EXECUTIVE SUMMARY

This Executive Summary summarizes potential environmental concerns related to the planned Burke Gilman Trail extension through Ballard (Seattle), Washington, specifically along Shilshole Ave NW between 17th Ave NW and NW Vernon Place. The Seattle Department of Transportation (SDOT) Burke-Gilman Trail Extension Project (the Project) seeks to complete the missing link between two existing portions of the Burke-Gilman Trail between 11th Ave NW and 30th Ave NW (at the Hiram M. Chittenden Locks) in Seattle. SDOT issued a Determination of Nonsignificance for the project under the State Environmental Policy Act (SEPA) on November 26, 2008, which was appealed. However, the Federal Highway Administration approved the project (STPE-1140 [041]) as a Categorical Exclusion under NEPA on February 26, 2009.

Now, upon remand by the King County Superior Court, SDOT has revised its description of the project to include Shilshole Ave NW between 17th Ave NW and NW Vernon Place in Seattle. This document analyzes the hazardous materials impacts along Shilshole Ave NW between 17th Ave NW and NW Vernon Place and serves as an addendum to the original *Revised Final Hazardous Materials Technical Memorandum dated November 21, 2008*.

Purpose

The purpose of this Discipline Report is to identify potential hazardous materials impacts that may affect a portion of the planned construction of the multi-use Burke Gilman Trail (Trail) extension. This specific Discipline Report focuses on the Shilshole Avenue NW section between 17th Avenue NW and NW Vernon Place (hereafter also referred to as the “Shilshole segment” in this report). Identifying sites that may be sources of contamination prior to construction decreases the possibility of exposing the public and the environment to unidentified substances and can minimize liability to the City of Seattle (City) Department of Transportation (SDOT) with respect to cleanup costs and environmental effects. Identifying and evaluating possible environmental impacts during project planning allows SDOT to identify potential mitigation (avoidance and minimization) measures and effects on the environment.

Project Description

Project construction along Shilshole Ave NW between 17th Ave NW and NW Vernon Place (Shilshole segment) would take place within the existing street right-of-way and would involve the same type of work and improvements involved in project construction for the other portions of the project route. Specifically, all construction along the Shilshole segment would involve removal of existing concrete, asphalt, and compact gravel to be replaced with a 10- to 12-foot-wide multi-use pathway; additional improvements such as railway crossings, stormwater drainage controls, relocation of underground utilities, and reconstruction of existing driveways; and installation of traffic controls, warning signs, and signals to direct motor-vehicle, bicycle, and pedestrian traffic.

Study Area

The study area is located in the Ballard neighborhood of Seattle, Washington between 17th Avenue NW and NW Vernon Place as shown on the Vicinity Map, Figure 1. The project footprint is located within the publicly owned right-of-way (ROW) running east to west along Shilshole Avenue NW. The

study area encompasses a 1-mile radius centered around the proposed footprint of the Shilshole segment of the Trail.

The study area, like the study area of the 2008 report, has historically been used for industrial and commercial purposes since at least the late 1800s and is currently heavily developed for commercial, retail and industrial use. The study area is located on the north shore of Salmon Bay and the site soil generally consists of fill overlaying interbedded clays, silts and sands that are overlying glacial till.

Studies and Coordination

The preparation of this Hazardous Materials Discipline Report included research pertaining to historical land use, regulatory agency database list and file reviews, and a site reconnaissance from City of Seattle street ROW (referred to as a windshield survey) of the properties that may be affected by the planned construction of the Trail along the Shilshole segment. A site screening process was developed and implemented as part of this hazardous materials discipline study to identify properties with known or suspected hazardous material-related issues to focus the analysis on properties that could affect the Trail design or construction. The regulatory database review and the observations made during the site reconnaissance (aka windshield survey) were used to identify potential sites of concern both within and adjacent to the planned Trail alignment, and upgradient, with respect to groundwater flow, of the project site. Historical research was completed to evaluate land use over the past 100 years in those areas of concern as identified by the regulatory database review and the windshield survey. The historical research of land use included review of aerial photographs, Polk City Directories, Sanborn Fire insurance maps, historical topographic maps and historic archives.

Potential Sites of Concern

As requested by SDOT, we contracted with Environmental Data Resources (EDR) for an updated regulatory database list search for a one-mile radius surrounding the entire 11th Avenue NW to the Ballard Locks portion of the Burke Gilman Trail Corridor Project for comparison with the list search report for the 2008 study. A total of 109 regulatory-listed sites were identified on the EDR report (there were 110 sites identified in the 2008 study). Of those 109 sites, 90 sites were eliminated from further consideration because they were either downgradient from the planned Shilshole Avenue NW alignment with respect to groundwater flow, too far away from the planned alignment or did not appear to pose significant potential for hazardous material-related risks. We note that while the EDR database search included the entire 11th Avenue NW to the Ballard Locks portion of the Trail Corridor Project, this report only includes review of listed sites relevant to the Shilshole segment. While discussion of the majority of the regulatory-listed sites identified on the EDR report did not change significantly from the 2008 report, “No Further Action” status was rescinded by Ecology for two identified sites, located more than a block from the alignment; we reviewed Ecology files for these two sites and determined that these two sites do not appear to present a potential to impact the project alignment or change the conclusions of the previous reports. No property acquisition is planned for the portion of the project along the Shilshole segment, so all sites identified below are either adjacent to or upgradient from Shilshole Avenue NW.

Sites Identified for Detailed Analysis

Nineteen sites were identified in the vicinity of the Shilshole section for additional review and analysis. For each of the nineteen sites, the probable extent of contamination was assessed to evaluate the likelihood that the site could impact the project area. Each site was assigned a risk level, ranked as potential “high impact”, “moderate impact”, or “low impact” per WSDOT (2009) “Guidance and Standard Methodology for WSDOT Hazardous Materials Discipline Reports”¹.

- **High Impact.** None of these nineteen sites identified is considered to be a potential “high impact” site per the WSDOT guidance definition.
- **Moderate Impact.** One of the nineteen sites, Cowman Campbell Paint Company (also known as C&C Paint located at 5221 Ballard Avenue NW) is considered to be a potential “moderate impact” site per the WSDOT definition.
- **Low Impact.** The remaining eighteen sites are considered to be potential “low impact” sites.

The eighteen low impact sites consist of gas stations, oil distribution facilities, businesses with underground storage tanks (USTs), automotive facilities, a sand and gravel facility, and other commercial and/or industrial operators. The one moderate impact site identified during this study is summarized below:

COWMAN CAMPBELL PAINT COMPANY SITE (MODERATE IMPACT POTENTIAL)

A gasoline-contaminated groundwater plume associated with the Cowman Campbell site extends beneath the north side of Shilshole Avenue NW. Although the full extent of the plume is unknown, there is a potential for the contaminant plume from the Cowman Campbell site to extend beneath the planned Trail alignment. The current subsurface condition and recent environmental work at the property, if any, is unknown. The most recent groundwater monitoring information available dates to 2003. As of that date, groundwater containing concentrations of gasoline-range hydrocarbons and xylenes above Model Toxics Control Act (MTCA) Method A cleanup levels appeared to be decreasing in lateral extent, but continued to extend beneath the north side of the Shilshole Avenue right-of-way. Cowman Campbell groundwater monitoring wells are located along the north side of Shilshole Avenue NW, adjacent to the Shilshole segment. Based on the contaminant type (petroleum hydrocarbons), width of the right-of-way (more than 50 feet), and that as of 2003 one of the Cowman Campbell monitoring wells along the north side of the right-of-way still contained concentrations of petroleum hydrocarbons above applicable MTCA Method A cleanup levels, it is possible that the contaminant plume is limited to the north side of the right-of-way and does not extend the full width of the Shilshole Avenue NW right-of-way. But, this conclusion cannot be confirmed without additional data (or more current information). We

¹ Per the 2009 “Guidance and Standard Methodology for WSDOT Hazardous Materials Discipline Reports”, high impact sites are identified “if a known concern exists regarding historical activities, contamination is known and extensive, and/or the site will likely impact the project”. In general, high impact sites are properties that possess a potential for substantial soil, groundwater, or sediment contamination. Moderate impact sites are identified “where concern exists because of historical activities and/or the site may likely impact the study area but sufficient evidence is not available.” Low impact sites are identified “where a potential concern exists because of historical activities, but either the likelihood for the site to impact the project is low or contamination was previously remediated.”

contacted the Cowman Campbell Paint Company property owner (Brett Cowman) on multiple occasions, but he was unavailable at the time that this report was prepared.

Potential Impacts from High, Moderate and Low Impact Sites

There is the potential to encounter impacted groundwater and/or soil along the majority of the Shilshole section, similar to the other portions of the route, due to the history of industrial activities in the area and/or existing site uses.

The contaminants of concern that could potentially be encountered during Trail construction at or adjacent to the 19 sites of concern identified during this study may include soil and/or groundwater impacted by petroleum hydrocarbons, volatile organic compounds, non-halogenated solvents, halogenated organic compounds, polychlorinated biphenyls, polycyclic aromatic hydrocarbons, cyanide and/or metals. Additionally, other contaminants, such as metals and semi-volatile organic compounds may also be associated with petroleum hydrocarbon impacted sites.

During construction, an uncontrolled hazardous substance could be encountered and potentially released to the environment by ground-disturbance or dewatering activities. For example: 1) in areas with known contamination, 2) in areas where recorded activities such as hazardous waste generation or fuel storage in USTs have the potential to affect soils or groundwater, or 3) in other areas not identified in the environmental database search. In such cases, and similar to potential effects along other portions of the Trail route, the possible environmental effects could include the following:

- Potential release of contaminant air emissions (dust and volatile organic compounds), soil, sediment, surface water and groundwater during construction.
- Potential alteration of contaminated groundwater plume(s) and generation of contaminated water during dewatering activities.
- Potential alteration of contaminated migration pathways due to excavation and other construction activities.
- Human health and the environment could potentially be affected if contamination is not managed properly in accordance with existing regulations.

Another effect common to construction activities would be the accidental release (e.g. equipment fuel and oil spills) of a hazardous substance during construction. Cleaning up material and disposing of it could add more time and costs to construction operations and large spills of hazardous materials could also require emergency response agency intervention.

In addition to management of contaminated soil and groundwater encountered during construction, there also may be environmental legal liability issues related to property ownership. Although we understand that no property will be acquired for this portion of the project, it was noted in the 2008 Hazardous Materials report that SDOT will be responsible for remediating and monitoring any contamination found on properties acquired for the Project.

Construction activities have the potential to impede future cleanup by liable parties on adjacent or upgradient properties if the project elements are permanent or difficult to remove. SDOT could incur liability for the cleanup of these sites if project elements impeded a future cleanup. However, most of the project features are such that they would be able to be readily removed and replaced should there be a need to conduct a cleanup beneath the site associated with adjacent or upgradient properties.

Any structures needing demolition should be assessed for the presence of lead based paint, asbestos and/or other contaminants of concern prior to demolition to insure proper handling and disposal of associated wastes. Potential release of asbestos-containing materials or lead-based paint during the removal of structures could have an effect on worker health and safety, human health and the environment.

Roadway stripping and repaving and any clearing associated with construction staging areas may temporarily increase pervious surfaces in the area and may also temporarily create areas sensitive to erosion. This could result impacts to stormwater at the site. Best Management Practices (BMPs) such as silt fences, hay bales, etc. should be employed to minimize the impacts of these activities on the surrounding properties and Salmon Bay to the south.

Potential Mitigation Measures

There always exists the potential for unavoidable negative effects to arise during construction activities. Specific mitigation measures for unavoidable negative effects at sites identified as high impact and moderate impact will include:

- Air monitoring for volatile organic vapors;
- Having proper personal protective equipment available on site should hazardous vapors be encountered (i.e. respirators); and
- Training workers in the proper procedures to identify, characterize, handle and dispose of hazardous materials encountered in accordance with applicable rules and regulations.

General mitigation measures that will be taken throughout the project site to control, mitigate, or eliminate any possible potential effects include the following. SDOT will handle all impacted material encountered during construction in accordance with all applicable rules and regulations and will utilize best management practices as described in the project specific construction plans and specifications. Environmental regulations, applicable for both the Shilshole segment and other areas of the Trail alignment, require the following:

- Appropriate management techniques for contaminated media such as soil or groundwater.
- Strict control and management of hazardous wastes.
- Appropriate transportation of hazardous substances.

Additionally SDOT will implement the following practices:

- Impacted soil and groundwater that may be encountered at the site will be properly characterized, handled and disposed in accordance with all applicable rules, regulations and discharge approvals.
- Construction activities will be phased in concert with any needed cleanup activities to avoid contaminated areas and will be planned to minimize disturbance to the subsurface to prevent the transport of contaminants to uncontaminated areas.
- Best management practices will be implemented in order to protect against hazardous material spills from routine equipment operation during construction.
- SDOT will identify any utilities that need to be relocated or protected prior to start of construction.
- Workers will be trained in the proper identification, handling and disposal of contaminated media; the proper procedures should accidental spills of hazardous materials occur; and in procedures to prevent hazardous material from migrating offsite and coming into contact with the general public (e.g., via erosion or dust control problems).
- SDOT will require the construction contractor to prepare a worker Health and Safety Plan that will minimize the effects of identified and unanticipated hazardous substance impacts from contaminated soil and groundwater on worker and public health and safety.
- SDOT will also require the construction contractor to prepare and implement a Spill Prevention Control and Countermeasure plan to minimize or avoid effects hazardous materials will have on soil, surface water and groundwater should a spill occur.

Potential Costs

This Executive Summary presents a range of costs for preliminary site investigations and excavation and disposal of impacted material. More detailed cost estimates are discussed in the Discipline Report. Further investigation (e.g., Phase I/II ESAs, asbestos and lead based material studies, and pre-construction sampling) could be necessary to provide more accurate cost estimates for any cleanup, worker safety and/or construction impacts.

Should SDOT decide to conduct further investigations of identified sites of concern adjacent to or upgradient from the Trail alignment, or for due diligence purposes prior to potential property acquisition, the following cost estimates may be used as a reference. These costs can vary dramatically based on the historic and current land use of a site, the size of the site and the type of land use on adjacent sites (e.g., industrial versus residential site uses).

- The average cost of a Phase I Environmental Site Assessment can range from approximately \$5,000 to \$10,000 per site.
- The cost of a Phase II Environmental Site Investigation can cost, on average, approximately \$25,000 per site but can be much higher depending on the magnitude of the study and contaminants of concern.

Should impacted material be encountered within the proposed Project alignment, the following general cost estimates can be used for planning purposes. However, a Project specific cost

estimate will be required in order to accurately budget for excavation and/or disposal efforts that may be completed if SDOT encounters contaminated materials within the Project alignment.

The estimated cost for excavation and disposal of contaminated soil includes:

- excavation, temporary on-site storage and replacement of overburden soils that need to be removed to access the underlying contaminated soil (where applicable) - \$12 per cubic yard;
- excavation and handling of contaminated soil - \$6 per cubic yard;
- transportation and tipping fees for disposal of contaminated material at an appropriate upland facility - \$40 per ton (as stated previously, this cost estimate could be much higher [\$180 to over \$240/ton] if media is deemed dangerous waste);
- restoration of the contaminated zone by backfilling with imported granular soil - \$8 per cubic yard for material and \$6 per cubic yard for placement; and
- Disposal and treatment of dewatering water - \$2 per gallon (as stated previously, this cost estimate could be much higher if water is deemed dangerous waste).
- The cost of groundwater classified as dangerous waste ranges from \$0.80 to \$1.16 per gallon when the groundwater is delivered in bulk quantities or approximately \$179 per drum if delivered in drums. These estimated costs include transportation and disposal fees.

Excavation and disposal estimates of this nature generally have an accuracy of ± 50 percent. Costs associated with mobilization, site preparation, dewatering of the excavation and contaminated material, analysis of the dewatering water, utility and pavement replacement and other site restoration are NOT included in the estimates provided.

INTRODUCTION

This document provides an analysis of the hazardous materials impacts along Shilshole Ave NW between 17th Ave NW and NW Vernon Place and serves as an addendum to the original Revised Final Hazardous Materials Technical Memorandum dated November 21, 2008.

Project Description

What is the Shilshole Avenue 17th Avenue NW to Vernon Place NW Option of the 11th Avenue NW to Ballard Locks – Burke Gilman Trail Corridor Project?

The Seattle Department of Transportation (SDOT) Burke Gilman Trail Extension Project (the Project) seeks to complete the missing link between two existing portions of the Burke Gilman Trail between 11th Ave NW and 30th Ave NW (at the Hiram M. Chittenden Locks) in Seattle. SDOT issued a Determination of Nonsignificance for the project under the State Environmental Policy Act (SEPA) on November 26, 2008, which was appealed. However, the Federal Highway Administration approved the project (STPE-1140(041)) as a Categorical Exclusion under NEPA on February 26, 2009.

Now, upon remand by the King County Superior Court, SDOT has revised its description of the project to include Shilshole Ave NW between 17th Ave NW and NW Vernon Place in Seattle. This document analyzes the hazardous materials impacts along Shilshole Ave NW between 17th Ave NW and NW Vernon Place (hereafter also referred to as the “Shilshole segment” in this report) and serves as an addendum to the original *Revised Final Hazardous Materials Technical Memorandum* dated November 21, 2008.

What are the Proposed Project Improvements?

Project construction along Shilshole Ave NW between 17th Ave NW and NW Vernon Place would take place within the existing street right-of-way and would involve the same type of work and improvements involved in project construction for the other portions of the project route. Specifically, all construction along Shilshole Ave NW between 17th Ave NW and NW Vernon Place would involve removal of existing concrete, asphalt, and compact gravel to be replaced with a 10- to 12-foot-wide multi-use pathway; additional improvements such as railway crossings, stormwater drainage controls, relocation of underground utilities, and reconstruction of existing driveways; and installation of traffic controls, warning signs, and signals to direct motor-vehicle, bicycle, and pedestrian traffic.

Background

Why Are We Considering Hazardous Materials as Part of This Study?

Identifying potentially contaminated sites prior to construction is important for the purpose of decreasing the possibility of exposing the public and the environment to unidentified substances. Hazardous materials include any material that may pose a threat to human health or the environment because of its quantity, concentration, or physical or chemical characteristics. This information can also help to minimize liability posed to SDOT with respect to cleanup costs and environmental effects, particularly where property acquisition may occur.

Identifying and evaluating possible effects during Project planning allows SDOT to identify mitigation (avoidance and minimization) measures and effects on the environment. Possible measures include changes in alignment, identifying areas requiring additional investigation before right-of-way acquisition and measures that reduce environmental effects and associated costs. The methodology used to conduct this analysis is included as Appendix A and is the same as used for the 2008 report.

The handling of any potential hazardous materials will be governed in compliance with the following policies, guidance, and laws:

POLICIES, GUIDANCE AND LAWS

- Clean Air Act (CAA), Chapter 70.94 RCW.
- Clean Air Act (CAA), 42 USC 7401 et seq.
- Clean Water Act (CWA), 33 USC 1251 et seq.
- Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), 42 USC 9601 et seq.
- Dangerous Waste Regulation, Chapter 173-303 WAC.
- Endangered Species Act (ESA), 7 USC 134, 16 USC 460 et seq.
- Federal Highway Administration, Technical Advisory T6640.8A (1987), Supplementary Hazardous Waste Guidance (1997), and Hazardous Wastes in Highway Rights-of-Way (1994).
- Hazardous Waste Management Act, Chapter 70.105 RCW.
- Model Toxics Control Act (MTCA), Chapter 70.105D RCW.
- Occupational Health Standards, WAC 296-62.
- Occupational Safety and Health Act (OSHA), 29 USC 651 et seq.
- Resource Conservation and Recovery Act (RCRA), 42 USC 321 et seq.
- Safe Drinking Water Act, 42 USC 300(f) et seq.
- Small Business Liability Relief and Brownfields Revitalization Act.
- Solid Waste Management Act, Chapter 70.95 RCW.
- Toxic Substances Control Act (TSCA), 15 USC 2601 et seq.
- Underground Storage Tanks (UST), Chapter 90.76 RCW.
- U.S. Department of Transportation, Chapter 49 CFR.
- Washington Industrial Safety and Health Act (WISHA).
- Water Pollution Control Act, Chapter 90.48 RCW.
- WSDOT Environmental Procedures Manual (EPM), Section 447.
- WSDOT Local Agency Guidelines (LAG) Manual.

We collected information for this Discipline Report by reviewing previous environmental reports completed within the Shilshole segment, reviewing publicly available environmental records and databases, identifying historical land uses, identifying the groundwater flow direction, and conducting a windshield survey to identify sources of hazardous materials. The methodology to conduct this analysis is similar to that used in the 2008 report, and is detailed and included as Appendix A.

The Project area specifically evaluated for environmental effects included the area within ½ mile of the Shilshole segment. This Discipline Report identified hazardous material sites adjacent to and upgradient from the Shilshole segment. Further investigations, including Phase I and Phase II ESAs, are recommended for any parcels identified in this memorandum that are to be acquired for the Shilshole segment.

Baseline Conditions

What is the Natural Environment of the Project Area?

The Project area (the area within ½ mile of the Shilshole segment as described above) is located along the north shoreline of Salmon Bay, which connects to the Puget Sound via the Hiram M. Chittenden Locks. The Project area is relatively flat and the topography slopes downward toward Salmon Bay to the south-southwest. The Project alignment ranges in elevation between 5 feet and 15 feet above mean sea level.

The Project area is part of the Puget Sound Lowland formed by past glaciations. The geology of the Project area generally consists of fill overlaying interbedded clays, silts and sands that are overlying glacial till. Fill encountered in the area generally consists of gravel, sand, silt, wood debris, concrete fragments and glass fragments. The fill encountered in the area ranges in thickness from approximately 3 feet to 10 feet thick. The native soil encountered in the Project area consists of hard silts and sands interpreted to be glacial till.

Groundwater in the Project area has been encountered during previous studies at depths ranging from 2 feet to 12 feet beneath ground surface. The direction of groundwater flow in the Project area is interpreted to flow to the south-southwest towards Salmon Bay based on the topography of the area. Surface water in the area also generally flows to the south southwest where it is not controlled by on-site stormwater systems and/or municipal drains.

What is the Land Use in the Project Area?

The Ballard neighborhood of Seattle, including the proposed Trail alignment and the area around the proposed alignment, has been occupied by various industrial and commercial facilities for more than one hundred years. Ballard became a center of the timber industry in the late 1800's and the area was occupied by several mills and shingle manufacturers. Shipping became a major commercial enterprise in the Ballard area in the years after World War I. Since then, facilities including bulk oil facilities, sand and gravel facilities, asphalt plants, boat yards, salvage yards, dry cleaners and automobile wrecking yards have occupied the properties around and upgradient from the Project area.

Much of the Ballard neighborhood is now occupied by clothing boutiques, restaurants, bars, condominiums and town homes. However, many industries (including sand and gravel facilities, boat yards, fuel transfer facilities, etc.) still remain along the shoreline of Salmon Bay and along the planned Project alignment.

Are There Contaminated Sites of Concern in the Project Area?

Various properties adjacent to and upgradient from the planned Burke Gilman Trail Corridor, including the Shilshole segment, have been used for industrial and commercial purposes during the last one hundred years. The potential for encountering hazardous materials exists along most of the Project alignment, either due to the adjacent site's history or existing conditions.

The Project area contains hazardous materials and nineteen sites of concern in the vicinity of the Shilshole segment. The sites of concern generally include known and suspected contaminated sites (current and historic), sites that have (current and historic) underground storage tanks (USTs) and/or leaking underground storage tanks (LUSTs).

The following sections provide more information about the analysis of the Project area and discuss the identified sites of concern. For each of the sites retained for in-depth analysis, the probable extent of contamination related to planned project work was assessed to evaluate the likelihood that the site could impact the project area. Each of the sites was assigned a risk level based on planned acquisition and excavation work and ranked as potentially a "low impact," "moderate impact" or "high impact" in general accordance with the 2009 WSDOT "Guidance & Standard Methodology for WSDOT Hazardous Material Discipline Reports."² The risk evaluation also included assessment of the level of complexity (straightforward or complex) that any mitigation measures associated with each site may have upon the project; levels of complexity for each site is determined based on the anticipated size of the impact area, the relative toxicity and quantity of contaminants, and difficulty of cleanup remedies, per the 2009 WSDOT guidance. The complexity of impact for each site is presented in Tables 1, 2, and 3 below.

Where are the Properties That Are Potentially High Impact?

Potential high impact risk level sites are properties that have a potential for substantial soil, groundwater, or sediment contamination based on known concerns because of historical activities, known contamination, and/or likely impacts to the Project Area. Potential high impact sites may be contaminated over a large area by a single contaminant or over a small area by multiple contaminants and are typically large or have large volumes of contaminated materials, have a long history of industrial or commercial land use., and the contaminants are persistent, difficult or expensive to manage.

² Per the 2009 "Guidance and Standard Methodology for WSDOT Hazardous Materials Discipline Reports", high impact sites are identified "if a known concern exists regarding historical activities, contamination is known and extensive, and/or the site will likely impact the project". In general, high impact sites are properties that possess a potential for substantial soil, groundwater, or sediment contamination. Moderate impact sites are identified "where concern exists because of historical activities and/or the site may likely impact the study area but sufficient evidence is not available." Low impact sites are identified "where a potential concern exists because of historical activities, but either the likelihood for the site to impact the project is low or contamination was previously remediated."

No potential high impact sites were identified in the Project area.

Where are the Properties That Are Potentially Moderate Impact?

Moderate impact sites are those where concern exists based on historical activities, and/or the site may likely impact the study area based on available evidence of a release to soil and/or groundwater, but sufficient evidence is not available.

One moderate impact property was identified in the Project area as described in Table 1 below, and as shown on Figure 3.

TABLE 1. ONE MODERATE IMPACT PROPERTY

Map ID Number (EDR ID Number)	Site (Address)	Complexity of Impact	Rationale
1 (41)	Cowman Campbell Paint Co (5221 Ballard Avenue NW)	Straightforward	<p>Adjacent to alignment; listed as RCRA CESQG, LUST, FINDS, ICR with petroleum hydrocarbon contaminated soil and groundwater and interim cleanup report dated 1190s to 2003.</p> <p>Information obtained from Ecology files included the following:</p> <ul style="list-style-type: none"> ■ The Cowman Campbell (C&C) Paint Company facility consists of several buildings and parcels on the north portion of the block extending between Ballard and Shilshole Avenues. C&C Paints has been operational at this location since the 1940s. ■ Twelve USTs have been located at the property. The USTs ranged in size from 300 gallons to 8,000 gallons and variously contained kerosene, naphtha, xylol, ethylene and propylene glycol, mineral spirits, resins, heating oil, and diesel. As of 2003, all USTs had either been removed or closed in place. Some excavation of contaminated soil was conducted in the vicinity of the removed USTs; however, not all contaminated soil could be removed due to the close proximity of building foundations. Additionally, some amount of diesel-contaminated soil from nearby Salmon Bay Sand & Gravel was used as backfill for the UST excavation. ■ 10 monitoring wells were installed at the site in the 1990s. Several of these wells are located in the Shilshole Avenue right-of-way. Soil and groundwater samples from the monitoring wells indicated the presence of free product and gasoline and BTEX compounds at concentrations above cleanup levels.

Map ID Number (EDR ID Number)	Site (Address)	Complexity of Impact	Rationale
			<ul style="list-style-type: none"> <li data-bbox="792 310 1360 625">■ A plume of contaminated soil and groundwater extends westward beyond property boundaries beneath the Shilshole Avenue right-of-way. According to Ecology's notes, the affected area could consist of 10,000 square feet at a depth extending from near-surface to approximately 6 feet below ground surface. The nearby presence of subsurface utility sewer and water lines may be providing a migration pathway for subsurface contamination. <li data-bbox="792 646 1360 800">■ In 2001 and 2002, oxygen releasing compound (ORC) was placed in affected monitoring wells in an attempt to increase bioremediation. Petroleum product removal was attempted via skimmer pump in some wells. <li data-bbox="792 821 1360 1066">■ As of 2003, the most recent year for which data is included in Ecology files, detected gasoline and xylene concentrations in groundwater samples from one Shilshole Avenue monitoring well (MW-1) remained above applicable MCTA cleanup levels. During the 2003 sampling event, depth to water in MW-1 was 4.88 feet below ground surface. <li data-bbox="792 1087 1360 1276">■ Site data newer than 2003 was not included in the Ecology file. None of the past sampling data available indicates that site soil and groundwater has previously been analyzed for any solvents other than BTEX associated with gasoline.

COWMAN CAMPBELL SITE

The groundwater contaminant plume associated with the Cowman Campbell site extends beneath the north side of Shilshole Avenue NW. Full extent of the plume is unknown and there is a potential for the contaminant plume from the Cowman Campbell site to extend beneath the planned Shilshole segment alignment. The most recent groundwater monitoring information available in Ecology files dates to 2003; as of that date, groundwater containing concentrations of gasoline-range hydrocarbons and xylenes above MTCA Method A cleanup levels appeared to be decreasing in lateral extent, but continued to extend beneath the north side of the Shilshole Avenue right-of-way. We attempted to contact the current owner of the Cowman Campbell property regarding the availability of more recent sampling data beneath the right-of-way; the property owner has not yet responded to our requests for information. Cowman Campbell groundwater monitoring wells are located along the north side of Shilshole Avenue NW, adjacent to the planned Shilshole segment alignment in this area.

Which Properties are Potentially Low Impact?

Sites are identified as low impact risk level when a potential concern exists because of historical activities, but either the likelihood for the site to impact the project is low, evidence of a release to soil and/or groundwater was not identified, or the contamination was previously remediated.

The locations of the low impact sites are shown on Figure 3. Eighteen low impact sites were identified adjacent to or upgradient from the Project alignment as described in Table 2 below.

TABLE 2. EIGHTEEN LOW IMPACT PROPERTIES

Map ID Number (EDR ID Number)	Site (Address)	Complexity of Impact	Rationale
2 (NA)	Seattle Cedar Lumber Manufacturing (4735 Shilshole)	Straightforward	Adjacent to alignment; Historic use as a timber mill and lumber manufacturing facility. Ecology does not maintain a file for this address or facility.
3 (46)	Covitch Williams Sales Office (4800 Shilshole)	Straightforward	Covitch Williams owns several sites in the immediate vicinity of the subject property. The 4800 Shilshole address references the office and warehouse building. This address is listed as FIFRA/TSCA Tracking System (FTTS) and FINDS. Ecology does not maintain a file for this address.
4 (46)	Covitch Williams Dock Office (5219 Shilshole)	Straightforward	Covitch Williams owns several sites in the immediate vicinity of the subject property. This Covitch Williams address references the Dock Office and bulk storage facility located immediately adjacent on the west side (downgradient) of Shilshole. This address is listed as RCRA-NonGen, FINDS, and for multiple spills occurring during dock fueling activities (downgradient of alignment). The tank farm at this address consists of four upright petroleum ASTs that range in size from 14,000 gallons to 29,850 gallons. The four tanks were constructed in the 1920s and the facility has operated as a bulk storage and marine fueling facility for a variety of fuel companies since construction. Ecology files for this address consist only of spill prevention and related plan documents. No subsurface assessment or cleanup documents were included in the Ecology file.
5 (NA)	Covich Williams Additional Space (5109 Ballard Avenue NW)	Straightforward	Upgradient from alignment off Ballard Avenue; site has been a fuel yard for at least 50 years. 5 upright ASTs in concrete secondary containment were observed on site (contents unknown) and dozens of 55-gallon drums on pallets were observed both inside and outside the building. Most 55-gallon drums appear to be in good condition except for 6 drums (contents unknown) which are dented, rusted and appear to be in poor condition sitting on a pallet on the asphalt outside of the building. Ecology does not maintain files for this address.

Map ID Number (EDR ID Number)	Site (Address)	Complexity of Impact	Rationale
6	Salmon Bay Center (5301 - 5309 Shilshole Avenue)	Straightforward	<p>Adjacent to alignment and downgradient; listed as CSCSL with petroleum products, non -halogenated solvents, metals and cyanide treated, removed or contained in surface water. PAH and petroleum hydrocarbons confirmed in soil. Metals and cyanide confirmed (petroleum hydrocarbons and PAHs suspected) in sediment.</p> <p>Ecology files indicate the following information: TPH-D and TPH-oil were noted in site soil in a 1999 Ecology letter and the site is listed under a Restrictive Covenant.</p> <p>A 2006 Ecology letter states that further action is required at the site in order to obtain NFA status.</p>
7 (39)	CD Stimson Co, Salmon Bay Tech Center/Tri Graphics Inc. (5305 Shilshole Avenue)	Straightforward	<p>Adjacent to alignment; listed as ICR, FINDS, RCRA-LQG with petroleum hydrocarbon contaminated soil; ICR submitted in 1997. An Ecology site file was not available at the time of the review. The site is listed as inactive under the UST program on the Facility Site Identification website.</p>
8 (39)	Honeywell Inc. Shilshole/Trident Seafoods/Trident Akutan Bulk fuel storage (5303 Shilshole)	Straightforward	<p>Adjacent to alignment; Listed as RCRA - SQG, FINDS, Comprehensive Environmental Response, Compensation (CERC), No further remedial action planned (NFRAP), FTTS, above ground storage tank (AST) with various spills of petroleum hydrocarbons into Salmon Bay and 5 diesel ASTs on site.</p>
9 (NA)	Stinson Mill Auto Service (5260 Shilshole)	Straightforward	<p>Adjacent to alignment; Historic use as an auto service facility. Gas tank shown near intersection on historic map. Site is currently gravel-surfaced parking lot. Ecology does not maintain a file for this address or facility.</p>
10 (46)	Salmon Bay Sand and Gravel (5231 Shilshole)	Straightforward	<p>Adjacent to alignment; Listed as FINDS, National Pollutant Discharge Elimination System (NPDES) and an underground storage tank (UST) site. Two USTs, (a gasoline UST of less than 5,000 gallon capacity and a diesel UST of less than 20,000 gallon capacity) were removed from the site in 1988. No detailed UST closure or assessment information was included in the Ecology file. The facility has been subject to several NPDES violations for the release of surface runoff into state surface waters between 2006 and 2009.</p>
11 (46)	Marco Shipyards (5228 Shilshole Ave NW)	Straightforward	<p>Adjacent to alignment; Listed only as SPILLS with various spills of petroleum hydrocarbons into Salmon Bay. Ecology files for this site consist only of NPDES documents. The site has had NPDES violations for stormwater runoff exceeding allowable effluent limits of oil and grease.</p>

Map ID Number (EDR ID Number)	Site (Address)	Complexity of Impact	Rationale
12 (NA)	Former Battery Manufacture (5212 Shilshole)	Straightforward	Adjacent to alignment; Existing building historic use as battery manufacture, currently a warehouse for Salmon Bay Sand & Gravel. Ecology does not maintain a file for this address or facility.
13 (46)	Sagstad Marina (5109 Shilshole)	Straightforward	Adjacent to alignment; Listed as RCRA – NonGen, FINDS, Confirmed and Suspected Contaminated Sites List No Further Action (CSCSL NFA), UST, Manifest, and Independent Cleanup Report (ICR). In April 1990, four fuel USTs (gas and diesel) were removed from an area south of the restaurant building. Petroleum contaminated soils excavated from the site were both disposed of off-site and were used as backfill on site. PCS reused on-site was treated with in-situ remediation and was considered cleaned up after several rounds of groundwater monitoring in the affected area were non-detect for petroleum and benzene. In 2005, additional contaminated soil was removed from a former wood shop area.
14 (51)	Dearmand Property (5107 Ballard Avenue NW)	Straightforward	Upgradient from alignment; Listed as CSCSL NFA, FINDS, VCP with groundwater and soil impacted by petroleum hydrocarbons. This site was historically an auto repair facility. Petroleum contaminated soil was excavated and removed from the site in 2004. Following several rounds of groundwater sampling in which groundwater samples did not contain detectable concentrations of contaminants, the site was granted NFA by Ecology in 2006.
15 (NA)	Salmon Bay Sand & Gravel Truck Maintenance Facility (4706 Shilshole)	Straightforward	Adjacent to the alignment; Site occupied by operating truck maintenance shop. Housekeeping appeared fair. Ecology does not maintain a file for this address or facility.
16 (35)	Olympic Athletic Club (5301 Leary Avenue NW)	Straightforward	Upgradient from alignment; Listed as CSCSL, ICR, and VCP with petroleum in soil and groundwater. VCP decision is currently in progress for this site, which was formerly a gasoline service station. Gasoline-range petroleum hydrocarbons and related compounds are present in soil and groundwater beneath the site, but currently to not appear to extend southward beneath Ballard Avenue NW, based on groundwater samples from downgradient wells along Ballard Avenue NW that do not contain detectable concentrations of gasoline and BTEX.

Map ID Number (EDR ID Number)	Site (Address)	Complexity of Impact	Rationale
17 (NA)	Stuart Marine (4600 Shilshole Ave NW)	Straightforward	Adjacent to the alignment: The site is used as storage and repair of marine equipment without any visible secondary containment and has the potential to pose an environmental concern at the site if there have been any leaks or releases associated with the equipment that have impacted soil or groundwater in the Project alignment. Ecology does not maintain a file for this address or facility.
18 (56)	Former Time Oil Property/Bill's Tires (4910 NW Leary Way)	Straightforward	Upgradient from alignment; Listed as LUST/UST site with cleanup of petroleum hydrocarbon impacted groundwater and soil started; 1 leaded gasoline and 1 used oil UST removed. Soil and groundwater contaminated by gasoline and related compounds remains beneath the site. Contaminated soil and groundwater has also been detected beneath adjacent public right-of-way, however, reports available for the site in Ecology's files state that the off-site impacts "appear to be related to releases from off-Property locations." The off-property locations are unnamed and unspecified in the available reports and therefore could not be assessed for their potential impact to the BGT alignment.
19 (NA)	Hill Machine (4905 Leary Way NW)	Straightforward	Upgradient from alignment; Site occupied by operating machine shop and was historic auto shop. Housekeeping appeared moderately poor. Ecology does not maintain a file for this address or facility.

Potential Effects

How Will the Project Affect Hazardous Materials?

The completed Project is not likely to affect hazardous materials. Bike paths are considered to be non-pollution generating surfaces by WSDOT.

Will Project Construction Affect Hazardous Materials?

Project construction along Shilshole Ave NW between 17th Ave NW and NW Vernon Place would take place within the existing street right-of-way and would involve the same type of work and improvements involved in project construction for the other portions of the project route. Specifically, all construction along Shilshole Ave NW between 17th Ave NW and NW Vernon Place would involve removal of existing concrete, asphalt, and compact gravel to be replaced with a 10- to 12-foot-wide multi-use pathway; additional improvements such as railway crossings, stormwater drainage controls, relocation of underground utilities, and reconstruction of existing driveways; and installation of traffic controls, warning signs, and signals to direct motor-vehicle, bicycle, and pedestrian traffic.

Proposed ground disturbance in most areas of the project is expected to be minimal, approximately 1.5 feet (ft) in depth for construction of railroad crossings and grading for new asphalt-paved

parking areas. Proposed ground disturbance may also extend approximately 1.5 ft to 3 ft deep for drainage controls, concrete paving, gravel resurfacing, and utility removal and relocation. The maximum depth of excavation is expected to be 9 feet deep for stormwater drainage facilities and trail lighting. No excavation deeper than 12 feet is anticipated. Groundwater may be encountered in project excavations deeper than 2 to 6 feet below ground surface.

HAZARDOUS MATERIAL SITES

Potential construction effects along the Shilshole segment, similar to the entire Project alignment, include releases of contaminants to the environment by ground-disturbing (including grading, utility excavations, landscape excavations, etc.) or dewatering activities. During construction, an uncontrolled hazardous substance could be encountered 1) in areas with known contamination or downgradient from areas of known contamination, 2) in areas where recorded activities such as hazardous waste generation or fuel storage in USTs have the potential to affect soils or groundwater, or 3) in other areas not identified in the environmental database search. Potential construction effects specific to the moderate impact sites identified in the vicinity of the Shilshole segment and in this report are discussed below.

One Moderate Impact Site

COWMAN CAMPBELL PAINT COMPANY SITE

The portion of the Shilshole segment that is located adjacent to and south of the Cowman Campbell site will be constructed on publicly owned right-of-way along Shilshole Avenue NW between the Cowman Campbell property and the railroad tracks in this location. There is no property acquisition planned in this location.

The potential impact on the Shilshole Avenue right of way from the documented release at the adjacent Cowman Campbell site is not fully known. The known area of petroleum impacted soils and groundwater is along the north side of the Shilshole Avenue NW right-of-way, immediately south of the Cowman Campbell site. Impacted soils in this area are reportedly present between approximately 3 and 6 feet below ground surface. The groundwater level in this area has been measured at approximately 2.5 to 8 feet below ground surface. No assessment data along the center or south side of the right-of-way was available in Ecology files or from the property owner and as such, it is unknown whether the contaminant plume has migrated to the south side of the right-of-way. Based on the contaminant type (petroleum hydrocarbons), width of the right-of-way (more than 50 feet), and that as of 2003 only one of the Cowman Campbell monitoring wells along the north side of the right-of-way still contained concentrations of petroleum hydrocarbons above applicable MTCA Method A cleanup levels, it is possible that the contaminant plume is limited to the north side of the right-of-way and does not extend the full width of the Shilshole Avenue NW right-of-way. But, this conclusion cannot be confirmed without additional data (or more current information). The Cowman Campbell Paint Company property owner (Brett Cowman) was called on multiple occasions to see if additional information existed, but he was unavailable at the time that this report was prepared. The construction activities in this area would consist of painting and striping, but could include limited grading, paving and potentially associated utility installation.

If grading occurs in this area, there would be a low potential to encounter impacted soil or groundwater as the excavation associated with grading would not likely extend through near-surface soils at the site to the depth of the existing contaminated soil or groundwater

(approximately 5 feet below ground surface). Additionally the distance between the source contamination and the trail (along Shilshole Avenue NW) would reduce the probability of encountering contamination at the work area. There is a higher, but still low potential to encounter impacted soil or groundwater at this portion of the project if catch basins or utility trenches extend to the depth of impacted soil or groundwater. No potential to encounter impacted soil or groundwater is anticipated if planned project improvements at this location are limited to roadway painting and striping.

OTHER SITES OF CONCERN (18 LOW IMPACT SITES)

The regulatory database search indicated that some low impact sites adjacent to and upgradient from the Project alignment have either impacted media (soil, groundwater, surface water and/or sediment), completed a cleanup, are currently being cleaned up, or are subject to restrictive covenants and/or institutional controls. See Appendix B for the complete regulatory database search for additional details. Other low impact sites were identified based on historical site use but no releases to soil or groundwater have been identified.

Potential construction effects associated with these other sites of concern in the vicinity of the Shilshole segment of the Project alignment include releases of contaminants to the environment by ground-disturbing (including grading, utility excavations, landscape excavations, etc.) or dewatering activities. During construction, an uncontrolled hazardous substance could be encountered 1) in areas with known contamination or downgradient from areas of known contamination, 2) in areas where recorded activities such as hazardous waste generation or fuel storage in USTs have the potential to affect soils or groundwater, or 3) in other areas not identified in the environmental database search. In such cases, the possible environmental effects could include the following:

- Potential release of contaminant air emissions (dust and volatile organic compounds), soil, sediment, surface water and groundwater during construction.
- Potential alteration of contaminated groundwater plume(s) and generation of contaminated water during dewatering activities.
- Potential alteration of contaminated migration pathways due to excavation and other construction activities.

Potential types of hazardous substance contamination (of soil and groundwater) that are most commonly encountered on, or adjacent to, similar urban project sites (such as those identified in Table 1 and Table 2) that may be encountered during project construction along the Shilshole segment are similar to those along the entire Project alignment and include;

- petroleum hydrocarbons,
- halogenated and/or non-halogenated volatile organic compounds (VOCs),
- polychlorinated biphenyls (PCBs),
- polycyclic aromatic hydrocarbons (PAHs) and/or other semi-volatile organic compounds (SVOCs),
- pesticides/herbicides,
- cyanide, and/or

- metals.

Note that contaminants, such as metals, VOC or SVOC compounds can be associated with petroleum hydrocarbon impacted sites. Also, above ground electrical utilities that may be relocated could potentially include polychlorinated biphenyls (e.g. PCBs in transformers). Release of PCBs during the removal/relocation of transformers could have an effect on human health and the environment. Contamination not managed properly in accordance with existing regulations could potentially affect human health and ecological receptors.

POTENTIAL HEALTH EFFECTS

Potential health effects of exposure to the contaminants of concern that could potentially be encountered at or adjacent to the sites of concern in the vicinity of the Shilshole segment include the following as identified in the United States Department of Health and Human Services Agency for Toxic Substances and Disease Registry:

- Diesel/gasoline-range petroleum hydrocarbons – Irritated eyes, skin, and mucous membrane; fatigue; blurred vision; dizziness; slurred speech; confusion; convulsions; headache; and dermatitis.
- Metals (including arsenic, chromium, copper, lead and cadmium) – irritation to nose, dermatitis, gastrointestinal disturbances, peripheral neuropathy, skin ulcers, linked to cancer (in humans and animals), irritated eyes and respiratory system, lassitude (weakness, exhaustion), insomnia, anorexia, anemia, gingival lead line (lead), tremor, wrist and ankle paralysis, encephalopathy, kidney disease, hypotension, pulmonary edema, dyspnea (breathing difficulty), chills, muscle aches; nausea, vomiting, diarrhea, and anosmia (loss of the sense of smell).
- Benzene – Irritated eyes, skin, nose, respiratory system, dizziness, headache, nausea, staggered gait; anorexia, lassitude (weakness, exhaustion), bone marrow depression and is a potential occupational carcinogen.
- Polychlorinated biphenyls – acne-like symptoms, known as chloracne; birth defects, irritation to eyes, nose and throat; acute and chronic exposure can cause liver damage, and symptoms of edema, jaundice, anorexia, nausea, abdominal pains and fatigue. PCBs are a suspect human carcinogen.
- Polycyclic aromatic hydrocarbons (PAHs) – Skin reddening or corrosion; ingestion can cause nausea, vomiting, blood pressure fall, abdominal pain, convulsions and coma; damage to the central nervous system can also occur; irritating to eyes and mucous membranes. Fifteen PAHs have been identified as carcinogenic.
- Halogenated solvents – effects on the central nervous system; irritation to mucous membranes, eyes and skin, and to a lesser extent effects on the lungs, liver and kidneys. Perchloroethylene is a confirmed animal carcinogen with unknown relevance to humans.
- Non halogenated solvents – nausea, pain, vomiting, pneumonitis, dermatitis, headache, dizziness, and central nervous system depression with ingestion; loss of consciousness, ringing in the ears, insomnia, trembling, unsteady gait, vertigo, conjunctivitis, temporary impairment of vision and/or other transient eye damage/ulceration, eye irritation and clouded or double vision with inhalation. Liver and/or kidney injury may also result from exposure.

- Pesticides/herbicides – irritation to eyes, skin; numbness and tingling in the tongue, lips, face; tremor; anxiety, dizziness, confusion, malaise (vague feeling of discomfort), headache, lassitude (weakness, exhaustion); convulsions; incoordination, imbalance, difficulty breathing, gagging, vomiting, diarrhea, agitation, convulsions, loss of consciousness; vomiting; and is considered a potential occupational carcinogen.
- Cyanide – Effects on Animals: asphyxiation, brain damage, heart damage, gastrointestinal hemorrhaging; animals lethally or sub-lethally poisoned by cyanides have exhibited optic nerve and retinal damage; and central nervous system lesions with repeated exposure.

Effects on Humans: weakness, headache, confusion, vertigo, fatigue, anxiety, dyspnea, occasionally nausea and vomiting, rapid breathing skin irritation, severe nose irritation, coma and convulsions (fatal if absorbed in large amount).. Long-term exposures have produced thyroid changes.

CONSTRUCTION HAZARDS

A consequence typically encountered during project construction is the unintentional release of hazardous substances. For example, hydraulic hoses on heavy equipment may drip hydraulic oil while in use. Cleaning up material and disposing of it could add more time and costs to construction operations. Large spills of hazardous materials during construction could also require emergency response agency intervention. These are hazards on all construction projects, but they are particularly acute for construction over water or where stormwater runs to nearby bodies of water and rivers. However, we do not anticipate any of these impacts because a Stormwater Pollution Prevention Plan (SWPPP) plan is required by a National Pollutant Discharge Elimination System (NPDES) Construction Stormwater General Permit and City of Seattle Standard Specifications. See the following section for additional details regarding measures to avoid or minimize effects.

Additional construction impacts associated with roadway stripping and repaving and any clearing associated with construction staging areas potentially include a temporary increase of pervious surfaces in the area and may also temporarily create areas sensitive to erosion. This could result in impacts to groundwater and/or stormwater at the site. Best Management Practices (BMPs) such as silt fences, hay bales, etc. should be employed to minimize the impacts of these activities on the surrounding properties and Salmon Bay to the south.

UNDERGROUND STORAGE TANKS

Underground storage tanks (USTs) or sites with former USTs and/or leaking underground storage tanks (LUSTs) have been identified adjacent to the Project area. Unidentified or abandoned tanks may also exist in or adjacent to the site. Hazardous materials or substances from previous LUSTs or unidentified existing LUSTs and/or associated piping could be encountered during excavation and have the potential to impact soil and/or groundwater along the Project alignment. Further information regarding contaminants associated with site-specific USTs and LUSTs are described in the Baseline Conditions section of this report.

UTILITY TRENCHES

Utility trenches have the potential to encounter unidentified contaminants. These trenches could provide preferential pathways for contaminant migration and could pose a risk to worker health

and safety and public health and the environment if construction activities result in a release of contaminants.

There may be the potential that trenches associated with utility relocation could encounter contaminated media associated with the Cowman Campbell site if utility trenches are excavated to the depth of impacted soil and/or groundwater (approximately 3 to 6 feet below ground surface).

There may also be the potential that utility trenches (e.g. drainage swales and conveyance, utility relocation, etc.) could encounter contaminated media associated with the other moderate impact and low impact sites (identified in Tables 2 and 3) that are adjacent to or upgradient from the Shilshole segment or in locations where contamination is encountered that has not been previously identified.

ASBESTOS-CONTAINING MATERIALS/LEAD-BASED PAINT

It is not anticipated that any structures will need to be demolished for the Shilshole segment; however, should any structures need to be demolished, potential release of asbestos-containing materials or lead-based paint during the removal of structures could have an effect on worker health and safety, human health and the environment. However, SDOT will conduct lead-based paint and asbestos surveys to determine appropriate handling for debris associated with demolition of any structures. See the following section for additional details regarding measures to avoid or minimize effects.

CLEANUP LIABILITY

Washington State Department of Ecology's Focus Paper No. 94-129 indicates that "under the Model Toxics Control Act a potentially liable person can be:

- A current or past facility owner or operator,
- Anyone who arranged for disposal or treatment of hazardous substances at the site,
- Anyone who transported hazardous substances for disposal or treatment at a contaminated site, unless the facility could legally receive the hazardous materials at the time of transport,
- Anyone who sells a hazardous substance with written instructions for its use, and abiding by the instructions results in contamination."

Therefore, there is the potential for SDOT to become a potentially liable person if one or more of these conditions are met.

The most likely scenario where SDOT would assume environmental liability would be in the acquisition of a contaminated site. We understand that SDOT does not currently plan to acquire any additional properties along Shilshole Avenue, between 17th Avenue NW and NW Vernon Place. However, we noted that there is a potential for SDOT to incur environmental liability if historic or current activities have contaminated soil and/or groundwater at potential properties to be acquired in the future and this potential should be evaluated before any additional properties are acquired.

Liability can also be incurred if construction activities cause contaminated media to spread, increase contamination at a site or prevent the implementation of future cleanup actions.

Construction activities may also have the potential to impede future cleanup by liable parties on adjacent or upgradient properties if the project elements are permanent or difficult to remove.

SDOT has the potential to incur environmental liability if project elements impede a future cleanup. Such liability has the potential to be incurred for the cleanup sites located adjacent to or upgradient from the Project alignment including those properties identified as moderate impact. For example, it is possible that trail construction activities could impact groundwater monitoring wells that are associated with the Cowman Campbell Paint Company site. SDOT also may have the potential to incur environmental liability in association with the properties identified as “low impact” in Table 2 if project elements impeded a future cleanup. However, most of the project features are such that they would be able to be readily removed and replaced should there be a need to conduct a cleanup beneath the site associated with adjacent or upgradient properties.

What are the Indirect Effects of the Project on Hazardous Materials?

In addition to Project construction effects, an overall beneficial indirect effect to the area will likely result from increased use of the Trail by commuters, resulting in lower automobile traffic volumes. No detrimental indirect effects are anticipated related to hazardous materials from the construction or operation of the Project.

What are the Unavoidable Adverse Effects?

No specific unavoidable adverse effects (such as uncontained spills or releases of hazardous materials that impact soil or groundwater before they can be contained or remediated) are anticipated for this project, though the potential for unavoidable negative effects to arise always exists. However, general mitigation measures can be taken to control, mitigate, or eliminate any possible potential effects. These general mitigation measures are discussed in the section headed “How will the Project mitigate unavoidable negative effects?”

Measures to Avoid or Minimize Effects

What Will be Done to Avoid or Minimize Adverse Effects from Hazardous Materials?

SDOT will comply with all applicable environmental procedures. SDOT will manage contaminated media that may be encountered within the Project study area as listed below:

- Management of contaminated media such as soil or groundwater, control and management of hazardous wastes, and transport of hazardous substances will be conducted consistent with applicable environmental regulations.
- SDOT may acquire additional information regarding the nature and extent of contamination at the identified sites for specific project actions, as needed, in order to avoid or cleanup impacted media prior to/during construction. This information can be obtained through research of publicly available data, and by conducting Phase I environmental site assessments and Phase II environmental site investigations.
- SDOT will phase construction activities in concert with any needed cleanup activities to avoid contaminated areas. Communication among the responsible parties and the regulatory agencies, and coordination of schedules, would lessen environmental impacts.

- SDOT will implement construction techniques that minimize disturbance to the subsurface and prevent the transport of contaminants to uncontaminated areas, as necessary. These techniques will address dewatering activities, site grading and excavation, and stormwater pollution prevention.
- SDOT will conduct additional studies, as needed, to determine if asbestos-containing materials or lead-based paint are present in structures prior to demolition activities to minimize exposure to workers, the public and the environment. Applicable regulations pertaining to the handling and disposal of these materials will be followed if structures are found to contain these substances.

SDOT will manage construction activities to mitigate impacts to public services, impacts to the environment (i.e. construction related releases) and worker and public health and safety:

- SDOT will follow careful construction practices to protect against hazardous material spills from routine equipment operation during construction. SDOT will require a Spill Prevention, Control and Countermeasures (SPCC) plan as required by WSDOT Standard Specification 1-07.15.
- SDOT will identify any utilities that need to be relocated or protected. Utility work will be completed in a manner that will minimize utility service interruptions to the community.
- Electrical transformers containing oil, considered a hazardous substance under state regulations, will be handled carefully in order to avoid a release or accidental spill during the relocation of transformers. Workers involved with handling transformers containing oil will be trained in the identification and proper handling of hazardous materials.
- SDOT will require the construction contractor to prepare a worker Health and Safety Plan that would minimize the effects of identified and unanticipated hazardous substance impacts from contaminated soil and groundwater to the public and worker health and safety.

What Will be Done to Minimize Construction Effects?

SDOT will conduct the following activities to avoid or minimize effects to human health or the environment.

KNOWN OR SUSPECTED CONTAMINATION WITHIN THE PROPOSED PROJECT AREA

- SDOT will be responsible for remediating and monitoring any contamination found on properties acquired for this Project. SDOT will further evaluate the identified properties before acquisition or construction occurs. Contamination in soils will be evaluated relative to MTCA cleanup levels.
- Management of contaminated media such as soil or groundwater, control and management of hazardous wastes and transport of hazardous substances will be conducted consistent with applicable environmental regulations.
- SDOT may conduct additional studies (as needed) to locate undocumented USTs and fuel lines prior to construction. Areas of concern include current and former residential and commercial structures as well as fuel tanks associated with former industrial sites. USTs encountered within the Project alignment would be permanently decommissioned and properly removed before general construction activities are started.

- SDOT will meet all regulatory conditions imposed at potentially contaminated properties in the Project alignment.
- SDOT will meet all appropriate discharge approvals if water affected with hazardous materials is encountered and needs to be managed during construction.
- SDOT may conduct additional modified environmental site assessments or transaction screening evaluations, as needed, for sites located adjacent to the Project alignment to further identify site conditions. Even sites not located within a Project area or alignment could have adverse impacts on the design and construction of the Project due to off-site migration of contaminants. The site assessment would include a review of existing environmental conditions with a focus on the potential for off-site contamination by groundwater or surface water.

KNOWN OR SUSPECTED CONTAMINATION OUTSIDE THE PROJECT ALIGNMENT

Contaminated groundwater originating from properties located hydrologically upgradient from the Project area could migrate to the Shilshole segment Project site. SDOT generally would not incur liability for groundwater contamination that has migrated into the Project area as long as the agency does not acquire the source of the contamination. SDOT will manage the associated contaminated media within the Project area in accordance with all applicable rules and regulations.

UNKNOWN CONTAMINATION

The potential to discover previously unidentified contamination is a risk associated with all construction projects. Contaminated sites discovered during construction will be managed so that construction activities comply with state and federal environmental regulations. SDOT will follow procedures for unknown contamination handling, reporting and disposal as outlined in the WSDOT Environmental Procedures Manual (EPM) Chapter 620.08 and all applicable City of Seattle codes and specifications.

WORKER AND PUBLIC HEALTH AND SAFETY

SDOT will comply with the following regulations and agreements to minimize the effects of hazardous materials on worker and public health and safety:

- State Dangerous Waste Regulations, Chapter 173-303 WAC.
- Safety Standards for Construction Work, Chapter 296-155 WAC.
- National Emission Standards for Hazardous Air Pollutants, CFR, Title 40, Volume 5, Parts 61 to 71.
- General Occupational Health Standards, Chapter 296-62 WAC.
- SDOT Standard Specifications for Municipal Construction 2008 Section 1-07.1(2).
- Seattle Municipal Code 21.16.300.
- Seattle Municipal Code 6.202.020.

HAZARDOUS MATERIALS SPILLS DURING CONSTRUCTION

SDOT will prepare and implement a Spill Prevention, Control and Countermeasures (SPCC) plan as required by WSDOT Standard Specifications 2008 Section 1-07.15(1)

(<http://www.wsdot.wa.gov/Environment/HazMat/SpillPrevention.htm>) to minimize or avoid effects hazardous materials will have on soil, surface water and groundwater should a spill occur.

HAZARDOUS MATERIALS SPILLS DURING OPERATION

Hazardous materials spills are unlikely to occur during the operation of the completed Trail extension. However, SDOT will notify Ecology in the event of an accidental spill along the Project alignment during the operational phase.

How Will the Project Mitigate Unavoidable Negative Effects?

No specific mitigation measures for unavoidable negative effects (such as uncontained spills or releases of hazardous materials that impact soil, groundwater etc. before they can be contained or remediated) are anticipated for this project, though the potential for unavoidable negative effects to arise always exists.

There is a potential for unavoidable negative effects to be encountered in association with the potential moderate impact Cowman Campbell Paint Company site and other identified potential low impact sites due to the distance from the project alignment. However, general mitigation measures can be taken to control, mitigate, or eliminate any possible potential negative effects.

SDOT will handle all impacted material encountered during construction in accordance with all applicable rules and regulations and will utilize best management practices as described in the project specific construction plans and specifications. Environmental regulations require the following to appropriately handle contaminated media that may potentially be encountered:

- Appropriate management techniques for contaminated media such as soil or groundwater.
- Strict control and management of hazardous wastes.
- Appropriate transportation of hazardous substances.

SDOT will utilize the following general mitigation practices to control, mitigate, or eliminate potential negative effects associated with encountering contaminated media (including spills, releases, worker and public health and safety etc.).

MANAGEMENT OF CONTAMINATED MEDIA

- Impacted soil and groundwater that may be encountered at the site will be characterized, handled and disposed in accordance with all applicable rules, regulations and discharge approvals to minimize the potential for releases to surrounding properties.
- Construction activities will be phased in concert with needed cleanup activities to avoid contaminated areas and will be planned so as to minimize disturbance to the subsurface to prevent the transport of contaminants to uncontaminated areas.

SPILLS

- Best management practices will be implemented in order to protect against hazardous material spills from routine equipment operation during construction.
- An SPCC plan and a Stormwater Pollution Prevention Plan (SWPPP) will be prepared to minimize or avoid effects hazardous materials will have on soil, surface water and groundwater should a spill occur.

UTILITY SERVICES

- SDOT will identify any utilities that need to be relocated or protected prior to start of construction to protect services to the surrounding community.

TRAINING

- Workers will be trained in the proper identification, handling and disposal of contaminated media that may exist in properties and buildings affected by the project.
- Workers will be trained in the proper procedures should accidental spills of hazardous materials occur.
- Workers will be trained in procedures to prevent hazardous material from migrating offsite and coming into contact with the general public (e.g., via erosion or dust control problems).

HEALTH AND SAFETY

- The Contractor will be responsible for the preparation of a worker Health and Safety Plan that would minimize the effects of identified and unanticipated hazardous substance impacts from contaminated soil and groundwater on worker and public health and safety.

Specific mitigation measures related to the moderate impact site Cowman Campbell Paint Company that may be taken where construction activities encounter unavoidable negative impacts are as follows.

COWMAN CAMPBELL PAINT COMPANY

Site specific measures to mitigate impacts from petroleum hydrocarbons, and BTEX compounds (or other potential contaminants associated with the site) that may be encountered on the project alignment adjacent to the Cowman Campbell site include the following:

- SDOT will require the construction contractor to prepare a worker Health and Safety Plan to minimize the effects of identified and unanticipated hazardous substance impacts from contaminated soil and groundwater on worker and public health and safety.
- The contractor shall train workers in the proper monitoring and identification of impacted media. 40-hour HAZWOPER training will be required for workers involved in the characterization, handling and containment of contaminated material.
- Work activities will be suspended and the Engineer will be notified immediately if a hazardous substance is detected at concentrations equal to or greater than established PELs as defined in the site specific health and safety plan. Work activities will also be ceased and the Engineer notified if potentially impacted material, as identified by field observations (e.g. staining, sheen, odor, volatile vapor detection) is encountered. Additional soil, groundwater and/or air sampling and testing shall be performed to determine the nature of the impacted material and the manner in which the impacted media will be handled. Disposal procedures shall be determined by Local, State, and Federal regulations.
- The contractor will be required to provide PPE to workers at the site. The PPE shall be readily accessible to workers in the event that monitoring detects hazardous substances in concentrations equal to or greater than the established PELs or suspected hazardous materials are encountered.
- SDOT will require the construction contractor to prepare and implement an SPCC plan and a Stormwater Pollution Prevention Plan (SWPPP) to minimize or avoid effects hazardous

materials will have on soil, surface water, and groundwater should a spill occur. Workers shall be trained in the proper procedures for addressing accidental spills of hazardous materials.

What are the Recommendations for Further Investigation?

Further investigations into the status of environmental concerns at adjacent and/or upgradient sites are not anticipated at this time.

What are the Cost Estimates for Further Investigations?

Should SDOT decide to conduct further investigations of identified sites of concern adjacent to or upgradient from the Project alignment, or for due diligence purposes prior to potential property acquisitions, the following cost estimates may be used as a reference.

- The average cost of a Phase I Environmental Site Assessment can range from approximately \$5,000 to \$10,000 per site.
- The cost of a Phase II Environmental Site Investigation can cost, on average, approximately \$25,000 per site but can be much higher depending on the magnitude of the study and contaminants of concern.

These costs can vary dramatically based on the historic and current land use of a site, the size of the site and the type of land use on adjacent sites (e.g. industrial versus residential site uses). Industrial sites and sites within industrial areas (such as the case of this project area) generally have greater research needs for characterization of environmental conditions than residential sites.

Preliminary Mitigation Cost Estimates?

No specific mitigation measures are required because no unavoidable negative effects are anticipated for the construction of the trail along the Shilshole segment. General mitigation measures will be taken to control, mitigate, or eliminate any possible potential effects since the potential for unavoidable negative effects to arise always exists. SDOT will handle all impacted material encountered during construction in accordance with all applicable rules and regulations and will utilize best management practices as described in the project specific construction plans and specifications. Costs associated with handling and disposal of impacted material potentially encountered at the site are discussed below.

General Cost Estimates for Excavation and Disposal of Impacted Media Potentially Encountered in the Project Alignment?

Should impacted material be encountered within the proposed Project alignment, the following general cost estimates can be used for planning purposes. However, a Project specific cost estimate will be required in order to accurately budget for excavation and/or disposal efforts that may be completed if SDOT encounters contaminated materials within the Project alignment.

The estimated cost for excavation and disposal of contaminated soil includes:

- excavation, temporary on-site storage and replacement of overburden soils that need to be removed to access the underlying contaminated soil (where applicable) - \$12 per cubic yard;

- excavation and handling of contaminated soil - \$6 per cubic yard;
- transportation and tipping fees for disposal of contaminated material at an appropriate upland facility - \$40 per ton (as stated previously, this cost estimate could be much higher [\$180 to over \$240/ton] if media is deemed dangerous waste);
- restoration of the contaminated zone by backfilling with imported granular soil - \$8 per cubic yard for material and \$6 per cubic yard for placement; and
- Disposal and treatment of dewatering water - \$2 per gallon (as stated previously, this cost estimate could be much higher if water is deemed dangerous waste).

Costs associated with mobilization, site preparation, dewatering of the excavation and contaminated material, analysis of the dewatering water, utility and pavement replacement and other site restoration are NOT included in the estimates provided.

Excavation and disposal estimates of this nature are generally accurate within 50 percent of actual costs. Additionally, where soil and groundwater disposal requires disposal in a facility that accepts dangerous waste (soil or groundwater with elevated concentrations of specific chemicals of concern) increased costs will be incurred. The cost of groundwater classified as dangerous waste ranges from \$0.80 to \$1.16 per gallon when the groundwater is delivered in bulk quantities or approximately \$179 per drum if delivered in drums. Disposal costs for soil classified as dangerous waste are estimated to range from about \$180/ton to \$240/ton, but may vary depending on stabilization needs. These estimated costs include transportation and disposal fees.

LIMITATIONS

This Draft Hazardous Materials Discipline Report has been prepared for use by SVR Designs and the City of Seattle, Department of Transportation. GeoEngineers has performed this Hazardous Materials study of the Burke Gilman Trail Corridor located along Shilshole Avenue between 17th Avenue NW and Vernon Place NW in general accordance with the scope and limitations of our proposal dated May 4, 2010.

Within the limitations of scope, schedule and budget, our services have been executed in accordance with the generally accepted environmental science practices for Hazardous Material Discipline Reports in this area at the time this report was prepared. No warranty or other conditions, express or implied, should be understood.

Any electronic form, facsimile or hard copy of the original document (email, text, table, and/or figure), if provided, and any attachments are only a copy of the original document. The original document is stored by GeoEngineers, Inc. and will serve as the official document of record.

GLOSSARY

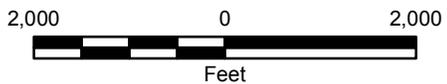

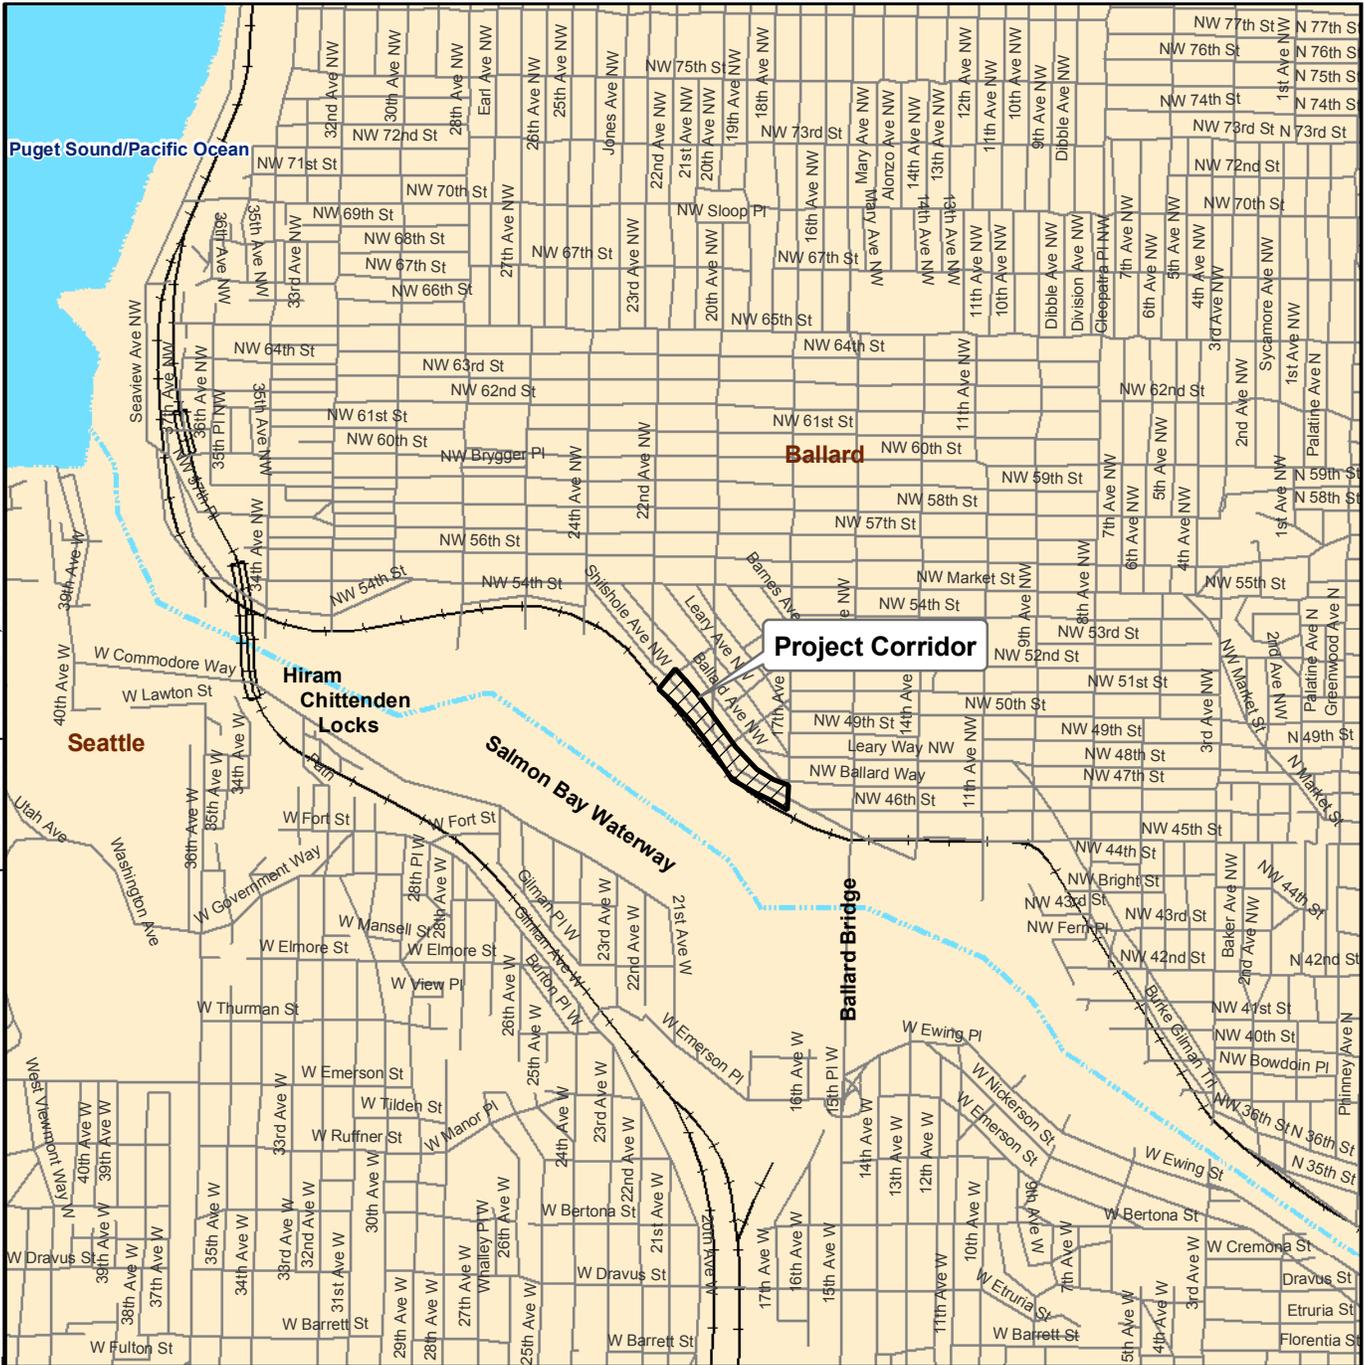

Term	Meaning
Brownfields	With certain legal exclusions and additions, the term “Brownfield site” means real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. (Public Law 107-118 (H.R. 2869) January 2002).
Comprehensive Environmental Response Compensation and Liability Act (CERCLA)	Federal legislation that requires the parties responsible for contamination to conduct or pay for the cleanup. If the U.S. Environmental Protection Agency’s (EPA’s) efforts to take an enforcement action for the cleanup are not successful, the Federal government can clean up a site using the CERCLA Trust Fund.
Code of Federal Regulations (CFR)	The Code of Federal Regulations is the codification of the general and permanent rules published in the Federal Register by the executive departments and agencies of the federal government. It is divided into 50 titles that represent broad areas subject to federal regulation. Each volume of the CFR is updated once each calendar year and is issued on a quarterly basis. (National Archives and Records Administration Website: http://www.gpoaccess.gov/cfr/about.html)
Downgradient	The direction of flow; i.e., downstream.
EDR Report	A list of databases searched for potential hazardous materials contamination, including selected detailed information from federal and state lists, and maps illustrating the identifiable sites within the indicated search radius.
General housekeeping	This describes how well the site is maintained. For example, observations may record if soil is stained or if garbage, junk cars, and/or discarded chemical containers are scattered about the property.
Groundwater	That portion of the water below the ground surface that is free flowing within the soil particles. Groundwater typically moves slowly, generally at a downward angle because of gravity, and eventually enters into streams, lakes, and oceans.
Leaking Underground Storage Tank (LUST)	A known leaking tank located underground typically containing hazardous materials, most commonly petroleum products.
Model Toxics Control Act (MTCA)	Washington State legislation adopted as the counterpart to the Federal Superfund law, also known as CERCLA. Like CERCLA, MTCA sets up a process to identify, investigate, and cleanup contaminated properties that are, or may be, a threat to human health or the environment. MTCA allows for the assessment of damages where the contamination injures wildlife or the environment.
National Pollutant Discharge Elimination System (NPDES)	The national program for issuing, modifying, revoking and reissuing, terminating, monitoring and enforcing permits, and imposing and enforcing pretreatment requirements under Sections 307, 318, 402, and 405 of the Clean Water Act. (NPDES glossary Web site: http://cfpub2.epa.gov/npdes/glossary.cfm?program_id=0#N)

Term	Meaning
No further action (NFA)	An official acknowledgement from the Washington State Department of Ecology that a contaminated site has undergone cleanup or no longer poses a threat to human health or the environment.
Pollutant	Any substance introduced into the environment that contaminates or otherwise adversely affects the usefulness of a resource.
Polychlorinated Biphenyls (PCBs)	Polychlorinated biphenyls are aromatic compounds containing two benzene nuclei with two or more substituted chlorine atoms.
Remediation	Actions to identify, eliminate, or minimize hazardous substances that pose a threat to human health or the environment.
Right-of-way	Land purchased prior to the construction of transportation improvements along with land for sound walls, retaining walls, stormwater facilities, and other project features. This also includes permanent or temporary easements for construction and maintenance. Vacant land may also be set aside for future highway expansion under certain circumstances.
Spill Prevention Control and Countermeasures (SPCC) Plan	A plan for minimizing effects to soil, surface water, and groundwater in the event of a spill of contaminated soil, petroleum products, contaminated water, or other hazardous substances. The SPCC plan addresses construction procedures, equipment, and materials.
Storm drain	A sewer that carries stormwater and surface water, street wash, and other wash waters or drainage, but excludes sewage and industrial wastes; also called a storm sewer.
Volatile organic compound (VOC)	An organic (carbon-based) compound that readily forms vapors at normal temperature and pressure. The term is generally applied to organic solvents, certain paint additives, aerosol spray can propellants, fuels (such as gasoline and kerosene), petroleum distillates, dry cleaning products, and many other industrial and consumer products, ranging from office supplies to building materials.
Windshield survey	The process of driving by an area to look at properties for general housekeeping and verify property addresses; a method of observing a study area by driving the area in a vehicle.

APPENDIX A METHODOLOGY

How Did We Collect Information on Hazardous Materials for This Report?

Information was collected for this Discipline Report by:

- Reviewing and summarizing publicly available records and databases to obtain information indicating the location of hazardous materials.
- Identifying historical land use of the Project area.
- Evaluating local geology and soil types, surface drainage pathways, groundwater depths, and overall groundwater flow direction by reviewing available geologic literature and topographic maps. GeoEngineers used this information to evaluate the potential migration pathway of hazardous materials in the environment.
- Conducting a windshield survey to observe site features and possible sources of hazardous materials.

This Discipline Report identified hazardous material sites adjacent to the Project alignment. Further investigation is recommended for any other parcels identified in this memorandum as sites of concern that may be acquired for this Project in the future.

How Were Individual Sites Considered For In-Depth Analysis?

The initial screening process for determining which sites required further analysis included the following two criteria:

- The site is located within or adjacent to the Project alignment and potentially contained hazardous materials.
- The site contained hazardous materials and was located hydraulically at an incline higher than the proposed Project alignment.

GeoEngineers further assessed the sites identified for in-depth analysis. For each of the nineteen, the probable extent of contamination was assessed to evaluate the likelihood that the site will impact the project area. Each site was assigned a risk level, ranked as potential “high impact”, “moderate impact”, or “low impact” per WSDOT guidance.

High impact sites are identified based on known concerns regarding historical activities, known and extensive contamination, and/or high likelihood the site will impact the project. Moderate impact sites are identified where concern exists because of historical activities and/or the site may likely impact the project but sufficient evidence is not available. Low impact sites are identified where a potential concern exists because of historical activities, but either the likelihood for the site to impact the project is low or contamination was previously remediated.

The risk evaluation also assessed the level of complexity (straightforward or complex) that any mitigation measures associated with each site will have upon the project; levels of complexity for each site is determined based on the anticipated size of the impact area, the relative toxicity and

quantity of contaminants, and difficulty of cleanup remedies. Additionally, sites for this study that met the standard of “high impact” or “moderate impact” if there was evidence of a release to either soil or groundwater. For example, although a site like Covitch Williams, which had a substantial number of petroleum tanks near the proposed trail alignment, it did not meet the criteria of a “high impact” or “moderate impact” site because no evidence of soil or groundwater contamination was identified during our research.

GeoEngineers identified which sites required further analysis by collecting information from the sources listed below.

Regulatory Database Review

GeoEngineers reviewed local, state and federal databases to identify potential sources of hazardous materials that could affect the planned Project alignment provided by Environmental Data Resources, Inc. (EDR)^{3,4}. GeoEngineers, Inc. contracted EDR, Inc. to conduct a regulatory database search consistent with WSDOT, American Society for Testing and Materials, and Federal Highway Administration (FHWA) standards and guidelines. EDR provided a comprehensive search of existing environmental regulatory agency databases for known or suspected contaminant-related concerns within the Project area. Appendix B contains the full database list and results of EDR’s database research.

Historical Research

GeoEngineers conducted historical research efforts to identify and characterize past land use activities. From these records, GeoEngineers:

- Compiled a land use inventory using aerial photographs, Sanborn Fire Insurance Maps and Polk City directories. Reviewed aerial photographs dated between 1936 and 2004.
- Compiled a land use inventory using Sanborn Fire Insurance Maps. Reviewed Sanborn Fire Insurance maps dated between 1893 and 1968.
- Compiled a land use inventory using Polk City Directories. Reviewed Polk City Directories dated between 1920 and 2005.

Data Validation

GeoEngineers requested and reviewed publicly available files from the Washington State Department of Ecology (Ecology) for specific properties where hazardous materials were likely to exist based on the EDR report and historical background research. This review focused on identifying the nature and extent of known contamination and cleanup activities on properties within the Project area.

³ Environmental Data Resources, EDR Data Map, 2010.

⁴ The EDR report includes a list of databases that we reviewed, including selected detailed information from federal and state lists, and maps illustrating the identifiable sites within the indicated search radius. Sites are located on the focus maps provided by EDR. The EDR report is attached as Appendix B.

Windshield Survey

GeoEngineers conducted a windshield survey of the Project area, focusing on properties where hazardous materials were known or suspected to be present. The survey included properties adjacent to or upgradient from the Project alignment that could affect construction or operation within the Project alignment. GeoEngineers conducted a windshield survey by driving along the proposed Project alignment to a) verify the addresses of identified hazardous materials sites, and b) look for previously unidentified hazardous materials sites that might affect Project construction or operation. GeoEngineers noted the following information during the windshield survey:

- The presence of improvements on the site.
- The usage and physical setting, including slope, drainage features and soils.
- Indications suggesting the presence of USTs, above-ground storage tanks, buried pipelines, drums, hazardous and/or solid waste disposal, soil staining and distressed vegetation.
- General housekeeping observations⁵.
- Adjacent and nearby properties with a potential to contribute hazardous materials.

Windshield Survey Summary of Observations – Project Site

A representative of GeoEngineers performed a visual reconnaissance of the site on May 27, 2010. In conducting the windshield survey, GeoEngineers looked only at features in plain sight from public access corridors. GeoEngineers did not enter any properties or view conditions within buildings.

Table A-1 below summarizes conditions observed during our windshield survey and site reconnaissance. The following section contains additional details regarding conditions of potential environmental significance observed during our windshield survey and a summary list of known or suspect environmental conditions identified by this portion of our study. Photographs of the site were taken to document observations made during our reconnaissance. Site photographs are available in our files.

⁵ General housekeeping observations include noting how well the site is maintained. For example, the GeoEngineers notes if soil is stained or if garbage, junk cars, and/or discarded chemical containers are scattered about the property.

TABLE A-1. SUMMARY OF WINDSHIELD SURVEY OBSERVATIONS – PROJECT SITE

Feature	Observed		Comment, Location and/or Description and other development on site (e.g. pavement, etc.)
	Yes	No	
Structures (existing)		X	Occupied by paved and gravel shoulder of Shilshole Avenue NW and railroad tracks.
Structures (evidence of former)		X	
Heating/Cooling System		X	
Floor Drains, Sumps or Drywells		X	
Aboveground Storage Tanks (ASTs)		X	
Underground Storage Tanks (USTs) or Evidence of USTs		X	
Drums or Other Containers		X	
Chemicals or Hazardous Materials (other than de minimis quantities of cleaning products)		X	
Evidence of Leaks, Spills or Releases Surrounding ASTs, USTs, and/or Chemical Storage Areas		X	
Stained or Corroded Floors, Walls or Drains (other than apparent water stains or minor oil stains on pavement from parked vehicles)		X	
Pipes of Unknown Origin or Use		X	
On-site Septic System		X	
Sewage Disposal System		X	
Potable Water Supply		X	
Solid Waste Refuse Dumpsters		X	
Hydraulic Hoists		X	
Oil/Water Separators		X	
Discolored or Stained Soil or Vegetation Potentially from Hazardous Substances	X		Some soil staining was observed along the south side of Shilshole Avenue NW. Staining appeared to be associated with vehicle traffic.
Hazardous Waste Disposal Areas		X	
Uncontained Debris, Refuse or Unidentified Waste Materials		X	
Standing Water or Other Liquids	X		Small puddles of water were observed in depressions along south shoulder of Shilshole Avenue NW.
Catch Basins and Storm Water Drainage	X		Various stormwater catchbasins are located along the roadways adjacent to the project alignment, on Shilshole Avenue NW.

Feature	Observed		Comment, Location and/or Description and other development on site (e.g. pavement, etc.)
	Yes	No	
Pits/Ponds/Lagoons		X	
Waste or Wastewater Discharges		X	
Unusual Odors		X	
Stressed Vegetation		X	
Fill Material	X		Gravel surfacing material along the shoulder of Shilshole Avenue NW is likely fill.
Water Wells (agricultural, domestic, monitoring)		X	Monitoring wells were observed along the north side of Shilshole Avenue NW south of C&C Paints.
Pad-Mounted Transformers		X	
Pole-Mounted Transformers	X		Various pole mounted transformers were observed along the Trail alignment
Other Conditions of Environmental Concern		X	

FINDINGS

The planned Trail alignment along Shilshole Avenue NW is primarily occupied by paved roadways and gravel shoulder surfacing.

Known or suspect environmental conditions identified by this portion of the study are listed below:

- The monitoring wells observed south of the C&C Paint building are associated with groundwater monitoring of contaminant plumes originating from the Cowman Campbell Paint Company site. Construction activities in this portion of the site may encounter impacted soil or groundwater associated with those contaminant plumes.
- The surface of the south shoulder of Shilshole Avenue NW appears stained in some locations. The staining appears to be associated with vehicular traffic and activities associated with the railroad tracks in this location. The surface staining in these locations could indicate impacted soil and/or groundwater which may have the potential to impact the Trail construction.
- There is evidence of the use of fill in most areas of the site. The nature and origins of the fill were not apparent during the site visit. The existence of fill of unknown origins along the planned Trail alignment could pose an environmental concern to the project if the fill material is impacted by contaminants and Project activities encounter such material during the construction.
- Pole mounted transformers can pose an environmental concern to the site if there have been historical leaks of the insulating oil in the transformers, particularly in older transformers containing PCBs. The transformers along the planned Trail alignment appeared to be in good condition but PCB content could not be assessed from the ground as labeling was not visible.

Windshield Survey Summary of Observations – Adjacent Properties and Vicinity

We viewed properties located adjacent to and surrounding the site on May 27, 2010 from accessible public rights-of-way and the site. We did not enter adjacent properties or buildings. The site generally is situated in an area that is heavily developed with commercial, retail and industrial uses. The Findings section, below, contains additional details regarding conditions of potential environmental significance observed during our windshield survey and a list of known or suspect environmental conditions identified by this portion of our study. Table A-II below outlines adjacent land uses and pertinent observations with respect to conditions that could pose a recognized environmental condition on the subject site.

TABLE A-2. ADJOINING STREETS AND ADJACENT PROPERTIES OBSERVATIONS

Direction	Adjoining Street	Position Relative to Site ⁶	Adjacent Property and Use
North	Shilshole Avenue NW	Upgradient	The north adjacent property is generally occupied by numerous commercial industrial facilities including marine equipment repair, Sand and Gravel Company warehouses, truck maintenance, fuel sales, Cowman Campbell Paint Company, and both paved and gravel parking areas.
South	Shilshole Avenue NW	Downgradient	South adjacent properties are generally occupied by commercial and industrial facilities including boatyards, marine equipment sales, repair, and salvage, bulk fuel facility, and sand and gravel facility. Train tracks run parallel to Shilshole Avenue NW on the south side of the right-of-way.
East	Vernon Place	Crossgradient	The east adjacent property is occupied by additional marine equipment sales and repair and boatyard properties.
West	17th Avenue NW	Crossgradient	The west adjacent property is occupied by additional marine equipment sales and repair and boatyard properties.

FINDINGS

The properties located adjacent to the planned Trail alignment and in the surrounding area are occupied by commercial, retail and industrial facilities. Various boat yards, a sand and gravel facility, and fuel sales facilities are located along both sides of Shilshole Avenue NW.

Known or suspect environmental conditions identified by this portion of the study are listed below:

- The heavy industrial traffic along Shilshole Avenue NW, may pose environmental concerns to the site if there have been historic spills or leaks associated with these activities.
- The presence of various marine equipment and/or truck repair facilities and fuel storage and sales facilities may pose a potential environmental risk to the planned Trail alignment if there

⁶ The inferred shallow groundwater flow direction in the site vicinity is to toward Salmon Bay, to the south and southwest along the planned Trail alignment.

have been spills or releases associated with activities at these sites that have impacted groundwater that may have the potential to migrate onto the planned Trail alignment.

- Monitoring wells observed along the north side of Shilshole Avenue NW south of Cowman Campbell Paint Company are associated with the monitoring of impacted groundwater at the Cowman Campbell site. Information obtained during our review of Ecology files indicates that the impacted groundwater at the site may migrate beneath Shilshole Avenue NW.

The presence of ship yards, fuel facilities and railway tracks along the south side of Shilshole Avenue NW have the potential to pose environmental concerns to the portion of the planned Trail alignment in that area.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

FEDERAL RECORDS

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 01/29/2010 has revealed that there are 2 CERCLIS sites within the searched area.

<u>Site</u>	<u>Address</u>	<u>Map ID</u>	<u>Page</u>
<i>VALUE PLATING & METAL POL</i>	<i>3207 11TH AVENUE SW</i>	<i>109</i>	<i>1109</i>
<i>WEYERHAEUSER SEATTLE LAB-UNDEV</i>	<i>3233 11TH ST SW</i>	<i>109</i>	<i>1116</i>

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 06/23/2009 has revealed that there are

EXECUTIVE SUMMARY

8 CERC-NFRAP sites within the searched area.

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 01/13/2010 has revealed that there are 14 RCRA-LQG sites within the searched area.

EXECUTIVE SUMMARY

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 01/13/2010 has revealed that there are 8 RCRA-SQG sites within the searched area.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 01/13/2010 has revealed that there are 40 RCRA-CESQG sites within the searched area.

RCRA-NonGen: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA-NonGen list, as provided by EDR, and dated 01/13/2010 has revealed that there are 100 RCRA-NonGen sites within the searched area.

EXECUTIVE SUMMARY

TRIS: The Toxic Chemical Release Inventory System identifies facilities that release toxic chemicals to the air, water, and land in reportable quantities under SARA Title III, Section 313. The source of this database is the U.S. EPA.

A review of the TRIS list, as provided by EDR, and dated 12/31/2008 has revealed that there are 3 TRIS sites within the searched area.

<i>RUDD CO INC</i>	<i>1141 NW 50TH ST</i>	<i>43</i>	<i>340</i>

FTTS: FTTS tracks administrative cases and pesticide enforcement actions and compliance activities related to FIFRA, TSCA and EPCRA (Emergency Planning and Community Right-to-Know Act) over the previous five years. To maintain currency, EDR contacts the Agency on a quarterly basis.

A review of the FTTS list, as provided by EDR, and dated 04/09/2009 has revealed that there are 6 FTTS sites within the searched area.

HIST FTTS: A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

A review of the HIST FTTS list, as provided by EDR, and dated 10/19/2006 has revealed that there are 7 HIST FTTS sites within the searched area.

EXECUTIVE SUMMARY

ICIS: The Integrated Compliance Information System (ICIS) supports the information needs of the national enforcement and compliance program as well as the unique needs of the National Pollutant Discharge Elimination System (NPDES) program.

A review of the ICIS list, as provided by EDR, and dated 11/10/2009 has revealed that there is 1 ICIS site within the searched area.

<u>Site</u>	<u>Address</u>	<u>Map ID</u>	<u>Page</u>
TRIDENT SEAFOODS CORP	5303 SHILSHOLE AVE NW	39	301

PADS: The PCB Activity Database identifies generators, transporters, commercial storers and/or brokers and disposers of PCBs who are required to notify the United States Environmental Protection Agency of such activities. The source of this database is the U.S. EPA.

A review of the PADS list, as provided by EDR, and dated 09/01/2009 has revealed that there are 3 PADS sites within the searched area.

ICICLE SEAFOODS INC 9TH AVE	4207 9TH AVE NW	92	975
FOSS MARITIME CO	660 W EWING ST	104	1058

MLTS: The Material Licensing Tracking System is maintained by the Nuclear Regulatory Commission and contains a list of approximately 8,100 sites which possess or use radioactive materials and are subject to NRC licensing requirements.

A review of the MLTS list, as provided by EDR, and dated 12/24/2009 has revealed that there is 1 MLTS site within the searched area.

<u>Site</u>	<u>Address</u>	<u>Map ID</u>	<u>Page</u>
TRIDENT SEAFOODS CORPORATION	5303 SHILSHOLE AVENUE N	39	297

FINDS: The Facility Index System contains both facility information and "pointers" to other sources of information that contain more detail. These include: RCRIS; Permit Compliance System (PCS); Aerometric Information Retrieval System (AIRS); FATES (FIFRA [Federal Insecticide Fungicide Rodenticide Act] and TSCA Enforcement System, FTTS [FIFRA/TSCA Tracking System]; CERCLIS; DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes); Federal Underground Injection Control (FURS); Federal Reporting Data System (FRDS); Surface Impoundments (SIA); TSCA Chemicals in Commerce Information System (CICS); PADS; RCRA-J (medical waste transporters/disposers); TRIS; and TSCA. The source of this database is the U.S. EPA/NTIS.

A review of the FINDS list, as provided by EDR, and dated 10/19/2009 has revealed that there are 203 FINDS sites within the searched area.

RAATS: The RCRA Administration Action Tracking System contains records based on enforcement actions issued under RCRA and pertaining to major violators. It includes administrative and civil actions brought by the United States Environmental Protection Agency. The source of this database is the U.S. EPA.

A review of the RAATS list, as provided by EDR, and dated 04/17/1995 has revealed that there is 1 RAATS site within the searched area.

STATE AND LOCAL RECORDS

CSCSL: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Ecology's Confirmed & Suspected Contaminated Sites List.

A review of the CSCSL list, as provided by EDR, and dated 01/27/2010 has revealed that there are 50

CSCSL NFA: The data set contains information about sites previously on the Confirmed and Suspected Contaminated Sites list that have received a No Further Action (NFA) determination. Because it is necessary to maintain historical records of sites that have been investigated and cleaned up, sites are not deleted from the database when cleanup activities are completed. Instead a No Further Action code is entered based upon the type of NFA determination the site received.

A review of the CSCSL NFA list, as provided by EDR, and dated 01/27/2010 has revealed that there are

EXECUTIVE SUMMARY

28 CSCSL NFA sites within the searched area.

EXECUTIVE SUMMARY

BROWNFIELDS: A listing of brownfields sites included in the Confirmed & Suspected Sites Listing. Brownfields are abandoned, idle or underused commercial or industrial properties, where the expansion or redevelopment is hindered by real or perceived contamination. Brownfields vary in size, location, age, and past use -- they can be anything from a five-hundred acre automobile assembly plant to a small, abandoned corner gas station.

A review of the BROWNFIELDS list, as provided by EDR, and dated 01/27/2010 has revealed that there is 1 BROWNFIELDS site within the searched area.

<u>Site</u>	<u>Address</u>	<u>Map ID</u>	<u>Page</u>
MARS HILL PROPERTIES 50TH LLC	1411 NW 50TH ST	49	429

NPDES: A listing of permitted wastewater facilities.

A review of the NPDES list, as provided by EDR, and dated 01/27/2010 has revealed that there are 19 NPDES sites within the searched area.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Install Date: 1/1/1982
 Capacity: 5,000 to 9,999 Gallons
 Tank Upgrade Date: 12/30/1998
 TankSystem Status: Operational
 TankSystem Status Change Date:8/26/1996
 Tank Status: Operational
 Tank Permit Expiration Date: 3/31/2010
 Tank Closure Date: 1/1/0001
 Tank Pumping System: Pressurized System
 Tank Spill Prevention: Spill Bucket/Spill Box
 Tank Overfill Prevention: Ball Float Valve (vent line)
 Tank Material: Steel
 Tank Construction: Single Wall Tank
 Tank Tightness Test: Not reported
 Tank Corrosion Protection: Impressed Current and Interior Lining
 Pipe Material: Fiberglass
 Pipe Construction: Double Wall Pipe
 Pipe Primary Release Detection: Automatic Line Leak Detection
 Pipe Second Release Detection: Not reported
 Pipe Corrosion Protection: Corrosion Resistant
 Tank Primary Release Detection: Automatic Tank Gauging
 Tank Second Release Detection: Not reported

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US Facility Response Plan (FRP) contains plans for responding, to the maximum extent practical, to worst case discharges of oil.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

PCS (Permit Compliance System) is a computerized management information system that contains data on National Pollutant Discharge Elimination System (NPDES) permit holding facilities. PCS tracks the permit, compliance, and enforcement status of NPDES facilities.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

PCS (Permit Compliance System) is a computerized management information system that contains data on National Pollutant Discharge Elimination System (NPDES) permit holding facilities. PCS tracks the permit, compliance, and enforcement status of NPDES facilities.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Contact email: Not reported
 EPA Region: 10
 Classification: Non-Generator
 Description: Handler: Non-Generators do not presently generate hazardous waste

Owner/Operator Summary:

Owner/operator name: EQUILION ENTERPRISES LLC DBA SHELL OIL P
 Owner/operator address: 12700 NORTHBOROUGH DR NOB 300G04 - RACHEL HULL
 HOUSTON, TX 77067
 Owner/operator country: US
 Owner/operator telephone: Not reported
 Legal status: Private
 Owner/Operator Type: Operator
 Owner/Op start date: 08/09/1996
 Owner/Op end date: Not reported

Handler Activities Summary:

U.S. importer of hazardous waste: No
 Mixed waste (haz. and radioactive): No
 Recycler of hazardous waste: No
 Transporter of hazardous waste: No
 Treater, storer or disposer of HW: No
 Underground injection activity: No
 On-site burner exemption: No
 Furnace exemption: No
 Used oil fuel burner: No
 Used oil processor: No
 User oil refiner: No
 Used oil fuel marketer to burner: No
 Used oil Specification marketer: No
 Used oil transfer facility: No
 Used oil transporter: No
 Off-site waste receiver: Commercial status unknown

Historical Generators:

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to

MAP FINDINGS

 EPA ID Number

Database(s)

PACIFIC FISHERMEN INCORPORATED (Continued)

1000252092

replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

PCS (Permit Compliance System) is a computerized management information system that contains data on National Pollutant Discharge Elimination System (NPDES) permit holding facilities. PCS tracks the permit, compliance, and enforcement status of NPDES facilities.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

PCS (Permit Compliance System) is a computerized management information system that contains data on National Pollutant Discharge Elimination System (NPDES) permit holding facilities. PCS tracks the permit, compliance, and enforcement status of NPDES facilities.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

PCS (Permit Compliance System) is a computerized management information system that contains data on National Pollutant Discharge Elimination System (NPDES) permit holding facilities. PCS tracks the permit, compliance, and enforcement status of NPDES facilities.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate

that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRA-CESQG:

Date form received by agency: 12/06/1995
 Facility name: COWMAN CAMPBELL PAINT CO
 Facility address: 5221 BALLARD AVE NW
 SEATTLE, WA 98107
 EPA ID: WAD009264326
 Mailing address: PO BOX 70328
 SEATTLE, WA 98107-0328
 Contact: RICHARD TABELL
 Contact address: PO BOX 70328
 SEATTLE, WA 98107-0328
 Contact country: US
 Contact telephone: (206)783-8835
 Contact email: Not reported
 EPA Region: 10
 Classification: Conditionally Exempt Small Quantity Generator
 Description: Handler: generates 100 kg or less of hazardous waste per calendar month, and accumulates 1000 kg or less of hazardous waste at any time; or generates 1 kg or less of acutely hazardous waste per calendar month, and accumulates at any time: 1 kg or less of acutely hazardous waste; or 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste; or generates 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste during any calendar month, and accumulates at any time: 1 kg or less of acutely hazardous waste; or 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste

Owner/Operator Summary:

Owner/operator name: HAROLD COWMAN
 Owner/operator address: PO BOX 70328
 SEATTLE, WA 98107
 Owner/operator country: US
 Owner/operator telephone: Not reported
 Legal status: Private
 Owner/Operator Type: Owner
 Owner/Op start date: 12/06/1995
 Owner/Op end date: Not reported

Handler Activities Summary:

U.S. importer of hazardous waste: No
 Mixed waste (haz. and radioactive): No
 Recycler of hazardous waste: No
 Transporter of hazardous waste: No
 Treater, storer or disposer of HW: No
 Underground injection activity: No
 On-site burner exemption: No
 Furnace exemption: No
 Used oil fuel burner: No

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Biennial Reports:

Last Biennial Reporting Year: 2007

Annual Waste Handled:

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Amount (Lbs): 65197.5

Waste code: D002

Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Amount (Lbs): 6637.7

Waste code: D035

Waste name: METHYL ETHYL KETONE

Amount (Lbs): 25488.2

Waste code: F003

Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in

regions and states with cooperative agreements, enforcement actions, and settlements.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US EPA Risk Management Plan (RMP) database stores the risk management plans reported by companies that handle, manufacture, use, or store certain flammable or toxic substances, as required under section 112(r) of the Clean Air Act (CAA).

SSTS (Section Seven Tracking System) evolved from the FIFRA and TSCA Enforcement System (FATES). SSTS tracks the registration of all pesticide-producing establishments and tracks annually the types and amounts of pesticides, active ingredients, and related devices that are produced, sold, or distributed each year.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US Facility Response Plan (FRP) contains plans for responding, to the maximum extent practical, to worst case discharges of oil.

Property Description: Nearly 100-year history of manufacturing, metal working, welding and auto repair. For the past 30 years, the property was used for manufacturing parts for the aerospace industry. Ownership has been with MAMCO Manufacturing who leased part of the property to Neuvant Aerospace in the late 1990s. Current use - the property has been vacant and for sale for the past several years.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This

information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

PCS (Permit Compliance System) is a computerized management information system that contains data on National Pollutant Discharge Elimination System (NPDES) permit holding facilities. PCS tracks the permit, compliance, and enforcement status of NPDES facilities.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Annual Waste Handled:

Waste code: D001
 Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

PCS (Permit Compliance System) is a computerized management information system that contains data on National Pollutant Discharge Elimination System (NPDES) permit holding facilities. PCS tracks the permit, compliance, and enforcement status of NPDES facilities.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

PCS (Permit Compliance System) is a computerized management information system that contains data on National Pollutant Discharge Elimination System (NPDES) permit holding facilities. PCS tracks the permit, compliance, and enforcement status of NPDES facilities.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

US EPA Air Quality System (AQS) contains ambient air pollution data collected by EPA, State, Local, and Tribal air pollution control agencies from thousands of monitoring stations.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Contact country: US
 Contact telephone: (206)285-2400
 Contact email: Not reported
 EPA Region: 10
 Land type: Private
 Classification: Non-Generator
 Description: Handler: Non-Generators do not presently generate hazardous waste

Owner/Operator Summary:

Owner/operator name: TOC HOLDINGS CO.
 Owner/operator address: 2737 W COMMODORE WAY
 SEATTLE, WA 98199
 Owner/operator country: US
 Owner/operator telephone: Not reported
 Legal status: Private
 Owner/Operator Type: Operator
 Owner/Op start date: 06/18/1996
 Owner/Op end date: Not reported

Handler Activities Summary:

U.S. importer of hazardous waste: No
 Mixed waste (haz. and radioactive): No

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Biennial Reports:

Last Biennial Reporting Year: 2007

Annual Waste Handled:

Waste code: D002
 Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
 Amount (Lbs): 65968

Waste code: D007
 Waste name: CHROMIUM
 Amount (Lbs): 75918

Waste code: F006
 Waste name: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.
 Amount (Lbs): 9950

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Description: Handler: Non-Generators do not presently generate hazardous waste

Owner/Operator Summary:

Owner/operator name: COLOR TECH
 Owner/operator address: 434 N 35TH ST
 SEATTLE, WA 98103
 Owner/operator country: US
 Owner/operator telephone: Not reported
 Legal status: Private
 Owner/Operator Type: Operator
 Owner/Op start date: 01/01/1997
 Owner/Op end date: Not reported

Handler Activities Summary:

U.S. importer of hazardous waste: No
 Mixed waste (haz. and radioactive): No
 Recycler of hazardous waste: No
 Transporter of hazardous waste: No
 Treater, storer or disposer of HW: No
 Underground injection activity: No
 On-site burner exemption: No
 Furnace exemption: No
 Used oil fuel burner: No
 Used oil processor: No
 User oil refiner: No
 Used oil fuel marketer to burner: No
 Used oil Specification marketer: No
 Used oil transfer facility: No
 Used oil transporter: No
 Off-site waste receiver: Commercial status unknown

Biennial Reports:

Last Biennial Reporting Year: 2007

Annual Waste Handled:

Waste code: D001
 Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
 Amount (Lbs): 8752

Waste code: D002
 Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
 Amount (Lbs): 6288

Waste code: D005
 Waste name: BARIUM
 Amount (Lbs): 3825

Waste code: D006
 Waste name: CADMIUM

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the

MAP FINDINGS

Map ID
 Direction
 Distance
 Distance (ft.)Site

EDR ID Number
 EPA ID Number

Database(s)

WESMAR COMPANY INC (Continued)

1000295996

Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

SSTS (Section Seven Tracking System) evolved from the FIFRA and TSCA Enforcement System (FATES). SSTS tracks the registration of all pesticide-producing establishments and tracks annually the types and amounts of pesticides, active ingredients, and related devices that are produced, sold, or distributed each year.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Classification: Non-Generator
 Description: Handler: Non-Generators do not presently generate hazardous waste

Owner/Operator Summary:

Owner/operator name: WAYNE WENZEL
 Owner/operator address: 425 PONTIUS AVE N STE 203
 SEATTLE, WA 98109
 Owner/operator country: US
 Owner/operator telephone: Not reported
 Legal status: Private
 Owner/Operator Type: Operator
 Owner/Op start date: 02/12/2003
 Owner/Op end date: Not reported

Handler Activities Summary:

U.S. importer of hazardous waste: No
 Mixed waste (haz. and radioactive): No
 Recycler of hazardous waste: No
 Transporter of hazardous waste: No
 Treater, storer or disposer of HW: No
 Underground injection activity: No
 On-site burner exemption: No
 Furnace exemption: No
 Used oil fuel burner: No
 Used oil processor: No
 User oil refiner: No
 Used oil fuel marketer to burner: No
 Used oil Specification marketer: No
 Used oil transfer facility: No
 Used oil transporter: No
 Off-site waste receiver: Commercial status unknown

Historical Generators:

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Land type: Private
 Classification: Conditionally Exempt Small Quantity Generator
 Description: Handler: generates 100 kg or less of hazardous waste per calendar month, and accumulates 1000 kg or less of hazardous waste at any time; or generates 1 kg or less of acutely hazardous waste per calendar month, and accumulates at any time: 1 kg or less of acutely hazardous waste; or 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste; or generates 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste during any calendar month, and accumulates at any time: 1 kg or less of acutely hazardous waste; or 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste

Owner/Operator Summary:

Owner/operator name: UNIVERSITY SWAGING CORP
 Owner/operator address: 840 NW 45TH ST
 SEATTLE, WA 98107
 Owner/operator country: US
 Owner/operator telephone: Not reported
 Legal status: Private
 Owner/Operator Type: Operator
 Owner/Op start date: 08/23/1996
 Owner/Op end date: Not reported

Handler Activities Summary:

U.S. importer of hazardous waste: No
 Mixed waste (haz. and radioactive): No
 Recycler of hazardous waste: No
 Transporter of hazardous waste: No
 Treater, storer or disposer of HW: No
 Underground injection activity: No
 On-site burner exemption: No
 Furnace exemption: No
 Used oil fuel burner: No
 Used oil processor: No
 User oil refiner: No
 Used oil fuel marketer to burner: No
 Used oil Specification marketer: No
 Used oil transfer facility: No
 Used oil transporter: No
 Off-site waste receiver: Commercial status unknown

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Biennial Reports:

Last Biennial Reporting Year: 2007

Annual Waste Handled:

Waste code: D001
 Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Land type: Private
 Classification: Conditionally Exempt Small Quantity Generator
 Description: Handler: generates 100 kg or less of hazardous waste per calendar month, and accumulates 1000 kg or less of hazardous waste at any time; or generates 1 kg or less of acutely hazardous waste per calendar month, and accumulates at any time: 1 kg or less of acutely hazardous waste; or 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste; or generates 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste during any calendar month, and accumulates at any time: 1 kg or less of acutely hazardous waste; or 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste

Owner/Operator Summary:

Owner/operator name: ALASKA DIESEL ELECTRIC, INC.
 Owner/operator address: 4420 14TH AVENUE NW
 SEATTLE, WA 98107
 Owner/operator country: US
 Owner/operator telephone: Not reported
 Legal status: Private
 Owner/Operator Type: Operator
 Owner/Op start date: 04/15/1993
 Owner/Op end date: Not reported

Handler Activities Summary:

U.S. importer of hazardous waste: No
 Mixed waste (haz. and radioactive): No
 Recycler of hazardous waste: No
 Transporter of hazardous waste: No
 Treater, storer or disposer of HW: No
 Underground injection activity: No
 On-site burner exemption: No
 Furnace exemption: No
 Used oil fuel burner: No
 Used oil processor: No
 User oil refiner: No
 Used oil fuel marketer to burner: No
 Used oil Specification marketer: No
 Used oil transfer facility: No
 Used oil transporter: No
 Off-site waste receiver: Commercial status unknown

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

PCS (Permit Compliance System) is a computerized management information system that contains data on National Pollutant Discharge Elimination System (NPDES) permit holding facilities. PCS tracks the permit, compliance, and enforcement status of NPDES facilities.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

PCS (Permit Compliance System) is a computerized management information system that contains data on National Pollutant Discharge Elimination System (NPDES) permit holding facilities. PCS tracks the permit, compliance, and enforcement status of NPDES facilities.

facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Biennial Reports:

Last Biennial Reporting Year: 2007

Annual Waste Handled:

Waste code: D001
 Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Amount (Lbs): 3869.1

Waste code: D002
 Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Amount (Lbs): 494

Waste code: D008
 Waste name: LEAD
 Amount (Lbs): 412.5

Waste code: D035
 Waste name: METHYL ETHYL KETONE
 Amount (Lbs): 58

Waste code: F002
 Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2-TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

PCS (Permit Compliance System) is a computerized management information system that contains data on National Pollutant Discharge Elimination System (NPDES) permit holding facilities. PCS tracks the permit, compliance, and enforcement status of NPDES facilities.

 Facility Name: Trident Seafood FV Southern Wind
 Latitude Decimal Degrees: 47.656892999999997
 Longitude Decimal Degrees: -122.36483200000001
 Coordinate Point Areal Extent Code: 99
 Horizontal Accuracy Code: 99
 Coordinate Point Geographic Position Code: 99
 Location Verified Code: F

WA MANIFEST:

Facility Site ID Number: 96437592
 SWC Desc: D001, D002, D005, D007, D008, D035, F002, F003, F005
 FWC Desc: WP01, WP02, WT02
 Form Comm: Wastes from fishing vessels being worked on at facility and wastes from remote company facilities in Alaska.
 Data Year: 2008
 Permit by Rule: False
 Treatment by Generator: False
 Mixed radioactive waste: False
 Importer of hazardous waste: False
 Immediate recycler: False
 Treatment/Storage/Disposal/Recycling Facility: False
 Generator of dangerous fuel waste: False
 Generator marketing to burner: False
 "Other marketers (i.e., blender, distributor, etc.)": False
 Utility boiler burner: False
 Industry boiler burner: False
 Industrial Furnace: False
 Smelter defferal: False
 Universal waste - batteries - generate: False
 Universal waste - thermostats - generate: False
 Universal waste - mercury - generate: False
 Universal waste - lamps - generate: False
 Universal waste - batteries - accumulate: False
 Universal waste - thermostats - accumulate: False
 Universal waste - mercury - accumulate: False
 Universal waste - lamps - accumulate: False
 Destination Facility for Universal Waste: False
 Off-specification used oil burner - utility boiler: False
 Off-specification used oil burner - industrial boiler: False
 Off-specification used oil burner - industrial furnace: False
 EPA ID: WAD063362370
 Facility Address 2: Not reported

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region

that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

PCS (Permit Compliance System) is a computerized management information system that contains data on National Pollutant Discharge Elimination System (NPDES) permit holding facilities. PCS tracks the permit, compliance, and enforcement status of NPDES facilities.

Biennial Reports:

Last Biennial Reporting Year: 2007

Annual Waste Handled:

Waste code: D001
 Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

PCS (Permit Compliance System) is a computerized management information system that contains data on National Pollutant Discharge Elimination System (NPDES) permit holding facilities. PCS tracks the permit, compliance, and enforcement status of NPDES facilities.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

CSCSL:

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

FEDERAL RECORDS

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 03/31/2010	Source: EPA

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 03/31/2010	Source: EPA
Date Data Arrived at EDR: 04/02/2010	Telephone: N/A
Date Made Active in Reports: 04/12/2010	Last EDR Contact: 05/07/2010
Number of Days to Update: 10	Next Scheduled EDR Contact: 07/26/2010
	Data Release Frequency: Quarterly

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991	Source: EPA
Date Data Arrived at EDR: 02/02/1994	Telephone: 202-564-4267
Date Made Active in Reports: 03/30/1994	Last EDR Contact: 03/01/2010
Number of Days to Update: 56	Next Scheduled EDR Contact: 05/31/2010
	Data Release Frequency: No Update Planned

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 01/29/2010	Source: EPA
Date Data Arrived at EDR: 02/09/2010	Telephone: 703-412-9810
Date Made Active in Reports: 04/12/2010	Last EDR Contact: 05/07/2010
Number of Days to Update: 62	Next Scheduled EDR Contact: 07/12/2010
	Data Release Frequency: Quarterly

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

	Data Release Frequency: Quarterly

LIENS 2: CERCLA Lien Information

A Federal CERCLA ('Superfund') lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. These monies are spent to investigate and address releases and threatened releases of contamination. CERCLIS provides information as to the identity of these sites and properties.

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

FINDS: Facility Index System/Facility Registry System

Facility Index System. FINDS contains both facility information and 'pointers' to other sources that contain more detail. EDR includes the following FINDS databases in this report: PCS (Permit Compliance System), AIRS (Aerometric Information Retrieval System), DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes), FURS (Federal Underground Injection Control), C-DOCKET (Criminal Docket System used to track criminal enforcement actions for all environmental statutes), FFIS (Federal Facilities Information System), STATE (State Environmental Laws and Statutes), and PADS (PCB Activity Data System).

Date of Government Version: 10/19/2009	Source: EPA
Date Data Arrived at EDR: 10/22/2009	Telephone: (206) 553-1200
Date Made Active in Reports: 12/01/2009	Last EDR Contact: 03/15/2010
Number of Days to Update: 40	Next Scheduled EDR Contact: 06/28/2010
	Data Release Frequency: Quarterly

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

SCRD DRYCLEANERS: State Coalition for Remediation of Drycleaners Listing

The State Coalition for Remediation of Drycleaners was established in 1998, with support from the U.S. EPA Office of Superfund Remediation and Technology Innovation. It is comprised of representatives of states with established drycleaner remediation programs. Currently the member states are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin.

	Data Release Frequency: Varies

US HIST CDL: National Clandestine Laboratory Register

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 09/01/2007	Source: Drug Enforcement Administration
Date Data Arrived at EDR: 11/19/2008	Telephone: 202-307-1000

STATE AND LOCAL RECORDS

CSCSL: Confirmed and Suspected Contaminated Sites List

State Hazardous Waste Sites. State hazardous waste site records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. Available information varies by state.

Date of Government Version: 01/27/2010	Source: Department of Ecology
Date Data Arrived at EDR: 01/29/2010	Telephone: 360-407-7200

Number of Days to Update: 5	Next Scheduled EDR Contact: 05/31/2010
	Data Release Frequency: Semi-Annually

ALLSITES: Facility/Site Identification System Listing

Information on facilities and sites of interest to the Department of Ecology.

Date of Government Version: 02/09/2010	Source: Department of Ecology
Date Data Arrived at EDR: 02/11/2010	Telephone: 360-407-6423
Date Made Active in Reports: 02/24/2010	Last EDR Contact: 11/10/2009
Number of Days to Update: 13	Next Scheduled EDR Contact: 02/22/2010
	Data Release Frequency: Quarterly

CSCSL NFA: Confirmed and Contaminated Sites - No Further Action

The data set contains information about sites previously on the Confirmed and Suspected Contaminated Sites list that have received a No Further Action (NFA) determination. Because it is necessary to maintain historical records of sites that have been investigated and cleaned up, sites are not deleted from the database when cleanup activities are completed. Instead, a No Further Action code is entered based upon the type of NFA determination the site received.

Date of Government Version: 01/27/2010	Source: Department of Ecology
Date Data Arrived at EDR: 01/29/2010	Telephone: 360-407-7170

INDIAN UST R8: Underground Storage Tanks on Indian Land

The Indian Underground Storage Tank (UST) database provides information about underground storage tanks on Indian land in EPA Region 8 (Colorado, Montana, North Dakota, South Dakota, Utah, Wyoming and 27 Tribal Nations).

Date of Government Version: 02/25/2010	Source: EPA Region 8
Date Data Arrived at EDR: 02/25/2010	Telephone: 303-312-6137
Date Made Active in Reports: 04/12/2010	Last EDR Contact: 05/03/2010
Number of Days to Update: 46	Next Scheduled EDR Contact: 08/16/2010
	Data Release Frequency: Quarterly

INDIAN UST R10: Underground Storage Tanks on Indian Land

The Indian Underground Storage Tank (UST) database provides information about underground storage tanks on Indian land in EPA Region 10 (Alaska, Idaho, Oregon, Washington, and Tribal Nations).

Date of Government Version: 02/02/2010	Source: EPA Region 10
Date Data Arrived at EDR: 02/03/2010	Telephone: 206-553-2857
Date Made Active in Reports: 02/18/2010	Last EDR Contact: 05/03/2010
Number of Days to Update: 15	Next Scheduled EDR Contact: 08/16/2010
	Data Release Frequency: Quarterly

INDIAN UST R4: Underground Storage Tanks on Indian Land

The Indian Underground Storage Tank (UST) database provides information about underground storage tanks on Indian land in EPA Region 4 (Alabama, Florida, Georgia, Kentucky, Mississippi, North Carolina, South Carolina, Tennessee and Tribal Nations)

Date of Government Version: 03/10/2010	Source: EPA Region 4
Date Data Arrived at EDR: 03/16/2010	Telephone: 404-562-9424
Date Made Active in Reports: 04/12/2010	Last EDR Contact: 05/03/2010
Number of Days to Update: 27	Next Scheduled EDR Contact: 08/16/2010
	Data Release Frequency: Semi-Annually

INDIAN UST R6: Underground Storage Tanks on Indian Land

The Indian Underground Storage Tank (UST) database provides information about underground storage tanks on Indian land in EPA Region 6 (Louisiana, Arkansas, Oklahoma, New Mexico, Texas and 65 Tribes).

Date of Government Version: 02/08/2010	Source: EPA Region 6
Date Data Arrived at EDR: 02/09/2010	Telephone: 214-665-7591
Date Made Active in Reports: 02/18/2010	Last EDR Contact: 05/03/2010
Number of Days to Update: 9	Next Scheduled EDR Contact: 08/16/2010
	Data Release Frequency: Semi-Annually

INDIAN UST R5: Underground Storage Tanks on Indian Land

The Indian Underground Storage Tank (UST) database provides information about underground storage tanks on Indian land in EPA Region 5 (Michigan, Minnesota and Wisconsin and Tribal Nations).

Date of Government Version: 02/11/2010	Source: EPA Region 5
Date Data Arrived at EDR: 02/11/2010	Telephone: 312-886-6136
Date Made Active in Reports: 04/12/2010	Last EDR Contact: 05/03/2010
Number of Days to Update: 60	Next Scheduled EDR Contact: 08/16/2010
	Data Release Frequency: Varies

INDIAN UST R7: Underground Storage Tanks on Indian Land

The Indian Underground Storage Tank (UST) database provides information about underground storage tanks on Indian land in EPA Region 7 (Iowa, Kansas, Missouri, Nebraska, and 9 Tribal Nations).

Date of Government Version: 04/01/2008	Source: EPA Region 7
Date Data Arrived at EDR: 12/30/2008	Telephone: 913-551-7003
Date Made Active in Reports: 03/16/2009	Last EDR Contact: 02/01/2010
Number of Days to Update: 76	Next Scheduled EDR Contact: 05/17/2010
	Data Release Frequency: Varies

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

INDIAN UST R1: Underground Storage Tanks on Indian Land

The Indian Underground Storage Tank (UST) database provides information about underground storage tanks on Indian land in EPA Region 1 (Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, Vermont and ten Tribal Nations).

Date of Government Version: 02/19/2009	Source: EPA, Region 1
Date Data Arrived at EDR: 02/19/2009	Telephone: 617-918-1313

Number of Days to Update: 27	Next Scheduled EDR Contact: 07/20/2009
	Data Release Frequency: Varies

EDR PROPRIETARY RECORDS

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

COUNTY RECORDS

KING COUNTY:

Abandoned Landfill Study in King County

The King County Abandoned Landfill Survey was conducted from October through December 1984 by the Health Department's Environmental Health Division at the request of the King County Council. The primary objective of the survey was to determine if any public health problems existed at the predetermined 24 sites.

Date of Government Version: 04/30/1985	Source: Seattle-King County Department of Public Health
Date Data Arrived at EDR: 11/07/1994	Telephone: 206-296-4785

	Data Release Frequency: No Update Planned

SNOHOMISH COUNTY:

Solid Waste Sites of Record at Snohomish Health District

Solid waste disposal and/or utilization sites in Snohomish County.

Date of Government Version: 10/01/2008	Source: Snohomish Health District
Date Data Arrived at EDR: 01/30/2009	Telephone: 206-339-5250
Date Made Active in Reports: 03/24/2009	Last EDR Contact: 03/30/2010
Number of Days to Update: 33	Next Scheduled EDR Contact: 07/12/2010
	Data Release Frequency: Semi-Annually

TACOMA/PIERCE COUNTY:

Closed Landfill Survey

Following numerous requests for information about closed dumpsites and landfills in Pierce County, the Tacoma-Pierce County Health Department decided to conduct a study on the matter. The aim of the study was to evaluate public health risks associated with the closed dumpsites and landfills, and to determine the need, if any, for further investigations of a more detailed nature. The sites represent all of the known dumpsites and landfills closed after 1950.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health
Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics
Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Daycare Center Listing

Source: Department of Social & Health Services

Telephone: 253-383-1735

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2009 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.
