EXECUTIVE SUMMARY

The Seattle Department of Transportation (SDOT) Capital Projects and Roadway Structures Annual Report provides information about SDOT's key structural assets: Bridges, Retaining Walls, Stairways, and Areaways. It also highlights capital improvement projects that were completed in 2016.

Combined, these assets represent over \$5.2 billion in replacement value.

119 Bridges 	587 Retaining Walls	498 Stairways 	238 Areaways
\$4.0B	\$1.05B	\$63.0M	\$15.3M

Through careful management, Roadway Structures maximizes investments in Seattle's transportation infrastructure, preserves existing facilities, manages capital improvements, and maintains and operates these assets to provide a safe and reliable transportation system for the traveling public.

LEFT: Sand Point Way NE
retaining wall replacement

This Annual Report summarizes the inventory, condition, and operation and maintenance of 119 bridges, 587 retaining walls, 498 stairways, and 238 areaways.

Roadway Structures operates SDOT's four movable bridges, three of which are along the Lake Washington Ship Canal. Bridge Operations staff complies with Coast Guard regulations by ensuring these four movable bridges are available for vessel openings 24 hours a day, seven days a week. Among these is one of the world's busiest bascule bridges – the Fremont Bridge which has opened more than 500,000 times during its lifetime!

Making capital improvements to transportation structures ensures these assets remain safe and available to the traveling public.

Roadway Structures considers many factors before recommending a structure for replacement, including a detailed “element-level” condition assessment – in compliance with Federal Highway Administration (FHWA) guidelines – that compares the condition of the structure to other bridges throughout the U.S. This assessment, along with other local factors, provides for a prioritization process that fits with SDOT's vision and goals, particularly to ensure public safety.

At this point in the city's infrastructure life, there needs to be a plan for the second generation of bridges. Annual investments can provide funding that allows for a planned approach to replacement. The dollars can be leveraged with federal bridge replacement funds minimizing the strain on local dollars. While this is an attainable goal for many of our average- to smaller-sized bridges, there is still a lack of funding for larger bridge projects, such as the replacement Magnolia Bridge and improvements to the Ballard Bridge.

Our dedicated, skilled craft workers, bridge operators, and engineering staff assure this goal is attained, all working together to increase mobility and improve public options to Move Seattle.

INTRODUCTION

Roadway Structures' mission is to preserve existing infrastructure and manage capital improvements, while maintaining and operating bridges, retaining walls, stairways, and areaways to provide safe and reliable transportation structures and make the most of Seattle's investments in transportation.

There are three sections within Roadway Structures: Bridge Engineering, Bridge Maintenance, and Bridge Operations.

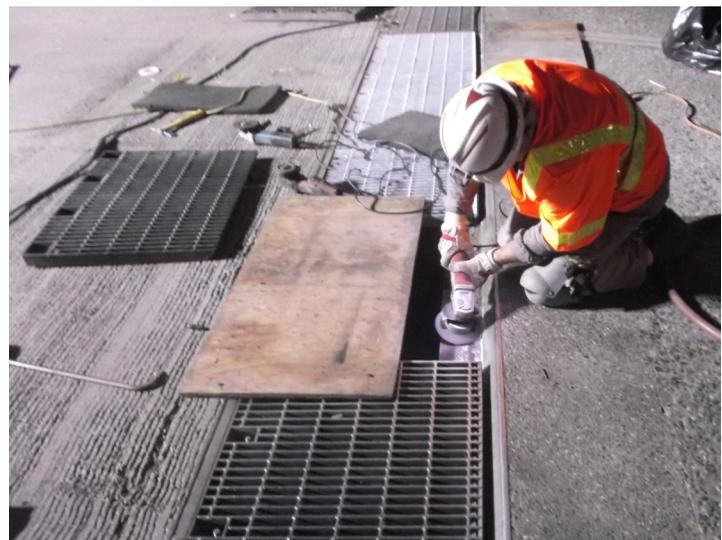

This report summarizes the inventory, inspection, condition, and operation maintenance of SDOT's structures: bridges, stairways, retaining walls, and areaways.

BOTTOM RIGHT: Work on Emerson Bridge grating replacement

BRIDGES

Inventory

SDOT has a varying level of responsibility for nearly 330 bridges. Not all of these bridges are within city limits.

- SDOT has sole ownership of and full maintenance responsibility for 119 bridges
- SDOT performs partial maintenance and inspection on 40 bridges
- SDOT performs inspection only on 89 other agency or privately-owned structures in public right of way
- SDOT performs reimbursable inspection on 64 bridges on behalf of other agencies

Inspection

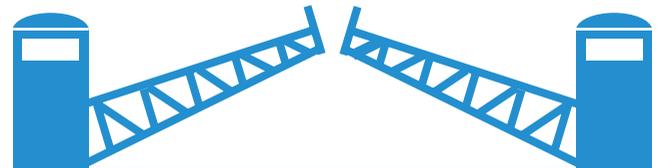

Federal law 23 CFR 650 defines Nation Bridge Inspection Standards and requires public agencies to perform a routine inspection on all bridges at least once every 24 months. However, some bridges are inspected more frequently so SDOT has the most current condition data. SDOT also monitors five bridges electronically, 24 hours a day and seven days a week to ensure public safety. In addition to the routine inspection, some bridges require other inspection because of their unique features, such as Underwater Dive Inspection or Under Bridge Inspection Truck (UBIT) inspection.

Bridge inspections completed in 2016:

- 87 routine inspections
- 14 Under Bridge Inspection Trucks (UBIT)
- 7 fracture critical
- 4 underwater
- 2 special
- 55 other agency or private bridges
- 5 electronically monitored

BRIDGES BY COUNCIL DISTRICT

District 1	21	17.6%
District 2	19	16.0%
District 3	13	10.9%
District 4	12	10.1%
District 5	14	11.8%
District 6	13	10.9%
District 7	27	22.7%

119

SDOT has sole ownership and full maintenance responsibility

89

SDOT performs inspection only on other agency or privately owned structures in public right of way

40

SDOT performs partial maintenance and inspection

64

SDOT performs reimbursable inspection on other agency's behalf

21

SDOT performs reimbursable maintenance

See Appendix A for a bridge index. The replacement value of SDOT bridges is \$4.0 billion; this equates to 2,935,000 square feet of bridge deck.

General Condition

SDOT appraises bridge condition by using a bridge management system (BMS) and following guidelines prescribed by the FHWA and the Washington State Bridge Inspection Manual. SDOT identifies a variety of elements for each bridge, including footings, columns, cross beams, girders, decks, and railing.

Each bridge has a Sufficiency Rating (SR). This rating is determined by following FHWA guidelines. SDOT's average SR is 68.60. The slight improvement from 2012 average SR is a result of the work completed during the

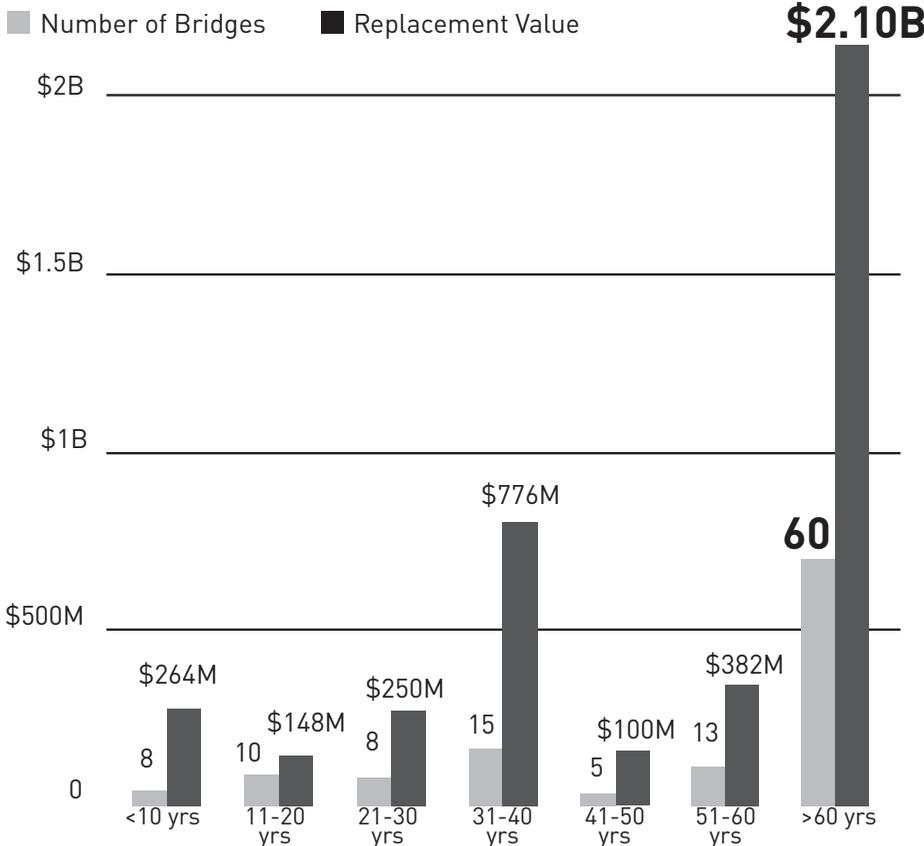

"Bridging the Gap" funding program, and is the effect of adding new bridge structures totaling 8% of all bridges in the city.

The average age of bridges in Seattle is 61 years old, which indicates that most of Seattle bridges are approaching or have already exceeded their design life.

FHWA sets standards for two types of deficient bridges: Structurally Deficient (SD) and Functionally Obsolete (FO). Structurally Deficient bridges have conditions that may reduce the bridge's ability to carry normal traffic and have at least one major element rated in poor condition.

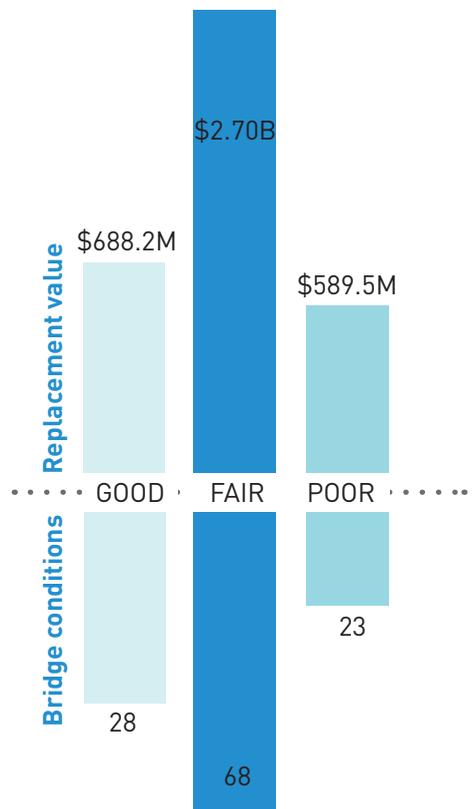

A Functionally Obsolete bridge has geometry or clearance aspects that no longer meet current traffic standards.

BRIDGE REPLACEMENT COST BY AGE

BRIDGE CONDITIONS & REPLACEMENT VALUE

TOTAL BRIDGES: 119

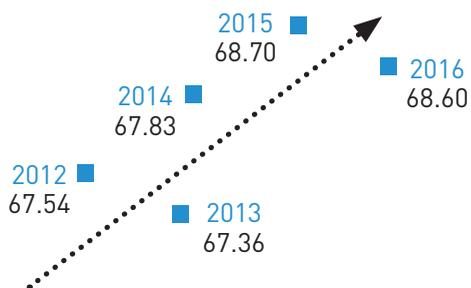

In 2016, 47 bridges were FO and 9 bridges were SD. The chart and graphs below show SDOT condition and replacement value by condition.

As a method to prioritize replacement or rehabilitation projects, Roadway Structures has developed a Structure Rating Code, which is a weighted combination of the SR and Project Rating Criteria (PRC).

PRC includes additional local factors that are not part of the FHWA guidelines, such as: public safety, preserving public investment in infrastructure, regional equity, and economic impacts.

A bridge's age is often an indicator of relative condition. The average age of bridges in Seattle is 61 years old, which indicates that most of Seattle bridges are approaching or have already exceeded their design life. Bridges constructed 60 years ago were typically designed to last 50 to 60 years.

AVERAGE SUFFICIENCY RATING (RISING)
TOTAL BRIDGES: 119

Magnolia & Ballard Bridges

SDOT has many challenging bridge maintenance needs, including those on the Magnolia and Ballard Bridges. Funding from the Move Seattle Levy provides resources to conduct studies on transportation solutions for these two critical pieces of infrastructure.

MAGNOLIA BRIDGE

Special weight testing on the bridge was recently performed by SDOT. This testing confirmed the bridge continues to be safe for vehicle travel. However, the bridge continues to show age related deterioration. SDOT's Bridge Engineering group performs special inspections twice a year to monitor areas that show the greatest rate of deterioration. In 2016 repairs were made to expansion joints and bridge bearing locations. SDOT continues to invest significant maintenance dollars to maintain this important connection, until a replacement option can be funded.

With the bridge nearing the end of its service life, funding from the Move Seattle Levy will support a planning effort to evaluate options to address mid and long term needs associated with the Magnolia Bridge. The City is identifying the transportation, community, and zoning changes that have occurred since the post-Nisqually Earthquake Type, Size, and Location (TS&L) study that recommended bridge replacement alternatives. This planning project will build upon the information and resources that were developed from the previous TS&L study.

BALLARD BRIDGE

The Ballard Bridge is safe for legal weight vehicles to travel on. SDOT's current focus is on bike, pedestrian and vehicle safety improvements. In 2017 SDOT will install features on the north end of the bridge to improve bicycle travel on 15th Avenue W. The City continues to conduct bridge inspections to identify and respond to maintenance needs. Current and future maintenance work include, repairing deteriorated and aging expansion joints, repainting the bridge, and maintaining the mechanical and electrical systems.

With the increase in transit ridership and residences in both the Magnolia and Ballard communities, funding was provided through the Move Seattle Levy to evaluate opportunities to make the existing bridge safer for pedestrians and cyclists and to plan for the future rehabilitation or replacement of the bridge. Part of the planning study will be to evaluate the current and future changes in the surrounding communities, as well as interactions between existing and future transit improvements and any decision associated with either the rehabilitation or replacement of the existing bridge.

LEFT: Magnolia Bridge
RIGHT: Ballard Bridge

Movable Bridge Operations

SDOT owns and operates four movable bridges. Three of the bridges cross the Lake Washington Ship Canal: Ballard Bridge, Fremont Bridge, and University Bridge. The fourth bridge, the Southwest Spokane Street Bridge, spans the west waterway of the Duwamish River. These four bridges operate 24 hours a day, 7 days a week, 365 days per year.

SDOT operates and maintains the South Park Bridge on behalf of King County. The bridge is located over the Duwamish Waterway and also operates 24 hours a day all year long.

King County reimburses SDOT for all operations and maintenance costs.

The U.S. Coast Guard manages navigable waterways within the United States. Federal law CFR 33 Chapter 11, enacted in 1894, requires bridges to be permitted and, in general, not restrict navigation. The permits for the Ship Canal bridges allow for a period during peak commute hours when the bridges may not be opened to boat traffic. However, there is no restricted period on the Spokane Swing Bridge.

Overall, there were 15,174 bridge openings in 2016 for all five movable bridges operated by SDOT, about 42 bridge openings per day.

MOVABLE BRIDGE OPENINGS – 2012-2016

	2012	2013	2014	2015	2016
Fremont	5,410	5,779	5,654	5,619	5,686
Ballard	4,261	3,982	4,057	3,836	4,052
University	2,923	3,126	3,255	3,002	2,924
Spokane	1,473	1,707	1,831	1,863	1,747
South Park			655	1,146	765
TOTAL	14,067	14,594	15,452	15,466	15,174

South Park Bridge became operational on July 21, 2014

RETAINING WALLS

Inventory

Roadway Structures manages 587 retaining walls and seawalls, valued at \$1,048,173,537. The Elliott Bay Seawall is the city's longest retaining wall at more than 7,000 feet. The south half of the Elliott Bay Seawall is currently being replaced. At right is a chart that shows where retaining walls are located throughout the city. For an inventory of retaining walls, see Appendix B.

Inspection and Condition

Roadway Structures aims to inspect retaining walls once every five years (compared to every two years for bridges). In 2016, Roadway Structures inspected 38 walls.

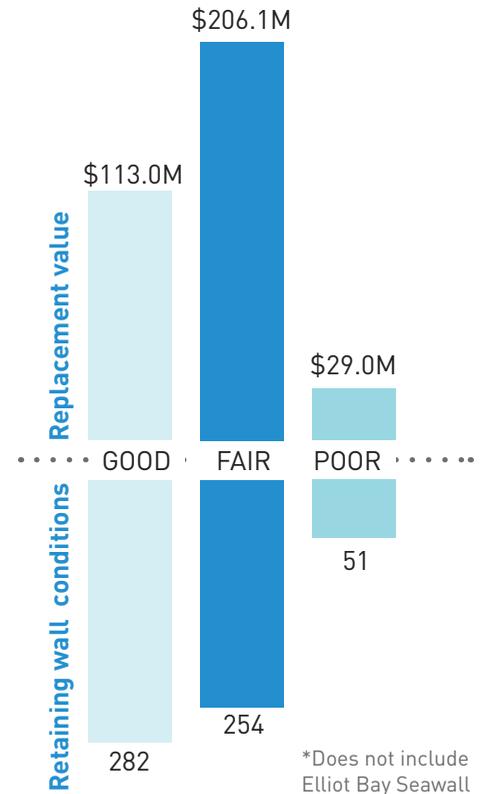

Inspection includes rating retaining wall elements used to develop a relative condition comparison. The chart at right shows the relative condition of SDOT-managed retaining walls.

RETAINING WALL REGIONAL STATISTICS

District 1	104	17.7%
District 2	60	10.2%
District 3	105	17.9%
District 4	35	6.0%
District 5	43	7.3%
District 6	48	8.2%
District 7	192	32.7%

RETAINING WALL CONDITIONS & REPLACEMENT VALUE

TOTAL RETAINING WALLS: 587*

RIGHT: Wall at Rainier Ave S & S Pilgrim
LEFT: Wall at Magnolia Way & Garfield

STAIRWAYS

Inventory

Roadway Structures is also responsible for 498 stairways within Seattle, worth \$63M. For an inventory of stairways, see Appendix C.

STAIRWAYS REGIONAL STATISTICS

District 1	84	16.9%
District 2	78	15.7%
District 3	105	21.1%
District 4	37	7.4%
District 5	16	3.2%
District 6	32	6.4%
District 7	146	29.3%

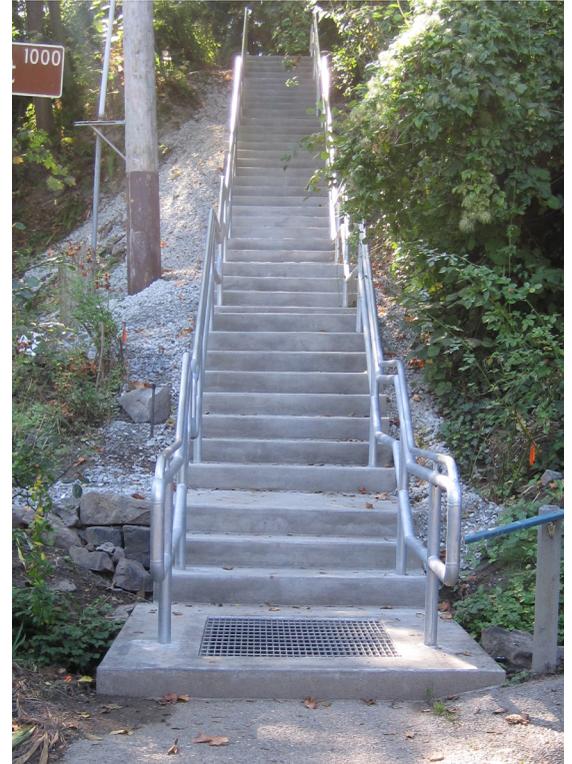

Inspection and Condition

Roadway Structures inspects stairways every seven years, and monitors them for safety and condition. Rating stairway elements allows SDOT to develop a relative condition comparison. Roadway Structures completed 100 inspections in 2016.

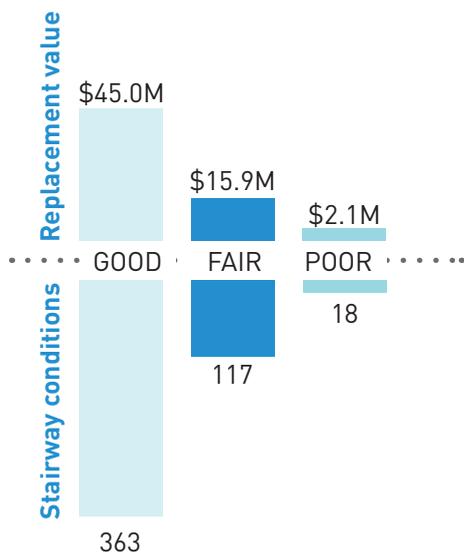

The chart below shows the relative condition of SDOT-managed stairways.

Stairway conditions has greatly improved due to consistent rehabilitation funding over the past 10 years.

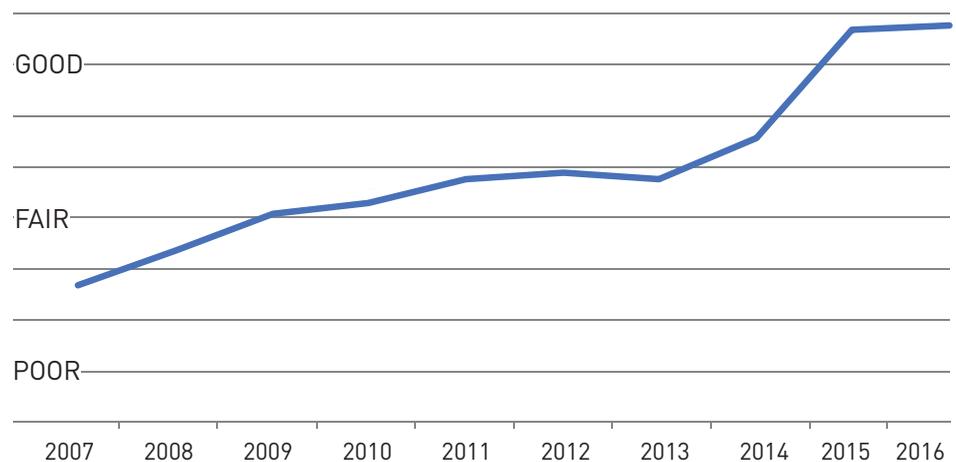

RIGHT: Stairway at 26th Ave E & E Prospect St

STAIRWAY CONDITIONS & REPLACEMENT VALUE TOTAL STAIRWAYS: 498

AVERAGE STAIRWAY CONDITION

AREAWAYS

SDOT maintains an inventory of 238 areaways. The estimated replacement value of known areaways is \$153M. For an inventory of areaways, see Appendix D.

Areaways are different than other Roadway Structure assets because they consist of a combination of structure types and may have multiple owners.

Areaways are generally constructed with three elements: building wall, street wall, and structural sidewalk.

The building wall and structural sidewalk are predominately owned by the adjacent property owner, whereas the street wall may be the

responsibility of SDOT or the adjacent property owner.

Inspections have been completed on known areaways in the Pioneer Square District and on many outside of this district.

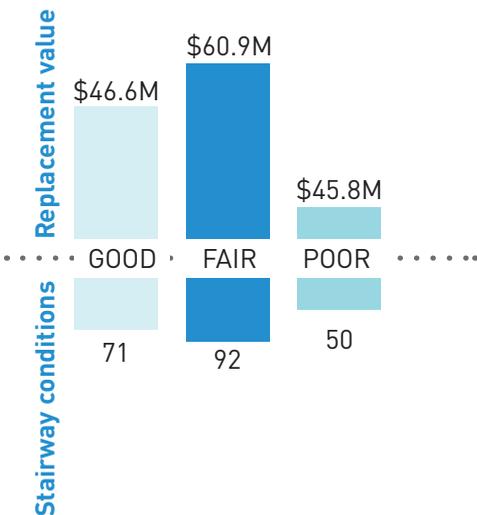

Many areaways were built over 100 years ago and were not built to today's standards. In addition, many have deteriorated to the point where they are much weaker than when they were first built. Therefore, an areaway rated "good" does not necessarily mean that it meets today's standard of design, but it instead does not have a condition that presents an immediate public safety concern.

AREAWAYS BY COUNCIL DISTRICT*

District 2	56	23.5%
District 3	4	1.7%
District 6	1	0.4%
District 7	177	74.4%

*Areaways not located in unlisted Council districts.

AREAWAY CONDITIONS & REPLACEMENT VALUE TOTAL STAIRWAYS: 238

BELOW: Areaway inspection

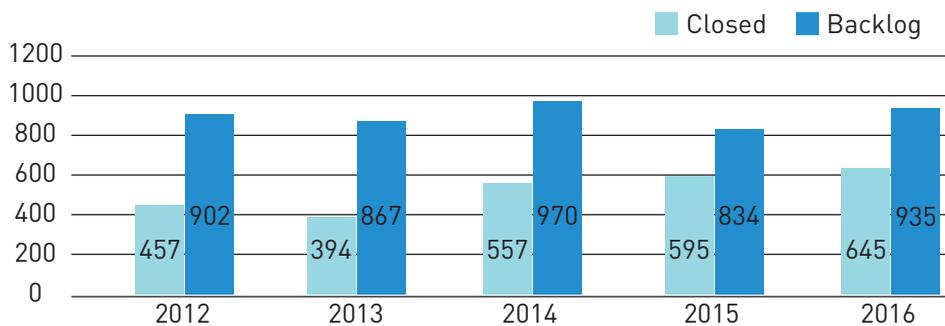

WORK MANAGEMENT

The Roadway Structures Work Management System is the method used to identify, prioritize, assign, and track repair and maintenance work. A detailed prioritization system assures highest-priority work is completed first.

SDOT is not funded at a level to repair all maintenance defects identified annually. This results in a backlog of deferred maintenance.

Major bridge rehabilitation work, via the Capital Projects division, eliminates a large number of work orders at one time. Those work orders are then closed, but not counted as completed because the defect was removed by way of rehabilitation and not by SDOT's maintenance crews. As of December 31, 2016, there is a backlog of 935 work orders, at a value of over \$10 million.

WORK ORDER BACKLOG BY YEAR

RIGHT: Stairway maintenance crew on S Ferdinand St
 ABOVE: University Bridge expansion spill work.

EMERGENCY RESPONSE

Roadway Structures crews respond to emergency situations 24 hours a day, 7 days a week, 365 days a year. In 2016, crews responded to 114 emergency situations.

There was no significant seismic events in 2016 that triggered the post-earthquake bridge inspection program.

RESPONSES IN 2016

- 43** Movable Bridges
- 7** Structure Maintenance
- 11** Accident Response
- 8** Other

FUNDING

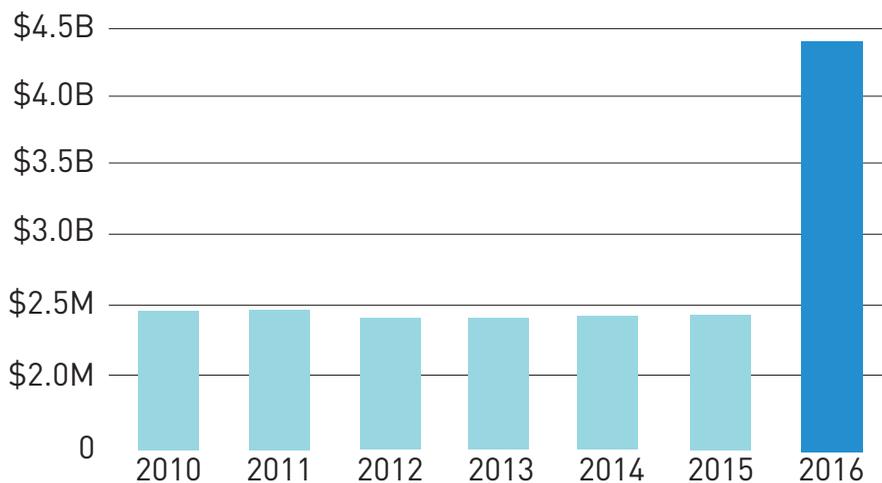

The 2016 Maintenance and Operations budget was \$8 million, of which 43% is for operation of the city's movable bridges. The maintenance budget is less than 0.1% of the bridge inventory replacement value. Other funding sources are \$1.7 million for Annual Capital Programs and work performed for other divisions and agencies.

In addition to replacing older bridges, Seattle continues to add new infrastructure to its inventory. With the passing of the Move Seattle Levy, an additional \$2.5M was added to the maintenance budget. This will greatly reduce the bridge maintenance backlog.

A key component to the successful management of the city's aging bridge inventory will be providing adequate preservation maintenance funding.

Over the past few years, SDOT has added and removed several bridges to its inventory, resulting in a net increase of over 247,000 square feet of bridge deck. This additional inventory puts strain on maintenance funds.

BRIDGE MAINTENANCE BUDGET (WITH INFLATED DOLLARS)

MAINTENANCE PROJECTS

Skilled craft crews perform maintenance projects on many of Roadway Structures-managed assets. These projects represent work that goes beyond routine maintenance and allows Roadway Structures to provide the highest quality work at the best value. Examples of crew work:

Rail Repair to the Alaskan Way Seawall (AWS)

Maintenance of the Elliott Bay Seawall takes constant care. The railing is 85 years old and often requires emergency repairs to protect public safety. Our skilled structural concrete workers fabricated replacement baluster that restored the railing to its original appearance.

Rainier Ave S & S Pilgrim Retaining Wall

SDOT is funded to install new retaining walls at locations that are prone to landslides. The sidewalk and roadway along Rainier Ave S near Rainier Beach are vulnerable to being closed due to many small landslides. Roadway Structure crews are highly skilled in installing soldier pile walls with deep foundations and reinforced concrete facing.

University Bridge North Approach:

A new asphalt deck was installed on the University Bridge - North Approach as part of a SDOT Capital Project. In preparation for the new asphalt deck, maintenance crews repaired the bridge structural concrete driving surface. CPRS inspectors performed acoustical testing of the bridge concrete deck to locate areas of delamination. Following the testing, Maintenance Crews repaired several deck spalls. Bridge expansion joints were also replaced adding many years of life to this busy bicycle, pedestrian and vehicle corridor.

TOP LEFT: Alaskan Way Seawall work
TOP RIGHT: Retaining wall repair work
BOTTOM: Work on University Bridge North Approach

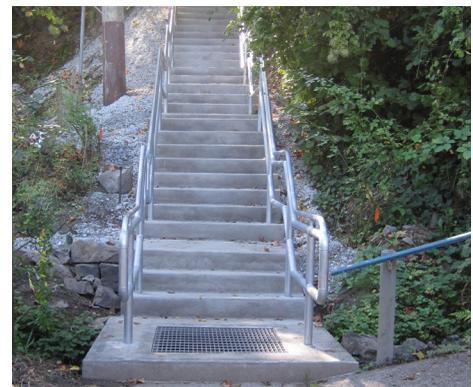

MOVE SEATTLE STAIRWAY REHABILITATION PROJECTS

This program rebuilds and/or rehabilitates stairways to the latest standards, adding proper width, step height, grip rail, landings, and other features required by the Americans with Disabilities Act. From 2007 to 2016, SDOT rehabilitated or rebuilt stairways throughout the city.

2016 Stairway Rehabilitation Project Locations

- Replaced railing on top of the 4th Ave S, south of Seattle Blvd.
- W Armour & 14th
- SW Andover & 20th Ave SW
- W Dravus & 26th
- SW Holly & Beveridge
- S Lilac St, 34th to Letitia
- 26th Ave E & E Prospect St
- W Elmore, 30th to 31st
- S Ferdinand, 53rd to 54th (Rail Only)
- W Bertona & 3rd (Rail Only)

Before and after photos of stairway rehabilitation

ANNUAL PROGRAMS

Retaining Walls

The Retaining Wall program is designed to provide a dedicated funding source for repairs to retaining walls. The following projects were completed in 2016:

- Replaced Wall at 24th Ave E & E Mercer St
- Repair walls at NE 95th St & 25th Ave NE
- Replaced railing on top of the 4th Ave S, south of Seattle Blvd.

Bridge Painting

Roadway Structures has 19 bridges built with steel elements and 14 bridges that have metal components. These bridges require regular painting to protect from corrosion and rust. The typical life of a paint system on a bridge is 18 years. The following bridges were painted in 2016:

- NE 45th St Ped Bridge
- S Main St Bridge
- S Spokane Swing Bridge
- Overpass at Roosevelt and Campus Parkway
- NE Holman Ped Bridge at 13th Ave NE

Bridge Load Rating

Safety of Seattle's bridges is the highest priority within Roadway Structures. Managing the safe weight capacity of bridges is an important element to bridge safety. The Load Rating program provides for 1) the detailed analysis and calculation of the "load capacity" of a bridge; 2) the performance of "live load" tests on a bridge; and 3) the instrumentation and monitoring of deficient bridges. A list of load-restricted bridges can be found in Appendix E. The following bridges were load rated in 2016:

- W Dravus St over 15th Ave W

RIGHT: Ballard Bridge
BOTTOM LEFT: Retaining Wall at NW 95th St
BOTTOM RIGHT: Eastlake Bridge

CAPITAL IMPROVEMENT PROGRAM

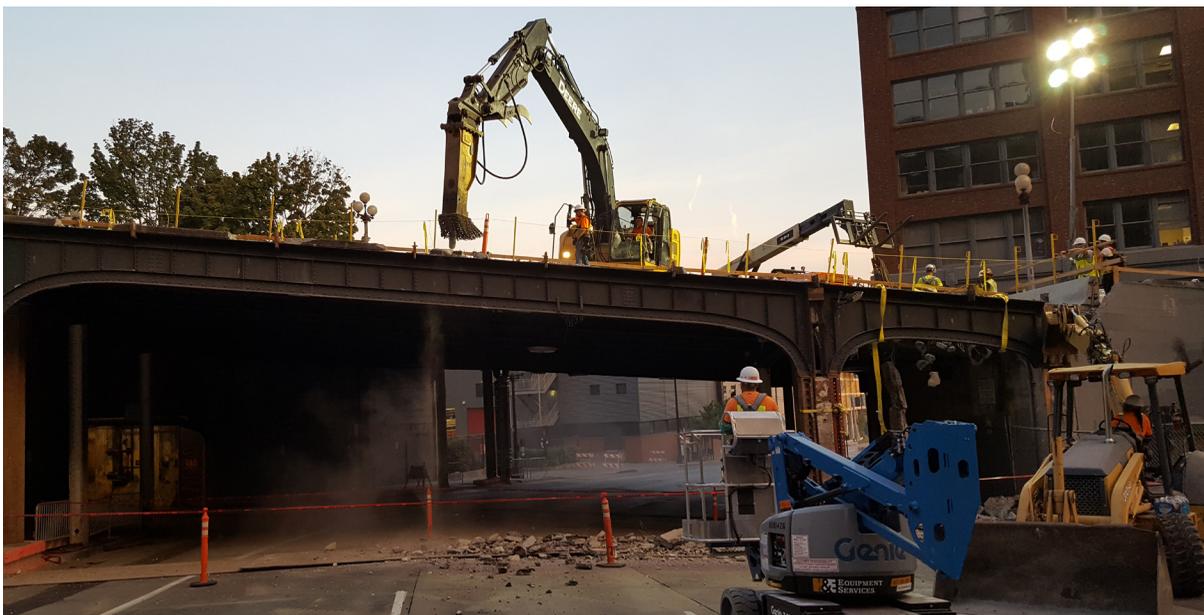

The Roadway Structures Capital Improvements program consists of major maintenance and replacement projects involving bridges, retaining walls, stairways, and areaways.

Projects completed in 2016 include:

- Ballard Bridge Seismic Retrofit
- Rail Paint Project
- Fauntleroy Bearing Pads and Girder Replacement

Projects in design and/or construction in 2017 include:

- Post Ave Bridge
- Yesler Way Over 4th Ave S
- W Howe St Bridge
- Fairview Ave N, Bridge Replacement
- NE 45th St Viaduct Seismic Retrofit
- Sound Transit North Link Bike & Pedestrian Northgate Bridge

TOP LEFT: View of Jose Rizal bridge painting
TOP RIGHT: Fauntleroy Bridge
BOTTOM: Yesler Bridge construction

THE FUTURE OF ROADWAY STRUCTURES IN SEATTLE

2016 marked the first full year of the Move Seattle Levy (MSL) transportation funding package. For bridges, retaining walls, stairways, and other transportation structures, MSL provided funding that closed a gap for the replacement of the Fairview Avenue bridges and began the work of eliminating the back log of maintenance on transportation structures.

Replacing the Fairview Ave N. bridges marks the end of an era when all bridges were constructed using high quality and abundant timber, on which Seattle was founded. Although, timber served Seattle well, it is susceptible to fungal decay and does not have the service life that modern concrete and steel possess.

Providing long lasting structures is a focus of our work. Public safety and the safe travel across Seattle bridges remains Roadway Structures' highest priority.

The average age of Seattle's bridges is 61 years old, with 60 bridges over 60 years old. The replacement value of these 119 bridges is \$3,975,853,770. With a strong life cycle cost approach to new bridge construction and a strong investment in maintenance, SDOT is positioned to keep bridges

functioning and serving the public long past their design life.

SDOT has a highly-trained group of engineering professionals that are dedicated to managing the safety of our City's bridges.

CPRS's structural design group and bridge inspection teams analyze, monitor and inspect bridges continually to insure the safe travel of legal sized vehicles across Seattle bridges.

Dedicated skilled craft workers, bridge operators and engineering staff assure this goal is attained, all working together to increase mobility and improve public options to Move Seattle.

NOTES:

1. This list does not include all bridges within the City limits, for example, bridges carrying I-5 traffic are not included.
2. Maintenance responsibility has not been determined for bridge BRG-044. Historically it has been maintained by the owner, inspections are not reimbursable at this time.
3. The City is negotiating with the UW about maintenance responsibility of BRG-096.
