SEATTLE 1990 WHO WE ARE

Introduction

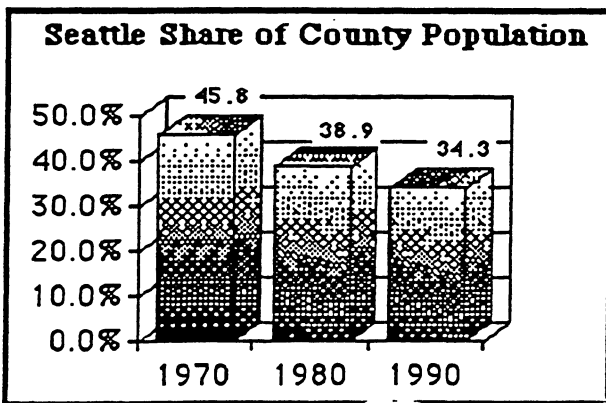

In 1990 there were 516,259 people who called Seattle home. Seattle is the 21st most populous city in the nation between Boston with 574,000 people and El Paso with 515,000 people.

These half-a-million people represent all ages, a wide diversity of races, live in a range of family types, and occupy various types of housing units. The 1990 population is the result of the reversal of a twenty-five year trend of population declines. Between 1960 and 1980 the population declined by over eleven percent from 557,087

to 493,846. The decade of the 1980's brought a reversal of that trend with a 4.5 percent increase. Out of the 193 cities with populations of over 100,000 Seattle's percentage change was the 110th highest between Worcester, MA. at 4.9 percent and Indianapolis at 4.3 percent. Spokane grew by 3.4 percent to 177,196 and Tacoma grew by 11.5 percent to 176,664.

Seattle is just one part of the larger Seattle metropolitan area. Seattle comprised just 34.3

percent of the 1,507,319 people living in King County in 1990. Our share of the county population has been steadily declining over the past three decades as population increases in the county have exceeded those in the city. Even King County does not encompass the entire metropolitan area. The urbanized area surrounding Seattle (areas with a density of at least 1,000 persons per square mile) has a total population of 1,744,086 of which Seattle

comprises 29.6 percent.

The overall change in population and the total population of 516,259 masks the details about the people who call Seattle home. The purpose of this report is to present a summary of information about the people who live in Seattle. This report includes information about how we live, our education levels, our income levels, how we get to work, and what types of housing units we call home.

In order to put the 1990 data in perspective this report presents comparisons to 1980 and to King County. Seattle in 1990 is a key part of the county and region and who we are today is closely tied to our past. Both our relationship with the county as a whole and with our own past provide useful insights to the importance of these data for understanding who we are.

This is by no means a comprehensive reporting of all the information available from the Census or other sources. The two appendices provide more information and many public libraries maintain collections of Census and other related publications.

Data Source

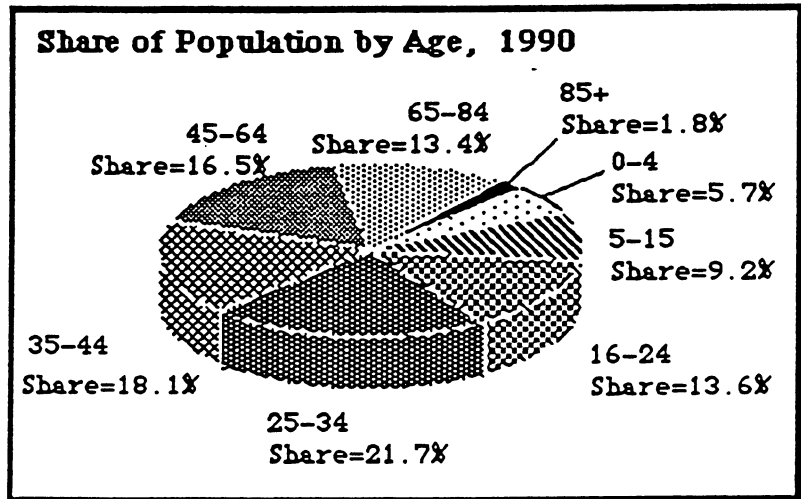

All the data presented in this report are results of the U.S. Census of Population and Housing. The census is conducted on April 1 every ten years to collect information about the people of the United States. This report includes data from both the 1980 and the 1990 Censuses. The data from 1980 were taken from published reports while the data pertaining to 1990 were extracted from computer readable data files.

There are two appendices that present tables of raw data that were used to prepare the various tables and figures in this report. Additional data and information is released by the Census Bureau and are available at most public libraries.

Age Structure

Understanding the age structure of the population is critical to understanding who we are, what our needs are, and what we have to offer as citizens of Seattle. In 1990 almost 30,000 (5.7 percent) of us were under five years old; and over 9,000 (1.8 percent) of us were over 85. The largest age group was between 25 and 34 -- 112,000 people -- which accounted for 21.7 percent of the total population.

The size of the various age groups in 1990 is the result of changes over the past decade that have varied among the ages. Overall the population in Seattle increased by 4.5 percent between 1980 and 1990. Over the decade, however, there was a great deal of variability in the change in population among the age groups. The population 16 to 24 years old decreased by over 21 percent from 89,000 to 70,000 while the population in the 35-44 age range increased by

almost 90 percent from 49,000 to 93,000. The change in population of the very young (0-4 years) and the very old (85+ years) both showed an increase over the decade as well.

In 1990 the people of Seattle accounted for just over 34 percent of all the people living in King County. Seattle, however, accounted for fewer young people and more people in the older age

groups than we might expect. While 34 percent of the overall population lived in Seattle, only 28 percent of the people under five and 23 percent of the people 5-15 lived in Seattle. At the other extreme over 45 percent of the people 65-84 and over 55 percent of the people over 85 lived in Seattle. What we see is that young people and people in mid-life (45-64 years) are less likely to live in Seattle than people

Age	1980	1990	Pct Change
0-4	24,139	29,269	21.3%
5-15	50,564	47,701	-5.7%
16-24	89,198	70,203	-21.3%
25-34	106,807	112,098	5.0%
35-44	49,272	93,285	89.3%
45-64	97,826	85,303	-12.8%
65-84	68,062	69,129	1.6%
85+	7,978	9,271	16.2%
Total	493,846	516,259	4.5%

in other age groups. This supports the notion held by many that Seattle, as with most urban centers, is a place where young adults come to live while starting their careers and forming their families then move on to suburban locations. The high share of the people over 65 living in the city is likely indicative of the fact that many of these older people moved to Seattle and settled here prior to the rapid development of the suburban areas surrounding the city.

Age	King County	Seattle	Share of County
0 - 4	104,013	29,269	28.1%
5 - 15	203,686	47,701	23.4%
16 - 24	181,647	70,203	38.6%
25 - 34	302,508	112,098	37.1%
35 - 44	270,385	93,285	34.5%
45 - 64	277,753	85,303	30.7%
65 - 84	150,631	69,129	45.9%
85 +	16,697	9,271	55.5%
Total	1,507,320	516,259	34.3%

City

Age is an important component of the population as it is indicative of demands for a broad range of services, both public and private. The demand for schools, parks, libraries, public safety, employment opportunities and other amenities varies a great deal with age.

CODE

D. DICTIONARY

Race and Hispanic Origin

Seattle in 1990 is a city made up of people from a very diverse set of backgrounds. As with most cities of Seattle's size the trend has been toward increasing diversity with an increase in the non- white populations. In 1990 one in four Seattlites was a person of color. This is an increase from approximately one in five in 1980. The most numerous racial group in Seattle is

Asian and Pacific Islander.

The 61,293 Asian and Pacific Islanders account for almost twelve percent of the total population.

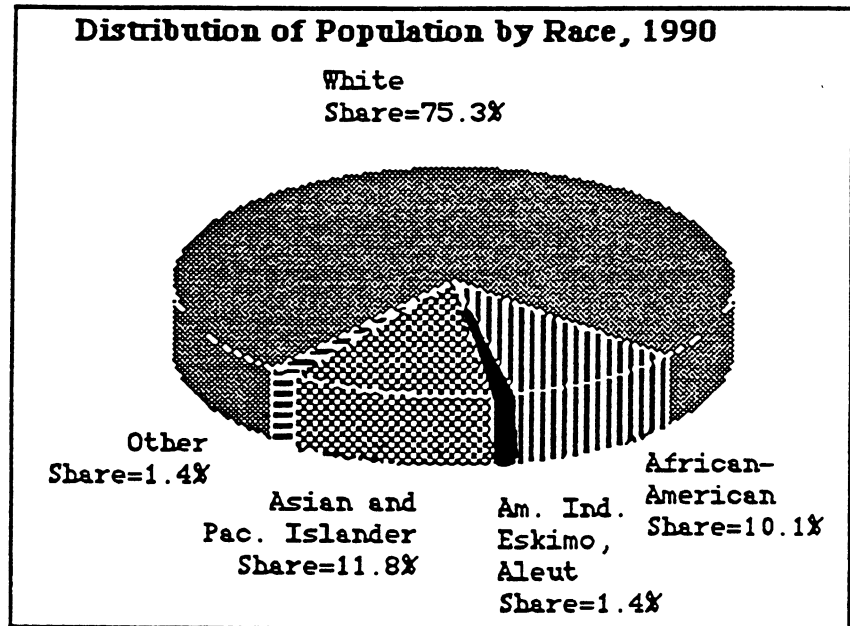

The African American population of 51,948 accounts for over ten percent of the population.

Compared to the State and King County, Seattle has a more racially diverse population. State-wide only 11.5 percent of the

population are people of color and in King County 15.2 percent are people of color. This diversity offers Seattle a host of opportunities as well as a host of challenges.

Seattle has become increasingly diverse over the past several decades. Between 1980 and 1990 the white population in Seattle declined by almost ten percent while the nonwhite population increased. The largest percentage increase was in the Asian and Pacific Islander population with a 56 percent rise. The number of people in the Other Races category increased by 39 percent and the Hispanic population increased by 44 percent.

The Asian and Pacific Islander population group is made up of people from a variety of different backgrounds and racial origins. In the past decade there has been a substantial increase in the Chinese, Filipino, and Vietnamese populations in the city while the Japanese population has remained relatively stable. In the Hispanic Origin category the growth in

Hispanics from Mexico was 61 percent while the number of people of other Hispanic origin increased by 31 percent.

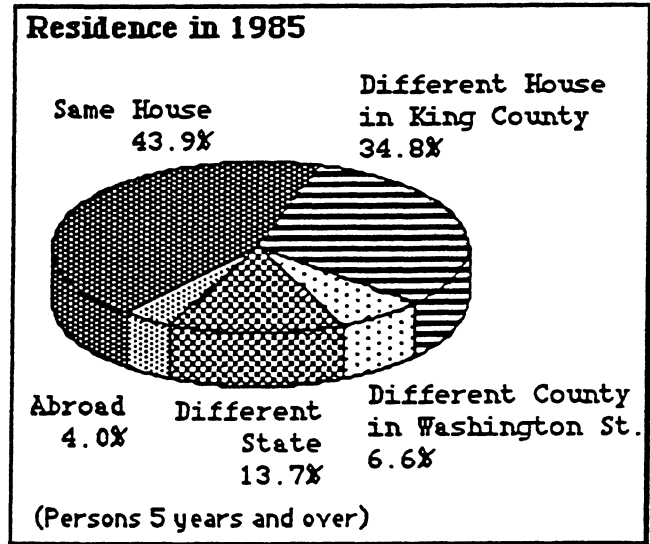

Population Change by Race, 1980-1990			
Race	1980	1990	Pct Change
White	396,275	388,858	-1.9%
African-American	46,565	51,948	11.6%
Am. Indian, Eskimo, Aleut	6,821	7,326	7.4%
Asian or Pac. Isle.	38,936	60,819	56.2%
Chinese	9,916	15,248	53.8%
Filipino	9,510	16,223	70.6%
Japanese	9,762	9,837	0.8%
Vietnamese	2,601	4,922	89.2%
Other Asian or Pacific Islander	7,147	14,589	104.1%
Other Race	5,249	7,308	39.2%
Hispanic Origin*	12,744	18,349	44.0%
Mexican	5,612	9,037	61.0%
Other Hispanic	7,132	9,312	30.6%

*Hispanic Origin can be of any race

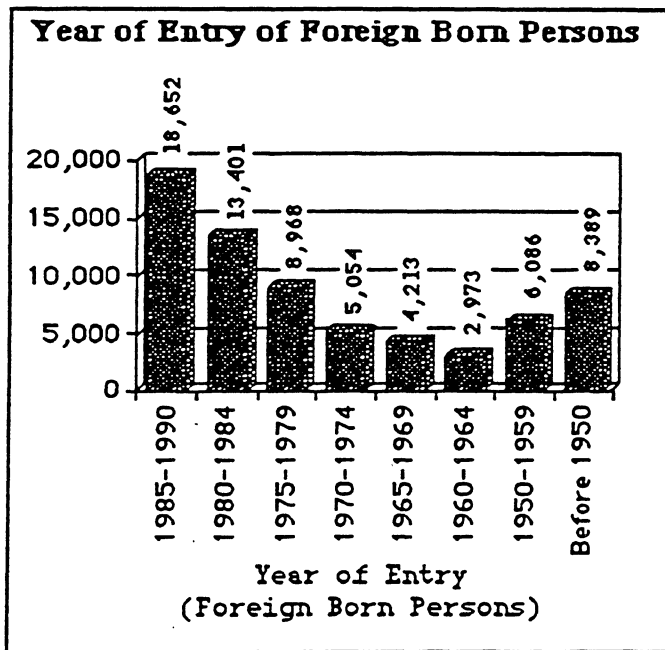

Migration and Mobility

One of the most talked about features of the American people is our mobility and movement from home to home. People in Seattle reflect this national stereotype. Only 44 percent of the people 5 years and over lived in the same house in 1990 as they did in 1985.

This distribution is similar to the state and King County as a whole where 46 percent and 44 percent respectively of the people five and over lived in the same house in 1985 and 1990. In Seattle an additional 35 percent lived in a different house elsewhere in King County. Migration from places outside of King County accounts for almost one-quarter of the people over five years of age.

Over the past decade a good deal of attention has been given to the immigration of people from foreign countries. A total of 67,736 people (13.1 percent) living in Seattle were born abroad. Almost half of those

foreign born came to this country during the 1980's. This trend was reflected somewhat in the change in racial groups between 1980 and 1990. It is also reflected in the distribution of foreign born persons by the year they entered the United States. Over 32,000 people (six percent) of Seattle's residents in 1990 were born abroad and moved to this country in the 1980's. Only 14,000 of the foreign born population arrived in this country during the 1970's. Seattle accounts for 48 percent of the 140,611 foreign born persons residing in all of King

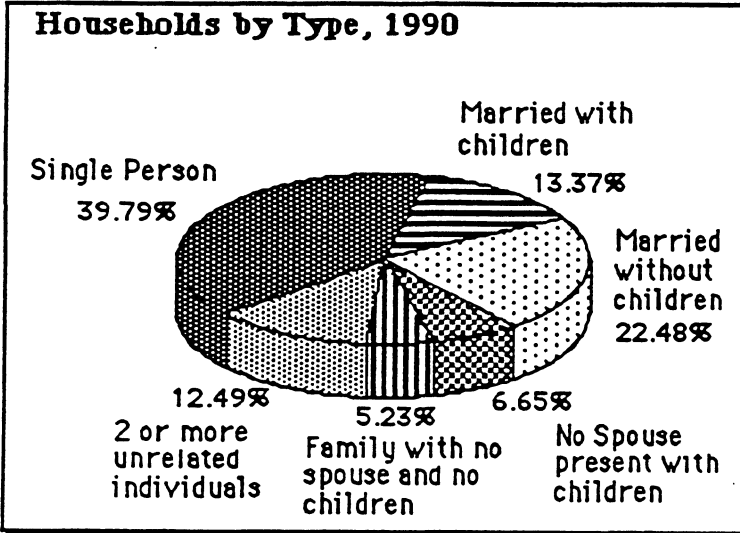

County and 54 percent of the 34,601 who arrived between 1985 and 1990.

Enabling these immigrants to function in this society requires a variety of support systems. One of the major barriers in many instances is their ability to speak English. In 1990 over 15,000 of Seattle's residents (2.9 percent) reported speaking English not well or not at all. Almost three-quarters of the people with English speaking difficulties speak an Asian or Pacific Islander language as their primary language. Seattle accounts for over 55 percent of the 27,509 people in all of King County who report speaking English not well or not at all.

Ability to Speak English	
Speak only English	412,047
Speak Spanish	
English well or very well	8,976
English not well or not at all	1,549
Speak Asian or Pac Islander	
English well or very well	31,357
English not well or not at all	11,502
Speak Other Language	
English well or very well	19,720
English not well or not at all	2,018

Household and Family Structure

Over the past several decades there have been some significant shifts in the way we Americans join with each other to form families and households. Families are defined for census purposes as groups of people joined by blood, marriage, or adoption while

households include families as well as single people living alone and groups of single people living together in the same housing unit. In Seattle, almost forty percent of the households are single person households and an additional twelve percent are households of two or more unrelated individuals. Just under 48 percent of the households are made up of families. Just one

of every five households have children and only thirteen percent fit the old stereotypical family structure consisting of a married couple with children.

Over the past decade the shift from family households to non-family households has become more pronounced. Single person households increased by 12 percent and

households with groups of unrelated individuals

increased by 40 percent.

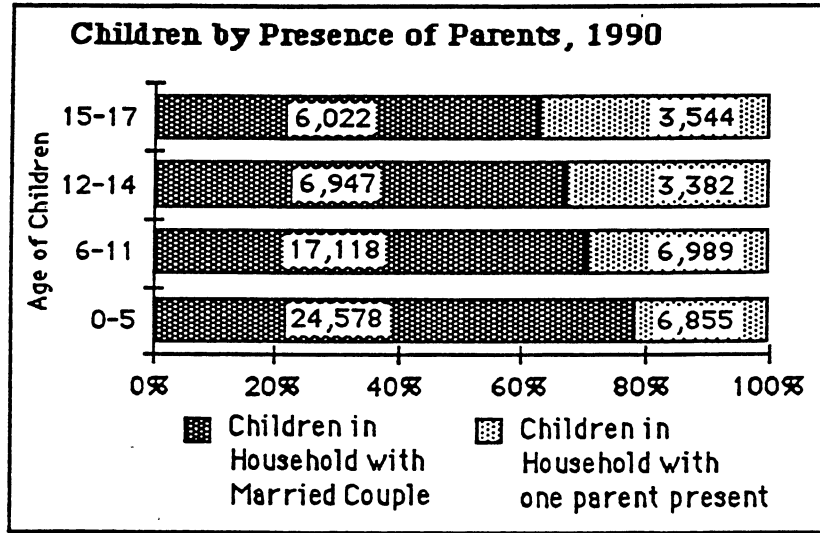

The number of married couple households decreased over the decade with the largest decline in married couples without children.

The impact of household and family structures on children is a frequently

Change in Household Types, 1980-1990

	1980	1990	Pct Change
Single Person	83,799	94,179	12.4%
Married with children	31,996	31,642	-1.1%
Married without children	58,160	53,204	-8.5%
No Spouse with children	13,494	15,736	16.6%
No spouse without children	11,299	12,387	9.6%
2 or more unrelated individuals	21,006	29,554	40.7%
Total	219,754	236,702	7.7%

asked question. The older a child is the more likely it is to live in a family with only one parent present. Just over 20 percent of the children under five live with one parent while just over 37 percent of children 15-17 live with one parent. Overall, 20,770 of Seattle's children under the age of 18 live in single parent households.

Housing

The decade of the 1980's brought with it a shift in the housing stock in Seattle.

The stock of single family residences increased by only one-half of one percent over the decade from 131,617 to 132,330. This low growth results in a shift from single family units constituting 57 percent of the total housing units to 53 percent of the

housing units. Also during the 1980's there was a slight shift between owner- and renter-occupied housing units. In 1980, 51 percent of the occupied housing units were owner-occupied and by 1990 that share had shifted to 49 percent. Overall there was a net increase of 19,110 (8.3 percent) housing units between 1980 and 1990. The largest increases were in multi-family buildings with three to forty-nine units.

	1980	1990	Pct Change
Owner Occupied	111,951	115,699	3.3%
Renter Occupied	107,518	121,003	12.5%
Vacant	10,458	12,330	17.9%
Building Size			
Single Family	131,617	132,330	0.5%
Duplex	10,344	10,491	1.4%
3 or 4 units	10,418	12,150	16.6%
5 to 9 units	14,375	16,636	15.7%
10 to 49 units	42,889	54,649	27.4%
50+ units	19,394	19,220	-0.9%
Mobile Home	885	694	-21.6%
Total Units	229,922	249,032	8.3%

	Persons per Unit
Owner Occupied	2.40
Renter Occupied	1.80
Building Size	
Single Family	2.50
Duplex	2.18
3 or 4 units	1.93
5 to 9 units	1.66
10 to 19 units	1.59
20 to 49 units	1.46
50+ units	1.31
Total	2.01

Along with changes in the housing stock and households and family structure there has been a change in the number of people occupying each housing unit.

On average there were just over 2 people per occupied housing unit in 1990. This varied from 2.4 in owner occupied and 2.5 in single family units to 1.8 in renter occupied and an average of just 1.3 persons per unit in buildings with 50 or more units.

Housing construction in Seattle over the past five decades which is reflected in counts of housing units in the city in 1990 by the decade in which they were built. The number of units varies from a high of 37,000 units

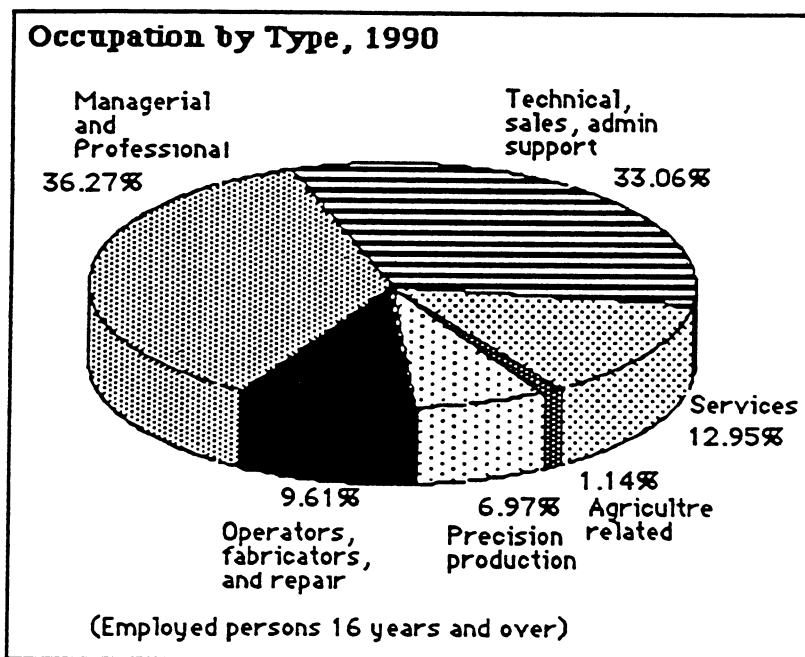

that were built during the 1950's to a low of 22,000 units during the 1970's. The 1980's was about average with 29,540 of Seattle's units being constructed. The net increase in units was only 19,110 between 1980 and 1990 with the demolition of 10,430 units. Just over 36 percent of Seattle's housing units were constructed prior to 1940.

Employment and Occupation

Of the 439,636 people in Seattle sixteen years and over, 64 percent were either employed or in the armed forces. Another 31 percent of the people 16 years and over were not in the labor force due to a variety of reasons including school, health, and personal choice. There were 14,659 people who were unemployed and actively looking for work. Those 14,659 unemployed people represent over 41 percent of the 35,391 unemployed people county-wide. The county tends to have a slightly higher share of its population 16 and over in the labor force than does Seattle, 68 percent in the city compared to 71 in the county.

Armed Forces	1,495
Civilian Labor Force	298,819
Employed	284,160
Unemployed	14,659
Not in Labor Force	139,049
Total	439,363

Most of the employed residents of Seattle are in a Professional or Managerial (36 percent) occupation or Sale or administrative support occupation (33 percent). Just

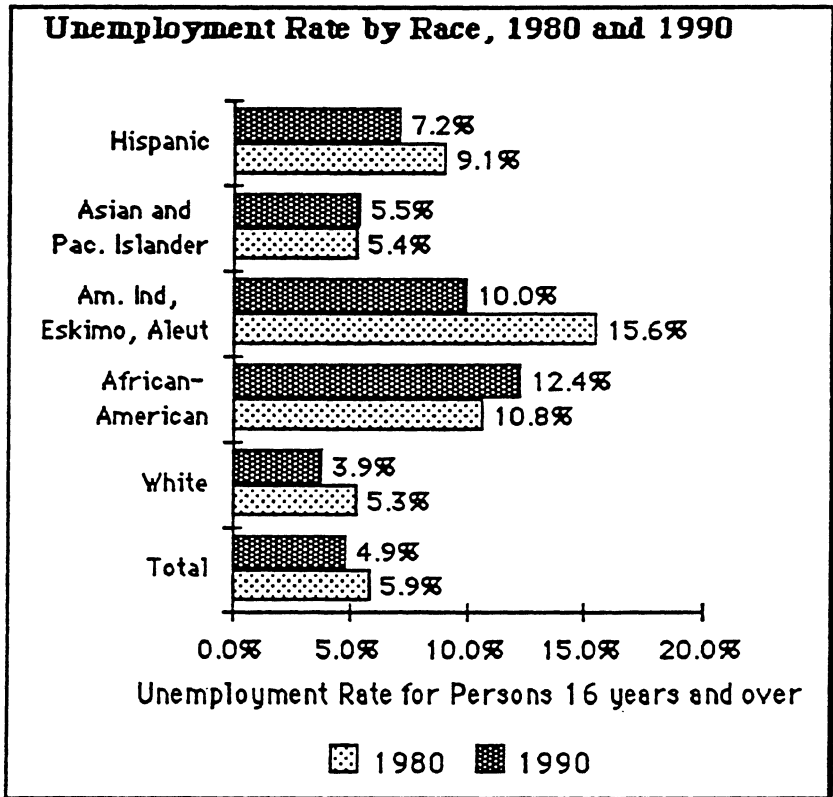

sixteen percent are in manufacturing type occupations such as machinery operators, and precision production.

While the population in Seattle increased by 4.5 percent over the 1980's the number of employed persons 16 years and over increased by 13.6 percent. There were 34,000 additional residents in Seattle employed in 1990. The highest percentage increases were in the professional and related service industries and the executive, managerial, administrative and professional specialty occupations. There were declines in the number of residents employed in the manufacturing industry and related occupations. The industrial group that captured the largest numbers of Seattle residents was professional and related services.

NOT INCLUDED

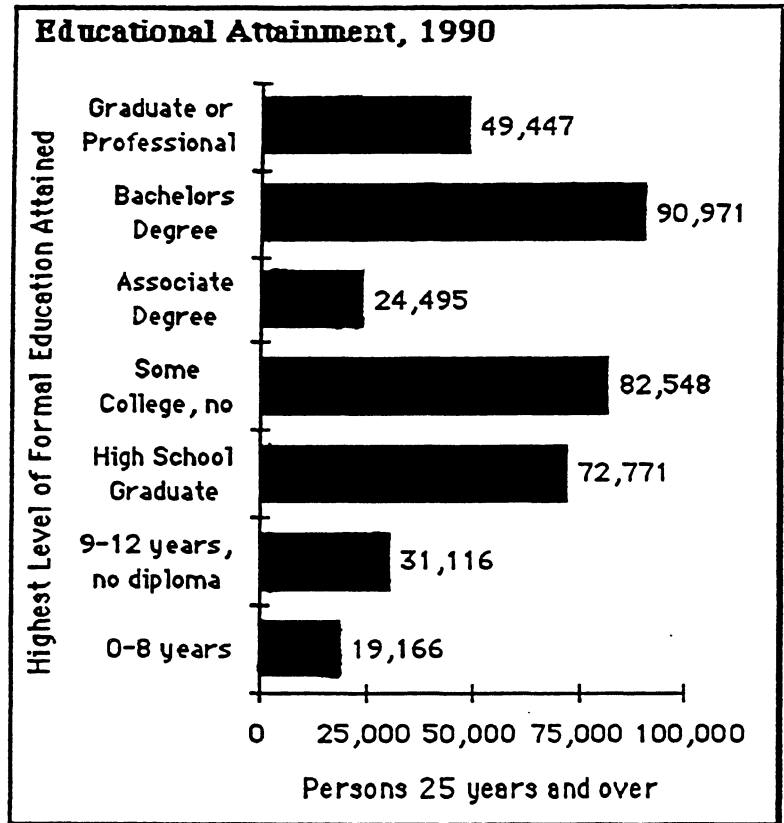

Change in Occupation and Selected Industries, 1980-1990			
(Employed persons 16 years and over living in Seattle)			
	1980	1990	Pct Change
Executive, Managerial, and administrative	28,895	42,558	47.3%
Professional Specialty Technician and related support	42,894	60,498	41.0%
Sales	10,999	13,786	25.3%
Administrative support, including clerical	24,746	32,955	33.2%
Private Household Services	50,142	47,202	-5.9%
Protective Services	1,142	1,245	9.0%
Services, except Household and protective	2,290	2,560	11.8%
Farm, Forest, and Fishing	30,506	32,982	8.1%
Precision production, craft and repair	2,482	3,253	31.1%
Machine operators, assemblers, and inspectors	25,173	19,805	-21.3%
Transportation and material moving	13,413	11,978	-10.7%
Handlers, equip. cleaners, helpers and laborers	8,430	7,474	-11.3%
Total	250,117	284,160	13.6%
Selected Industries:			
Manufacturing	41,143	37,661	-8.5%
Wholesale and retail trade	52,789	57,634	9.2%
Professional and related services	64,621	84,753	31.2%
Other	91,564	104,112	13.7%
Total	250,117	284,160	13.6%

As indicated earlier 4.9 percent of the labor force was unemployed in 1990 reflecting a generally healthy economy. There is variability in the unemployment rate among various groups in society. The unemployment rate for the white population was 3.9 percent compared to 12.4 percent for African Americans and 10 percent for American Indians, Eskimo, and Aleut. The unemployment rate was 5.4 percent for men and 4.4 percent for women. State-wide the unemployment rate was 5.7 percent.

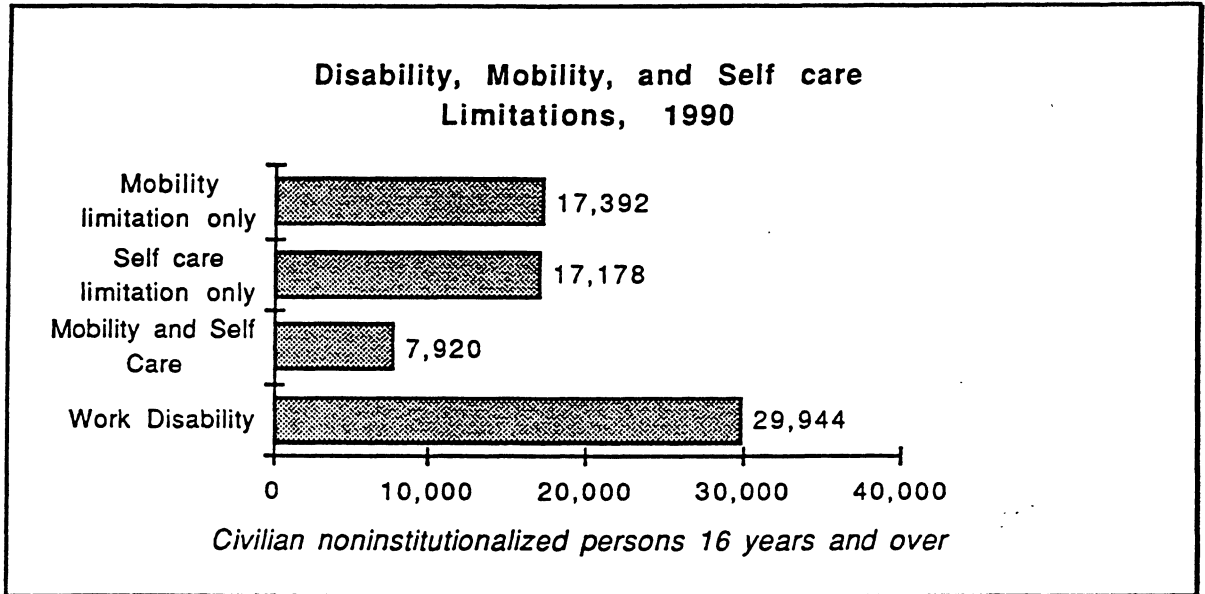

Educational Attainment

Seattle residents have relatively high levels of educational attainment. In 1990, 31 percent of the city's residents 25 years and over had at least a bachelors degree compared to 30 percent in King County and 23 percent state-wide. At the other end of the spectrum there were over 19,000 residents 25 years and over (5.2 percent) with 8 years or less of formal education and over 31,000 (8.4 percent) who attended high school but did not receive a diploma.

Disability

Almost 30,000 people (6.9 percent) 16 years and over report having some type of disability that partially or completely limits their ability to participate in the work force. Other types of disability include mobility and self-care disabilities are reported by 42,490 people (9.8 percent).

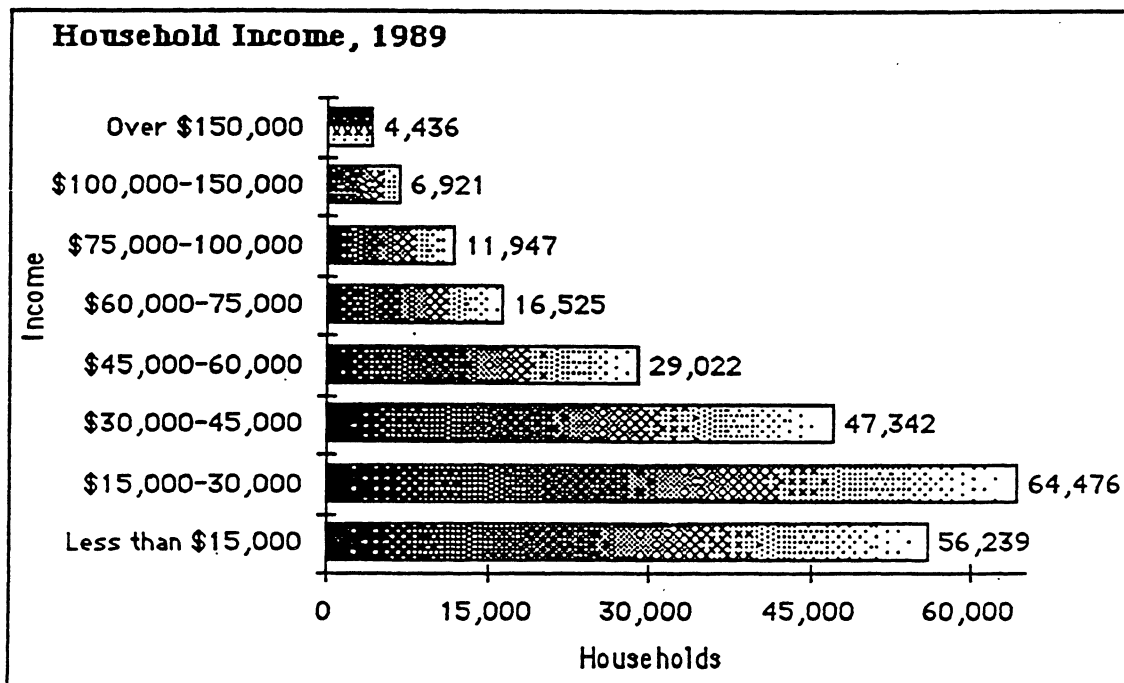

Income and Poverty Status

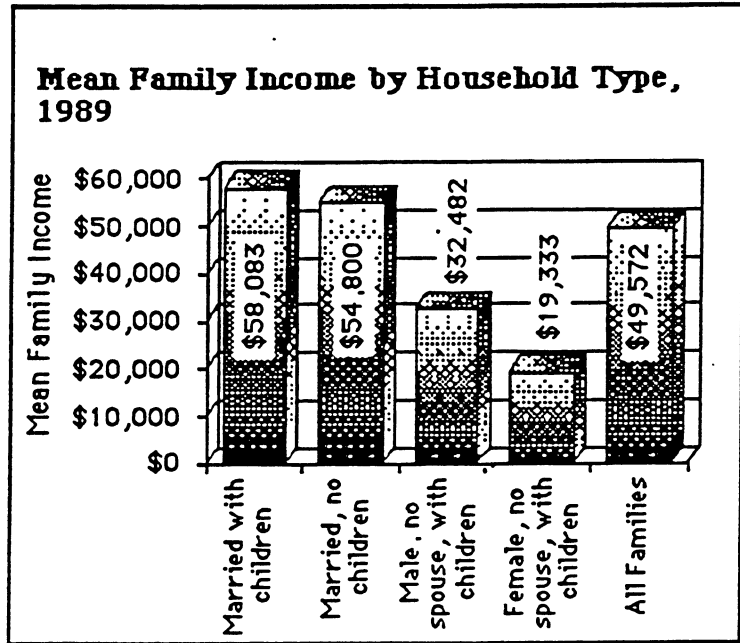

Individuals', households' and families' incomes are related to their employment status, occupations, education levels, types of disabilities and a whole host of other factors.

Overall Seattle has lower incomes than both the county as a whole and the state. In Seattle 56,239 (23.7 percent) households had incomes of less than \$15,000 in 1989 (1990 Census data on income refers to calendar year 1989). Seattle households in the less than \$15,000 income category account for 55 percent of the 102,000 households in that category county-wide.

At the high end of the spectrum, 11,357 (4.8 percent of all households in Seattle) households have incomes over \$100,000. Seattle households in the \$100,000 and over income category account for 31 percent of the households in that category county-wide. Income measures by household are indicative of households' ability to afford housing etc. but vary with household type and number of workers in each household.

The mean income for all households in 1990 was \$38,895. Households made up of single persons and unrelated individuals had a mean income of \$28,005 while family households had a mean income of \$49,572. Among family types there is a great deal of variability in income levels ranging from over \$58,000 for married couples with children to just \$19,000 for female headed households with no spouse present and with children.

Income, 1989	
Households	
Mean Income	\$38,895
Median Income	\$29,353
Families	
Mean Income	\$49,572
Median Income	\$39,860
Non family-Households	
Mean Income	\$28,005
Median Income	\$20,976
Per Capita Income	\$18,308

Per capita income in Seattle was \$18,308 which is comparable to that for all of King County at \$18,587 and higher than per capita income for the entire state which is \$14,923.

'Poverty status' is a measure that helps to understand how many people and families have incomes too low to maintain some level of basic support. The poverty level is based on an estimated dollar amount needed to pay for a basic set of goods and services such as

housing, food, and clothing.

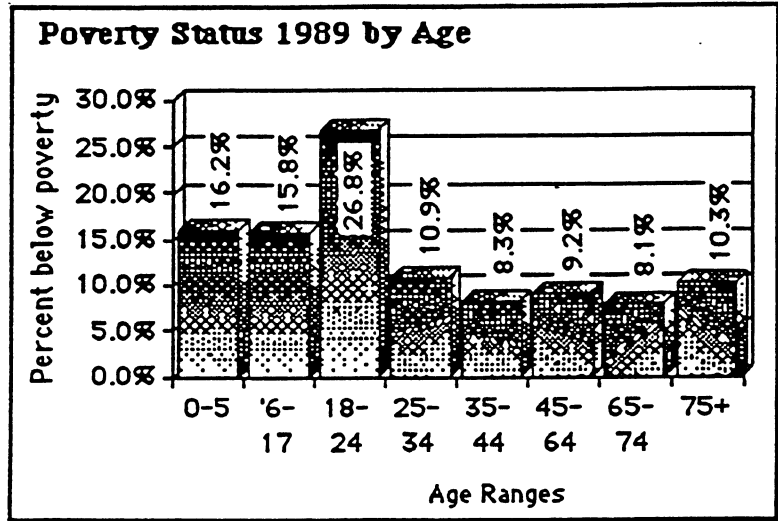

The amount is calculated for families and varies by family size. In 1990, 12.4 percent of Seattle residents lived in poverty. This is up slightly from 11.2 percent in 1980.

The Seattle poverty rate is higher than both state (10.9 percent) and the county (8.0 percent). As with many

other things poverty varies among different segments of the population. Poverty

levels are highest for the youngest residents of the city. The highest poverty rate is for people ages 18 to 24. This is partially explained by the high number of people in this group in school or just starting work with little or no experience and having to rely on low paying entry level employment. There are also relatively high percentages (16 percent) of children under 18 years old living in poverty. The lowest poverty rates are among the

people 35 to 74 years of age reflecting their generally higher education and experience levels.

Income and Poverty by Race, 1989

	Per Capita Income,	Percent Persons Below Poverty Level
White	\$20,645	9.0%
African-American	\$10,503	25.2%
Am. Ind, Eskimo, Aleut	\$10,323	32.9%
Asian and Pac Island	\$11,881	18.9%
Other Race	\$10,152	27.5%
Hispanic Origin	\$14,516	22.3%
Total	\$18,308	12.4%

There is also a great deal of variability among various racial categories in poverty levels and income levels. The white population has a per capita income of over \$20,000 and a poverty rate of just 9 percent which is half of the next racial group with the next lowest

poverty rate. Income among the non-white racial groups varies between \$10,152 for other races to \$14,516 for people of Hispanic origin. Poverty rates vary from 19 percent for Asian and Pacific Islanders to 33 percent for American Indians, Eskimo, and Aleut.

Transportation

One of the issues of highest concern presently on the local and regional agenda is transportation. People see traffic congestion and related air quality as major problems facing the region. One of the main culprits people point to is the group that drives alone to work.

In 1990, over 164,000 (52 percent) employed people 16 years and over drove alone to work. Seattle is a little better than King County as whole with 27 percent of employed Seattle residents riding a bus or carpooling compared to 20 percent county-wide. The 43,511 Seattle residents that ride the bus account for 64 percent of the 67,851 county-wide. However, the 33,057 of us that carpool account for 36

percent of the 91,259 county-wide that carpool. Seattle residents also account for 68 percent of those county-wide who walk to work.

Changes between 1980 and 1990 indicate that our desire for driving alone to work has increased. During the 1980's the number of Seattle residents driving alone increased by over 27 percent while carpooling and bus ridership both

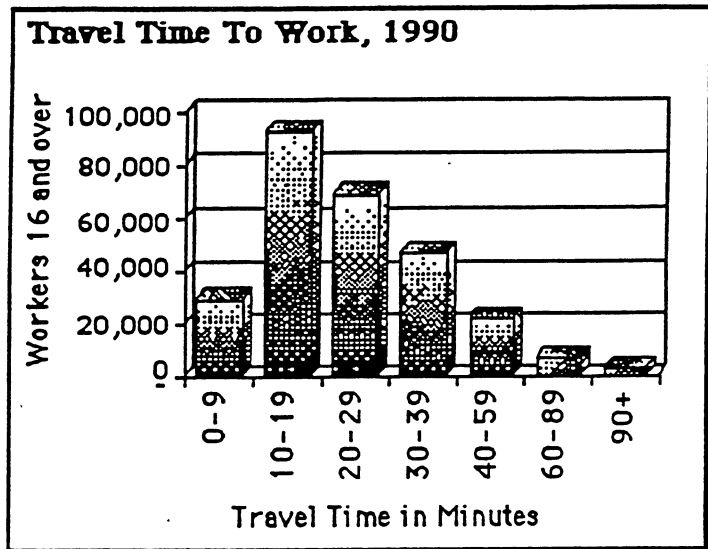

declined. It may be a sign of the times that people working at home doubled from just over 5,000 to 10,734.

Change in Means of Transportation to Work

(Workers 16 years and over)

	1980	1990	Pct Change
Drove Alone	128,992	164,255	27.3%
Carpool	38,861	33,057	-14.9%
Public Bus	47,252	43,607	-7.7%
Walked	19,562	20,250	3.5%
Other	6,900	7,881	14.2%
Worked at home	5,142	10,734	108.8%
Total	246,709	279,784	13.4%

The majority (57.7 percent) of the people who live in Seattle and are employed outside their home spend between 10 minutes and 30 minutes traveling work. There were a lucky 29,000 workers (10.5 percent) who reported traveling under 10 minutes to work. At the other extreme over 9,500 workers (3.4 percent) reported traveling over one hour to work.

Appendix A:

The tables included in appendix A are taken from the 1990 Census Summary Tape File 1a (STF1a). This tape file contains complete count census information from the 'short form' questionnaire. The short form is sent to every housing unit in the country and thus it is called the complete count data.

Table 2: PERSONS BY AGE, RACE, SEX AND HISPANIC ORIGIN
1990 Census of Population and Housing
City of Seattle

Extracted from 100% count data: Summary Tape File 1a

Appendix B:

The tables included in appendix B are taken from the 1990 Census Summary Tape File 3a (STF3a). This tape file contains sample count census information from the 'long form' questionnaire. The short form was sent to 12.6 percent of the housing units in Seattle and thus it is called the sample count data. The short form responses are used to make estimates for the total population. The tables in this appendix are estimates of the total population based on the sample data.
