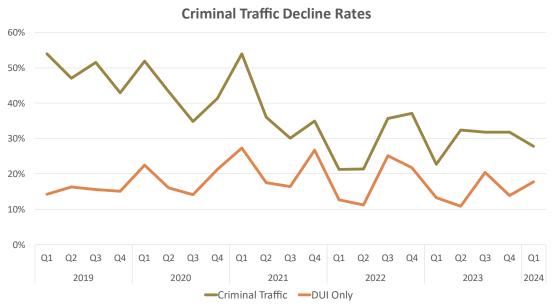

Assault and Theft are the most common non-traffic, non-domestic violence charges. Thefts are likely heavily under reported compared to assaults given the staffing challenges at SPD.

Weapons charges have the lowest decline rates, though their relatively smaller sample sizes lead to more variation.

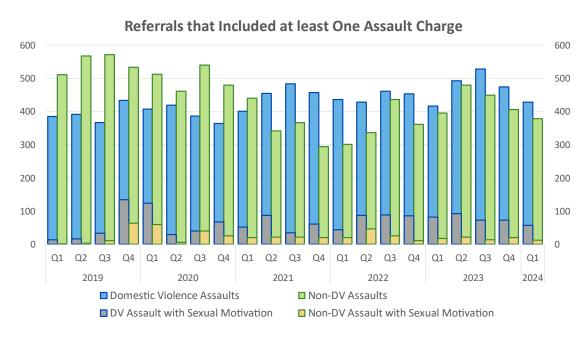

Criminal Traffic

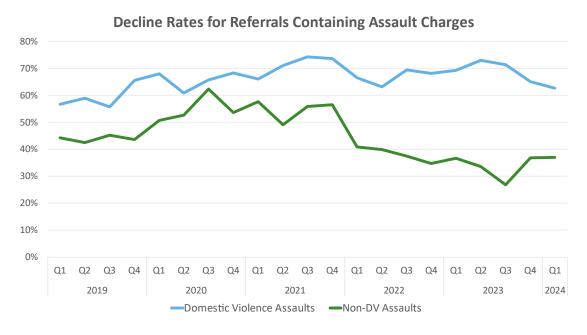

Historically DUIs have had very low decline rates but have been rising lately. This is potentially because of large delays at the state toxicology laboratory that has forced some declines. The overall traffic decline rate has dropped as DUIs have become an increasingly more dominant proportion of all traffic misdemeanors. Non-backlog filing saw a decline rate of 28% in Q1 2024.

Assault

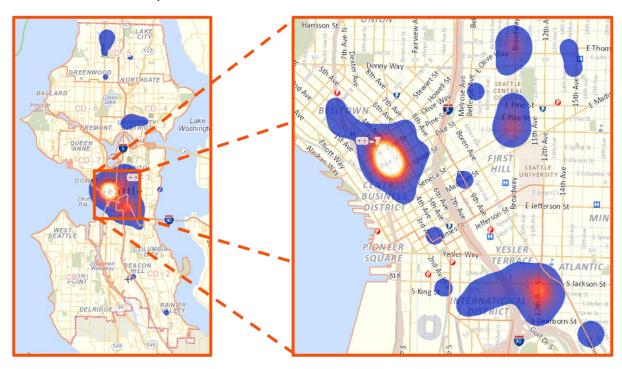

Assaults of all kinds fell with the cooler weather in Q1 2024.

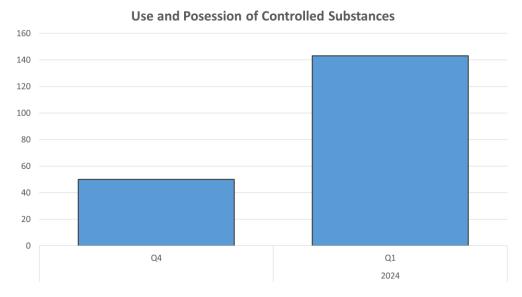

The decline rates for current DV assault referrals continues to fall.

Possession and Use of Controlled Substances

In 2023, Washington State passed a law making it illegal to consume or possess controlled substances like narcotics in public spaces. Later that year the City of Seattle passed its own ordinance on controlled substances. Below is a map of the referrals into the City Attorney's Office involving possession or use of controlled substances in Q1 of 2024:

This chart shows the incoming referrals for those crimes:

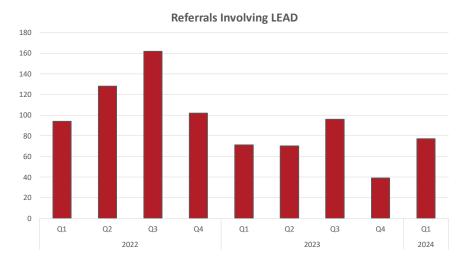

The Seattle Police Department began enforcing the City's ordinance in October of 2023 so Q4 of that year has partial data.

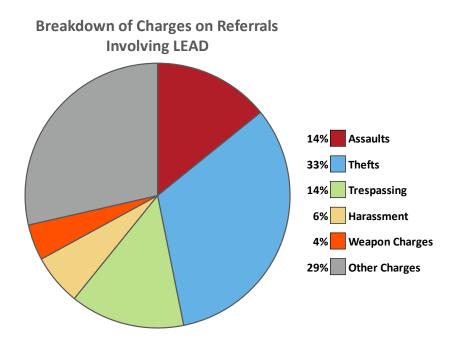

Alternatives to Traditional Prosecution

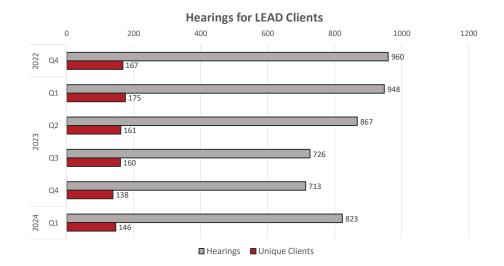

LEAD, CoLEAD, and Vital Clients

The Seattle City Attorney's Office LEAD prosecutors work with LEAD's almost 900 enrolled clients as well as 150 clients in CoLEAD and 60 in Vital.

The City Attorney's Office has started to track these clients with much greater detail. The department has integrated better client tracking as to overcome shortcomings in the current criminal case management system (DAMION). We are working on putting in past clients, but currently only have clients from 2022 onward.

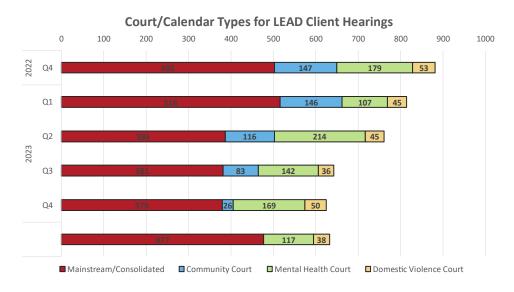

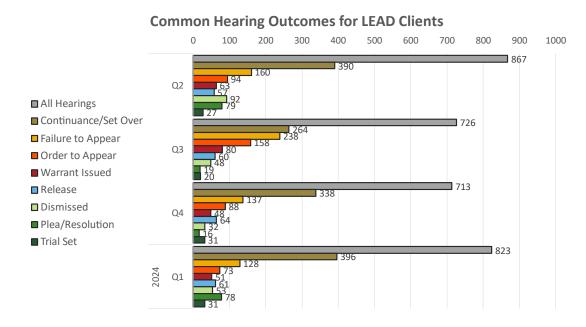

The Seattle City Attorney's Office has a specialized team to work with program clients. A new data tracking system was put in place starting in Q4 2022. In Q1 2024 the team was part of 823 hearings covering 146 clients. One person can have multiple hearings on the same day if they have multiple active cases. Clients with multiple hearings require more work and coordination from the City Attorney's Office. The average number of hearings per client as approximately five.

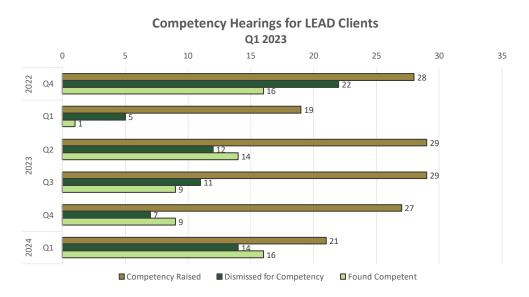

There are 4 main hearing types:

- Mainstream/Consolidated: This category covers cases that are not part of the below categories
- Community Court: An ineffective court that has been disbanded in favor of pre-file diversion
- Mental Health Court: This references the court described on page 23
- Domestic Violence Court: For clients suspected of committing domestic violence

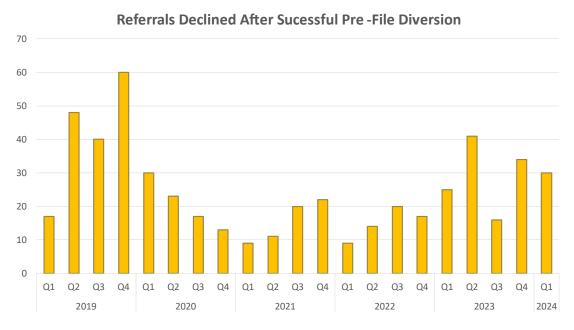

The above are common hearing outcomes for program clients. Each hearing can have multiple outcomes. A continuance or set-over is when a hearing is delayed and set for a later date. A failure to appear often results in either an order to appear the next time or a warrant to do so. A Release refers to being released from custody either on their own recognizance, released with an electronic monitoring device, or a temporary release for something like treatment. Hearings can also have an outcome like a dismissal, plea or the setting of a trial date.

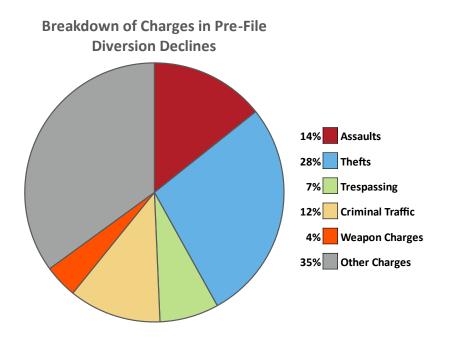

Hearings can also have an outcome of asking whether a defendant is mentally competent to stand trial as well as a dismissal because they are not found competent or they can be found competent. A competency finding does not always occur in the same quarter that it was raised.

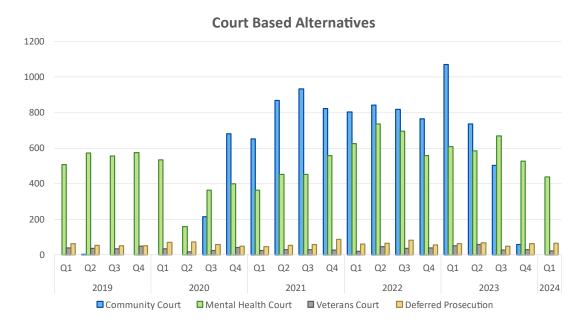

Pre-File Diversion

This data does not include diversions done by the team after a case has been filed.

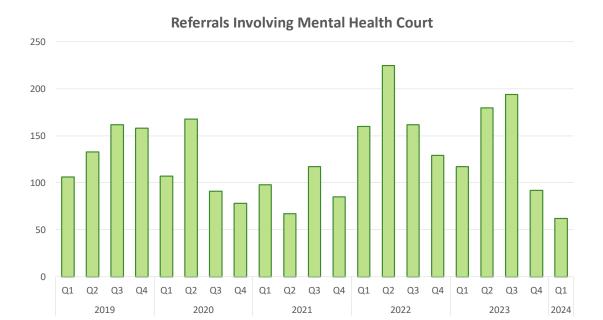

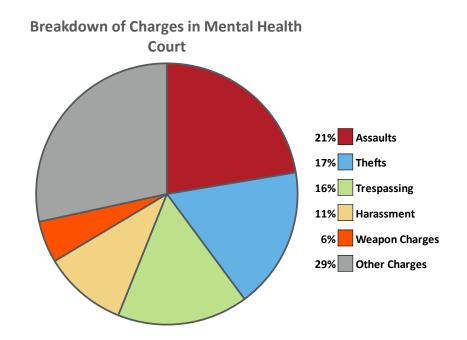

Court Based Alternatives

To compare between alternatives, the rest of the charts use the disposition date, but this one uses the date of court hearings. The gap in community court represents the time in which it was closed between its second and third iterations.

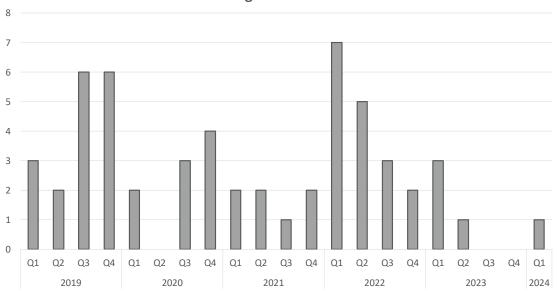

Mental Health Court

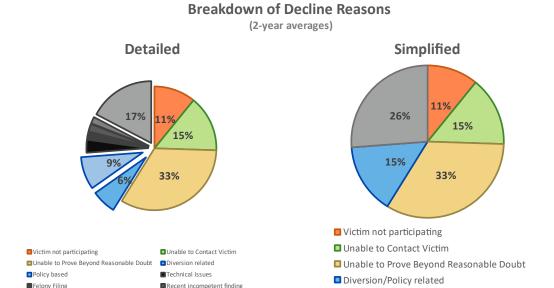

Veterans Treatment Court

Referrals Involving Veterans Treatment Court

Decline Reasons

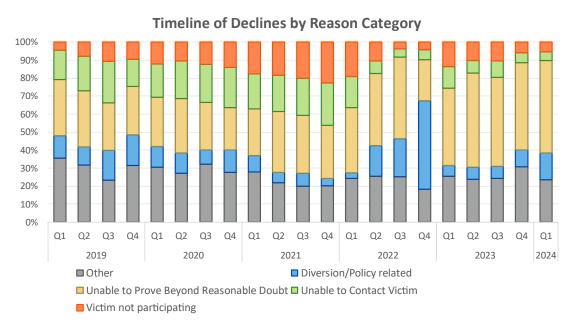

Bargained

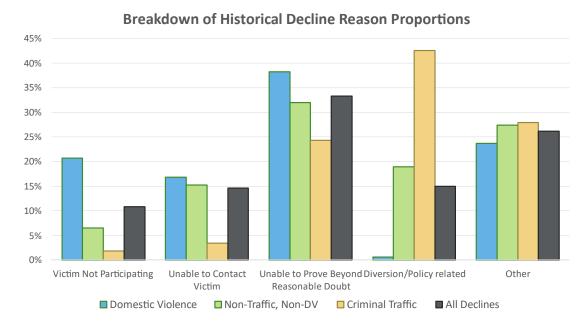

There are many reasons that the City Attorney's office may decline to file a case. The major ones are listed above. The simplified one is used for reporting ease. These are based on 5-year averages.

Other

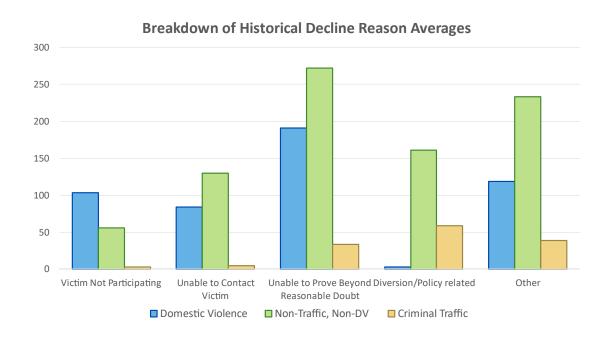

Other

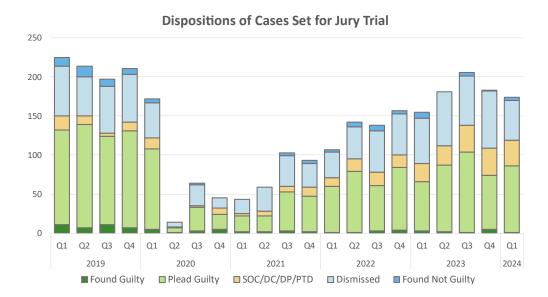

Victim related issues have continued to decline and have become a very small barrier to filing. This is partly due to better contact outcomes from the Close-In-Time policy as well as a concerted effort to look at the merits of cases beyond relying only on victim participation. Policy based declines in Q4 2022 are primarily due to the backlog filing project and skew the other proportions in that quarter.

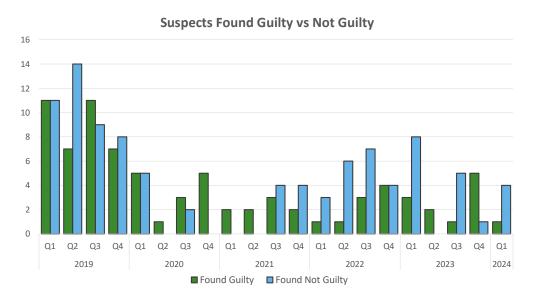

Over the past five years, a large proportion of domestic violence declines are related to the victim not wanting or being able to assist the prosecution. This is the primary reason that domestic violence decline rates are higher than for other crime types. The large percent of declines in criminal traffic referrals come from the policy of not pursuing charges on driving while license suspended charges. As these referrals are currently rare, this does not reflect the current state in 2024. The chart above shows the relative proportions of each type of decline for each crime type. The chart below shows the five-year average number of quarterly declines.

Final Dispositions

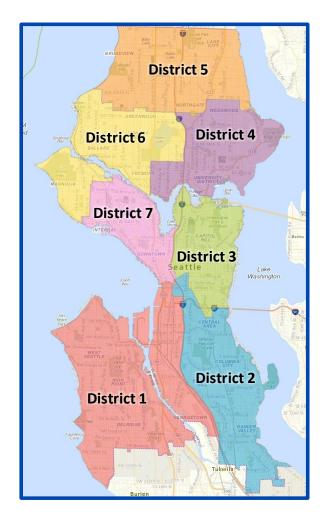

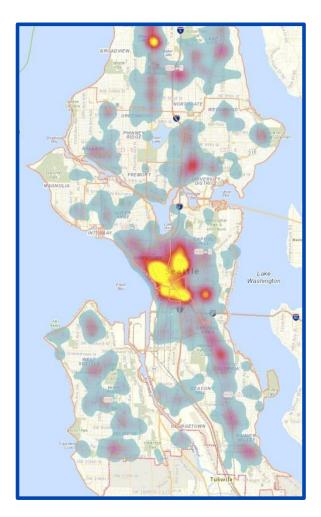

The most common final dispositions are guilty pleas, typically as part of a negotiated plea deal. Dismissals related to successful completion of alternatives to traditional prosecution, proof issues, and victim or witness related dismissials are also common. Guilty and not guilty findings via jury verdict are rare due to the decreased number of jury trials. The category "SOC/DC/DP/PTD" includes stipulated orders of continuances, dispositional continuances, deferred prosecution, and pre-trial diversion. All of those involve a situation where a defendant agrees to meet a set of requirements for a period of time and if successful, their case is dismissed.

Findings of guilty and not guilty after a jury trial make up a very small proportion of outcomes. Findings of either kind have been rare since the courts shut down for the COVID-19 Pandemic. As a result, the found guilty vs not guilty rate is not reliable.

District Specifics

Council Districts were redrawn effective Q1 2023. The largest changes were District 1 absorbing the land between the Duwamish and I-5 and District 6 absorbing Magnolia.

Mapping Accuracy

Mapping a police referral relies on the accuracy of the information on a report. Even after manually correcting addresses, some either do not have enough information or are not tied to a physical address in the city's GIS database. The most common of these are DUIs that occur on grade-separated roads.

	Domestic	Court Order		Weapons				Total
	Violence	Violations	Assault	Charges	Harassment	Theft	DUI	Referrals
Mapped	770	203	756	127	254	397	252	2554
UnMapped	35	5	36	4	6	11	24	123
Mapped %	96%	98%	95%	97%	98%	97%	91%	95%

Domestic Violence

Non-Traffic, Non-DV

Criminal Traffic

Domestic Violence

Domestic Violence Referrals concentrate in any part of the city that has a higher density of housing. In addition to the city's core, higher rates of domestic violence follow the light rail down the rainier valley and the denser portions of the Lake City Way and Aurora corridors. It can also be found in higher levels in West Seattle and Wallingford.

Criminal Non-Traffic, Non-Domestic Violence

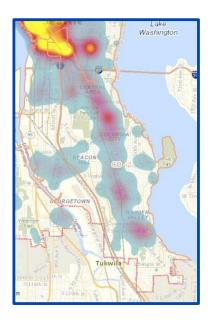

Misdemeanors that are neither traffic nor domestic violence related concentrate around commercial areas like Downtown, Capitol Hill, Northgate, The U District, Mount Baker, North Aurora, and Ballard.

Criminal Traffic

Unlike the other categories, criminal traffic misdemeanors do not have the highest concentration downtown. Rather they have the highest concentration in Capitol Hill. The downtown areas with the most are Pioneer Square and Belltown and are likely related to bar activity. North Aurora, Fremont, Ballard, Georgetown, and South Park also have higher incidents of criminal traffic referrals.

Gender Specifics

Demographic information originates with police reports and are on occasion updated by SCAO staff.

While males make up about three quarters of police referrals, crime victims are more proportional to the population with businesses making up a large proportion of the "other/unknown/business" category. Gender diverse individuals are less than one percent of victims and of suspects.

Policy Changes

There were no significant policy changes in Q1 2024.

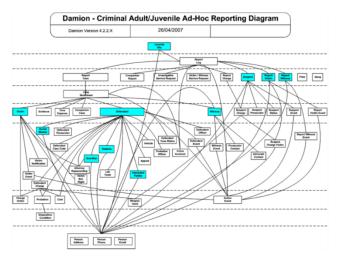

Reporting Challenges

DAMION

The criminal case management system currently used by the City Attorney's Office is the District Attorney Management Information Office Network (DAMION.) It is very complex and archaic. It was introduced at a similar time to the idea of Windows, and it still reflects its time origination by using icons from contemporary video games. Below is what the program looks like.

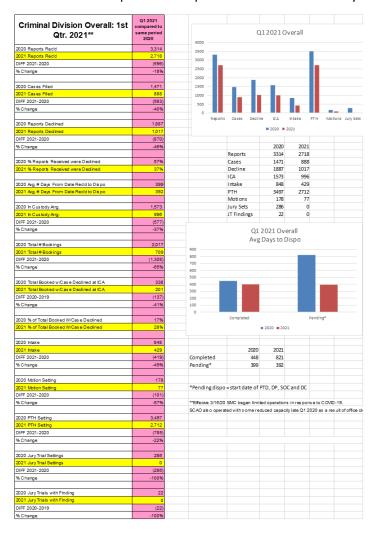

The database that is housed within DAMION uses a hierarchical relationship model which means that data from different sections can only be viewed together if they have a direct link and are not on the same level. For instance, it is not possible to view information from the Victim and Suspect sections at the same time. Extracting any sort of aggregate data from the database requires writing a custom "Ad Hoc Report." Below is a visual map of the data within the DAMION database.

The City Attorney's Office has been aware of data issues with DAMION and has been trying to replace it for 5 years. After a lengthy RFP process, the city settled on Justice Nexus and has spent millions of dollars over the past three years working on a new system. That process is still ongoing.

Prior Versions of the SPAR

The Statistics of Prosecution & Analysis Report (SPAR) was coded decades ago to query the DAMION database and return a digital "ticker tape" of values. It was not created to handle any form of demographics that are now required by council ordinance, nor does it look at historical context. Prior reports relied on copying this information into an excel sheet to display that period's data alongside the previous period's data. Below is an example of this report as it was delivered in years past.

Because the data in the department contains relatively high variability between quarters, a comparison to just one other period does not provide contextually accurate information to policy makers. It also lacked analysis to describe potential causes for high variance from previous periods in most instances or descriptions that would benefit readers from the general public.

The reports also contained information on outcomes provided by a companion query program. This was also copied into a spreadsheet most quarters and it showed counts of 20 "favorable" outcomes, 7 "unfavorable" and 2 others. An example is shown at the start of the following page.

While this example provides context of the entire previous year, it is for a different timeframe, so it is difficult to use the data for comparison. The graphic below also points out that sometimes the data can vary wildly from report to report. The two examples side by side are from Q2 and Q3 of 2021. One states that 2020 had zero cases dismissed due to no civilian witness and the other has over 1000 listed.

Case Management System Limitations

To overcome the limitations of the DAMION criminal case management system, the City Attorney's Office's Data and Transparency Team built a program that recreates the relevant sections of the DAMION database then runs analysis on that data. This should expedite the release of future reports while DAMION is still in use. This program continues to evolve to include additional functionality and now has over 32 million formulas spread across 21 sheets. Below is a screenshot of the number of calculations it requires to stitch the disparate sections of the DAMION database together and pull-out useful information:

Data Caveats

DAMION

Running the same report on different days can yield slightly different results as an automatic process can update a field. While specific values might change on the margins, overall data is consistent with itself and none of the marginal changes are enough to influence important trends or statistics.

Decline Rates

Decline Rates in this report are generally based on the quarter in which the referral was received.

Small Sample Sizes

Many categories, especially within demographic breakdowns represent very small quantities of data and are not useful for comparison or statistical analysis. For example, if there is one person that fits a set of criteria, then a decline rate can only be 0% or 100%. Similarly, a single event can have an unusably strong effect on the data. Even a sample of 20 that adds another data point will sway the aggregate by nearly 5%. Often, areas of data with too low of a sample size are not included.

Alternatives to Traditional Prosecution

The nature of alternatives is that they are very individualized and come in many forms. For this reason, it is difficult to compare one to the other and one person can be involved in many or none. In general, the information in this report refers to individuals who have successfully completed alternatives and not people who have not been successful.

Final Dispositions

Final Dispositions were changed to reflect cases instead of charges in Q3 2023.
