DEVELOPMENT STANDARD ADVISORY COMMITTEE

Maureen Sheehan

City of Seattle

Major Institutions and School Coordinator

OBJECTIVES

- Committee Members
- Purpose & Intent
- Meeting Process
- Schedule
- Recommendations
- Roles & Responsibilities
- Evaluation Criteria

COMMITTEE MEMBERS

	NAME	CATEGORY
1	Diana McFarlane	Person residing within 600'
2	Vacant	Person owning property or a business within 600'
3	Bruce Rowland Johnson	Representative of the general neighborhood
4	Betsy Amick	Representative of the general neighborhood
5	Vacant	At large to represent citywide education issues
6	Sandy Miller	Representatives of the PTSA
7	Vacant	Representatives of the PTSA
8	Mike Barrett	Representative of the Seattle Public Schools
Alt 1	Vacant	
Alt 2	Vacant	
Ex-Officio	Maureen Sheehan	City DON (Non-voting Chair)
Ex-Officio	Holly Godard	City Seattle Department of Construction & Inspections (Non-voting Member)

PURPOSE & INTENT

- Most schools are located in single family zone neighborhoods, the land use code does not include a "school zone"
- Renovation and additions often times will not meet the underlying zoning' therefore the public schools can request exemptions, known as departures, from the land use code.
- This committee is an opportunity for neighbors and the surrounding community to give the City feedback whether to allow departures.
- The committee can recommend to grant, grant with condition, or deny the requested departures.

MEETING PROCESS

- Robert's Rules of Order DON Staff serves as non-voting Chair
- Presentation from Seattle Public Schools
- Public Comment
- Committee Deliberation reference criteria (SMC 23.79.008)
- Vote on the need for departures and each individual departure

SCHEDULE

```
March 14, 2019 Committee Formed
```

May 2, 2019 - First Meeting

TBD - 2nd Meeting, if needed

TBD - 3rd Meeting, if needed

Recommendation report due to director of SDCI (drafted by DON, with the committees final approval):

If 1 Meeting = June 1, 2019 (30 days after first meeting)

If 2-3 Meetings = July 31, 2019 (90 days after first meeting)

TBD, SDCI Director issues decision

RECOMMENDATIONS

Recommendations must include consideration of the interrelationship among height, setback and landscaping standards when departures from height or setback are proposed.

COMMITTEE ROLES & RESPONSIBILITIES

(23.79.008)

- A. It shall conduct one or more **public meetings** within a ninety (90) day period from formation of the advisory committee.
- B. It shall gather and evaluate public comment.
- C. It shall **recommend the maximum departure** which may be allowed for each development standard from which a departure has been requested. Minority reports shall be permitted. The advisory committee may not recommend that a standard be made more restrictive unless the restriction is necessary as a condition to mitigate the impacts of granting a development standard departure.

EVALUATION CRITERIA – CONSISTENCY

(SMC 23.79.008)

Departures shall be evaluated for consistency with the general objectives and intent of the City's Land Use Code, including the rezone evaluation criteria in Chapter 23.34 of the Seattle Municipal Code, to ensure that the proposed facility is compatible with the character and use of its surroundings.

EVALUATION CRITERIA – RELATIONSHIP

(SMC 23.79.008)

In reaching recommendations, the advisory committee shall consider and balance the interrelationships among the following factors:

Relationship to Surrounding Areas. The advisory committee shall evaluate the acceptable or necessary level of departure according to:

- 1) Appropriateness in relation to the character and scale of the surrounding area;
- 2) Presence of **edges** (significant setbacks, major arterials, topographic breaks, and similar features) which provide a transition in scale;
- 3) Location and design of structures to reduce the appearance of bulk;
- 4) Impacts on traffic, noise, circulation and parking in the area; and
- 5) Impacts on **housing and open space**. More flexibility in the development standards may be allowed if the impacts on the surrounding community are anticipated to be negligible or are reduced by mitigation; whereas, a minimal amount or no departure from development standards may be allowed if the anticipated impacts are significant and cannot be satisfactorily mitigated.

EVALUATION CRITERIA - NEED (SMC 23.79.008)

Need for Departure. The physical requirements of the specific proposal and the project's relationship to educational needs shall be balanced with the level of impacts on the surrounding area. Greater departure may be allowed for special facilities, such as a gymnasium, which are unique and/or an integral and necessary part of the educational process; whereas, a lesser or no departure may be granted for a facility which can be accommodated within the established development standards.

Questions?

REQUESTED DEPARTURE

Parking quantity

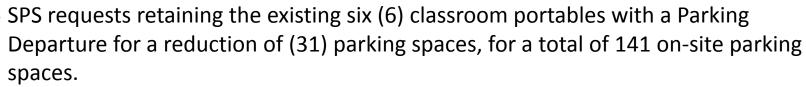

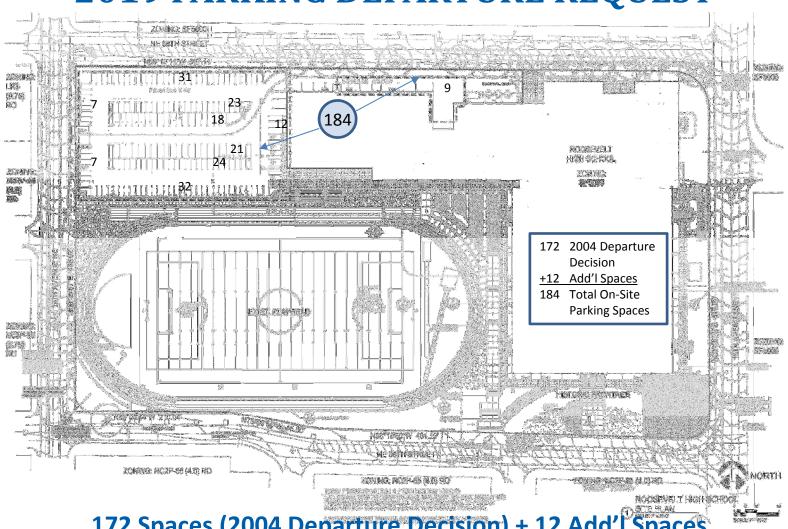

ROOSEVELT HIGH SCHOOL PROJECT OVERVIEW

Seattle Public Schools needs to retain 6 classroom portables in the NW parking lot to meet projected long-range enrollment needs.

Capacity Overview & Need

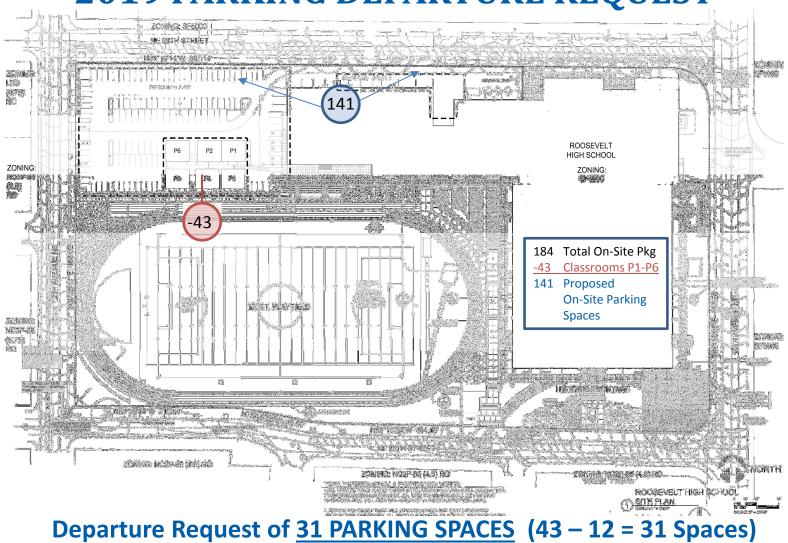

- In 2018, a Parking Departure was granted allowing ten (10) classroom portables to be located in the NW parking lot to accommodate increasing enrollment needs. Six (6) existing classroom portables remained. Four (4) additional classroom portables were not installed.
- One condition of the Parking Departure was to remove the portables at the end of the 2018-2019 school year as Lincoln HS opens in 2019 to alleviate building capacity needs.
- Recent projections show that enrollment at Roosevelt HS will decrease, but not as much as previously projected, despite the additional capacity at Lincoln HS.
- The projected enrollment trend is for Roosevelt HS to decrease for a few years, then to begin increasing again.
- Because of this longer-range projection, SPS does not recommend removal of the existing portables.

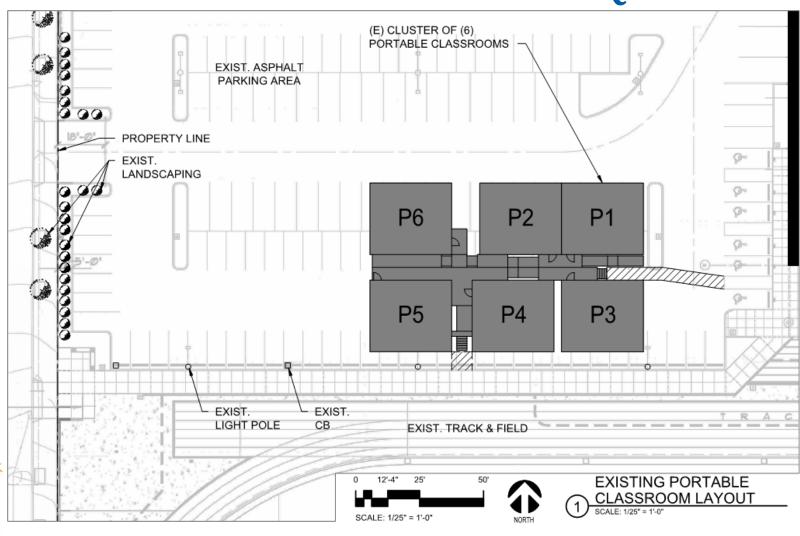

172 Spaces (2004 Departure Decision) + 12 Add'l Spaces
= 184 Total On-Site Parking Spaces

Departure Request of <u>31 PARKING SPACES</u> (43 – 12 = 31 Spaces for a total of 141 on-site Parking Spaces

SEATTLE PUBLIC SCHOOLS

STREET VIEW FROM 12TH AVENUE SE LOOKING SE

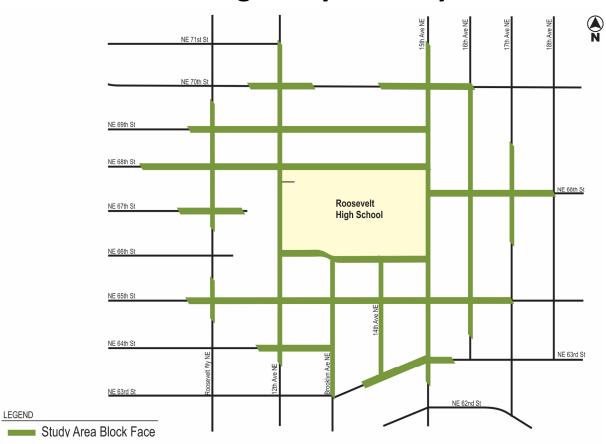

Overview of Parking Analysis

- Inventory on-street parking supply in parking analysis study area
- Perform on-street and on-site parking occupancy counts during four weekday periods in which Roosevelt High School generates parking demand (includes parking effect of portables); mid-afternoon counts conducted on days with and without school in session
- Adjust baseline parking to account for future projects that could affect on-street capacity or parking demand (unrelated to portables)
- Calculate parking demand generated by portables (due to displaced parking from school lot and demand generated by additional enrollment)
- Calculate future parking utilization with and without portables

Parking Analysis Study Area

- Based on City of Seattle guidance for parking analysis
- 800-foot walking distance from site

Factors Contributing to Roosevelt Area Parking Utilization (with or without Portables)

- Short-term generated by construction
 - Parking lane closures adjacent to construction projects reduce parking supply
 - Parking demand generated by construction employees near future assumed to experience levels similar to existing
- Long-term generated by new development
 - Increases in parking demand due to growth in development 20 "pipeline" residential and mixed use development projects identified that may generate on-street parking and have parking influence areas that overlap the study area

Existing On-Street Parking Utilization

	Existing (March 2019)			
Study Period	On-Street Supply (spaces)	Total Occupancy** (vehicles)	Utilization	
Mid-Morning (9:30 to 10:30 A.M.)	659	518	79%	
Mid-Afternoon (1:15 to 2:15 P.M.)	646	485	75%	
Early Evening (4:30 to 5:30 P.M.)	605	352	58%	
Later Evening (7:00 to 8:00 P.M.)	659	406	62%	

^{**}Includes parking impacts of portables, which are already on site.

Comparison to Previous Counts

- Existing on-street supply reduced by up to 17% (depending on time of day)
 compared to last year, due primarily to NE 65th Street re-channelization but also to
 some additional parking lane closures adjacent to development construction.
- However, overall parking occupancy also decreased by 6% to 17% (depending on time of day).
- Existing utilization is slightly higher (up to 4% higher in the morning and up to 6% higher in the evening) compared to last year, but still below the City-defined capacity of 85%.
- The school's peak parking rate decreased to 0.14 parked vehicles per student,** compared to 0.23 parked vehicles per student calculated in 2016.

**Derived from comparing on-street and on-site counts of parked vehicles on days with and without school in session.

Potential On-Street Parking Demand Generated by Portables

	Parked Vehicles		
Study Period	Overspill from Parking Lot Capacity Reduction	Additional Demand from Increased Enrollment**	Total
Mid-Morning (9:30 to 10:30 A.M.)	36	25	61
Mid-Afternoon (1:15 to 2:15 P.M.)	39	25	64
Early Evening (4:30 to 5:30 P.M.)	0	0	0
Later Evening (7:00 to 8:00 P.M.)	0	0	0

^{**}Assumes parking generation would be consistent with current observed rate at Roosevelt High School, and enrollment at maximum occupancy accommodated by the portables.

Estimated Parking Utilization Without and With Portables

		Without Portables		With Portables		
Study Period	On-Street Supply (spaces)	Total Occupancy (vehicles)	% Utilization	Added Demand (vehicles)	Total Occupancy (vehicles)	% Utilization
Mid-Morning (9:30 to 10:30 A.M.)	700	511	73%	61	572	82%
Mid-Afternoon (1:15 to 2:15 р.м.)	687	475	69%	64	539	78%
Early Evening (4:30 to 5:30 P.M.)	646	438	68%	0	438	68%
Later Evening (7:00 to 8:00 р.м.)	700	492	70%	0	492	70%

^{**}Supply assumes 41 spaces currently unavailable due to construction of pipeline development projects are restored, and occupancy includes the on-street parking demand they are projected to generate.

Measures to Reduce On-Street Parking Impacts

Continuation of current measures:

- SPS will not allow non-scholastic and recreational night-time use of the lighted athletic field until the portables are removed (condition of field lighting project).
- Continue the Transportation Communication & Operation Plan developed in 2018 that acknowledges the challenges of driving and parking, and encourages faculty, students, and staff to travel to and from school by walking, biking, carpooling, or taking transit.

Summary

- SPS proposes to retain six portable classrooms, which are planned to remain in place until Roosevelt's student enrollment level aligns with its building capacity.
- The portables and the associated increased enrollment likely contribute a small amount to parking impacts exacerbated by other factors – SPS will continue to implement the mitigation measures put in place in 2018, to help limit potential impact to on-street parking demand.
- Departure Request: Extend prior departure of 31 spaces allowing a reduced interim supply of 141 on-site parking spaces.

INTRODUCTION 1.

This report presents parking analysis for the Seattle Public Schools' (SPS) continued placement of six portable classrooms at Roosevelt High School. The scope of analysis and approach were based on extensive past experience performing transportation impact analyses for SPS projects throughout Seattle. This analysis was prepared to support a request to extend the parking code departure approval granted in 2018 for the placement of portables at the site. This report updates the analysis performed in 2018¹ and documents the existing (2019) conditions in the site vicinity, presents estimates of project-related parking impacts, and recommended mitigation.

Project Description 1.1.

Roosevelt High School is located at 1410 NE 66th Street in the Roosevelt neighborhood of Seattle. The project site and surrounding vicinity are shown on Figure 1.

SPS proposes to retain six portable classrooms that were originally placed in 2016 and 2017. The portable classrooms are planned to remain in place until Roosevelt's student enrollment level aligns with its building capacity. The current proposal reflects a reduction from the departure that was requested and approved in 2018, which sought placement of four portables in addition to the six currently in place; however, the four additional portables were not installed.

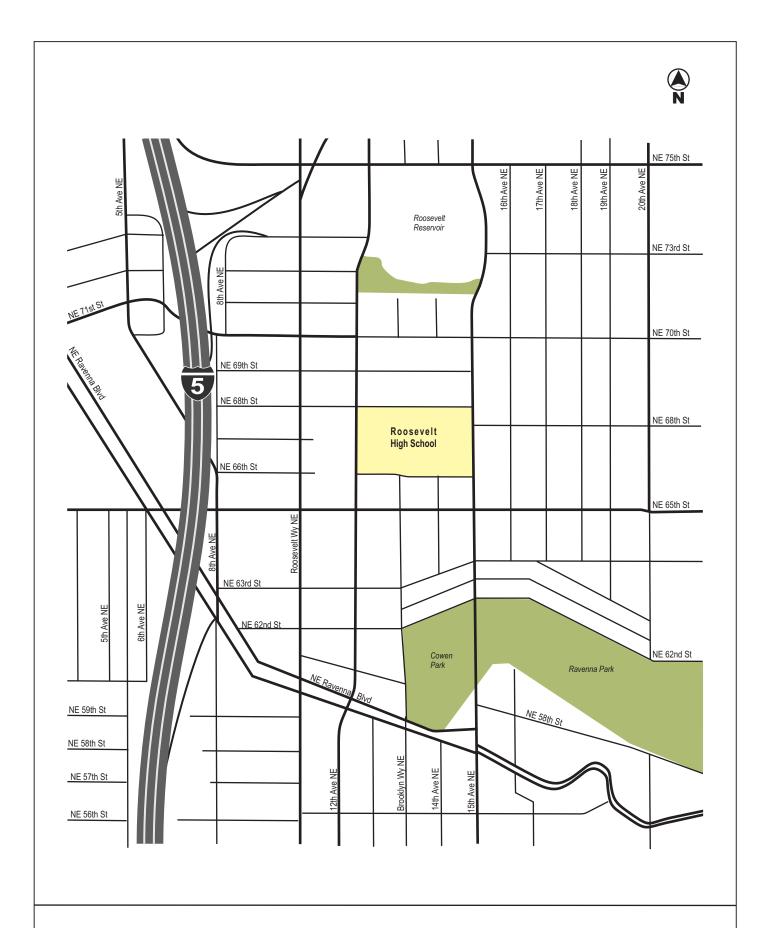

The school building occupies the northeastern portion of the site; the main surface parking lot is located on the northwestern portion of the site and is accessed from a driveway on 12th Avenue NE. The school's existing outdoor athletic facilities (which include a lighted football/soccer field with synthetic turf, a track that surrounds the field, and a small section of bleacher seating) are located on the southwestern portion of the site. Six portable classrooms are currently located in the surface parking lot and have reduced the school's on-site parking supply from 184 to 141 spaces. The six portable classrooms accommodate an additional enrollment capacity of about 180 students and six faculty members (with 30 students and one faculty member per classroom).²

The site plan with the locations of the portable classrooms is shown on Figure 2.

Email communication, T. Wang, Seattle Public Schools, May 2018.

2. BACKGROUND CONDITIONS

This section presents the existing transportation conditions in the vicinity of Roosevelt High School, including the existing roadway network, transit facilities, non-motorized facilities, and parking.

2.1. Roadway Network

The Roosevelt High School site is bounded on the east by 15th Avenue NE, on the south by NE 66th Street, on the north by NE 68th Street, and on the west by 12th Avenue NE. Key roadways that serve the campus are described below. Roadway classifications were obtained from the City's *Street Classification Map*. Speed limits are 25 miles per hour (mph) on arterials (unless otherwise marked) and 20 mph on local access streets.

NE 65th Street is an east-west Minor Arterial that connects between Sand Point Way NE to the east and E Green Lake Way N to the west. In the Roosevelt and Ravenna neighborhoods, it was recently reconfigured and now has one travel lane in each direction, with a center left-turn lane and bike lanes, sidewalks, curbs, and gutters on both sides. In the vicinity of the school there is no on-street parking.

15th **Avenue NE** is a north-south Minor Arterial that connects between NE Pacific Street to the south and Ballinger Way NE to the north. In the vicinity of the school, it has one travel lane in each direction with peak period parking prohibitions that provide an additional travel lane in the peak direction. Parking along the west curb (southbound) is prohibited from 7:00 to 9:00 A.M.; parking on the east curb (northbound) is prohibited from 4:00 to 6:00 P.M. Adjacent to Roosevelt High School, the southbound curb lane is limited to school bus load/unload only between 7:00 and 9:00 A.M. and 1:00 and 4:00 P.M. Near 15th Avenue NE, parking is prohibited at all times to provide additional lanes at that intersection. It has curb, gutter, and sidewalk on both sides.

12th Avenue NE is a one-way northbound Principal Arterial that connects between the University District to the south and Lake City Way NE to the north. In the vicinity of the school it has two travel lanes, a bike lane, and parallel parking on both sides of the street. It has curb, gutter, and sidewalk on both sides. However, the on-street parking and sidewalk on the west side, between NE 65th Street and NE 68th Street are currently unavailable due to construction of Sound Transit's Roosevelt Station for Link light rail.

Roosevelt Way NE is a one-way southbound Principal Arterial that connects between Lake City Way NE to the north and the University District to the south. North of NE 75th Street/Lake City Way NE it is a two-way Principal Arterial that connects between the Roosevelt and Northgate neighborhoods. In the vicinity of the school it has two southbound travel lanes and a bike lane, with parallel parking on both sides of the street. It has curb, gutter, and sidewalk on both sides of the street.

NE 66th Street is an east-west local access street that connects between 8th Avenue NE and 15th Avenue NE. Between 12th Avenue NE and 15th Avenue NE, it has one lane designated for one-way eastbound travel. This section has curb, gutter, and sidewalk on both sides. Along the segment between 12th Avenue NE and Brooklyn Avenue NE, there is on-street parallel parking permitted on the south side. Between Brooklyn Avenue NE and 15th Avenue NE, back-in-angle parking is permitted on the north side of the street. The segment between Roosevelt Way NE and 12th Avenue NE is currently closed due to construction of Roosevelt Station; it will re-open after construction is complete in 2021.

Seattle Department of Transportation (SDOT), Street Classification Maps, accessed March 2019.

Transportation Technical Report Roosevelt High School Portables Project

Brooklyn Avenue NE is a two-way north-south local access street that connects between NE 62nd Street and NE 66th Street. It has curb, gutter, and sidewalk on both sides. In the vicinity of the school, there is on-street parking permitted on both sides of the street. Due to its width, the travel way is effectively restricted to one lane for both directions of travel when on-street parking occurs on both sides.

NE 68th Street is an east-west local access street that connects between 8th Avenue NE and 15th Avenue NE. Adjacent to the school site between 12th Avenue NE and 15th Avenue NE, it has one lane designated for one-way westbound travel. This section has curb, gutter, and sidewalk on both sides. Back-in, angle parking is available on the south side of the street.

14th Avenue NE is a two-way north-south local access street that connects between NE 63rd Street and NE 66th Street. It has curb, gutter, and sidewalk on both sides. In the vicinity of the school there is onstreet parking permitted on both sides of the street. Due to its width, the travel way is effectively restricted to one lane for both directions of travel when on-street parking occurs on both sides.

2.2. **Planned Improvements**

The Roosevelt Station, which will serve the Northgate Extension of Sound Transit's Link light rail service, is currently under construction and is planned to be open in 2021. Existing conditions documented in this report reflect temporary street closures and parking restrictions around the station construction area. After Roosevelt Station is open, it is expected that these restrictions will be lifted. However, the Seattle Department of Transportation (SDOT) may implement restrictions (e.g. parking duration time limits) along the streets around the station area to discourage "hide-and-ride" activities by transit riders who may attempt to park in the area long-term and access light rail for their commute. As part of the Roosevelt Station project, planned to be complete in 2021, walkway and crosswalk improvements are planned along 12th Avenue NE.⁴ A crosswalk and curb bulbs (to narrow the crossing distance) are planned on west leg of NE 66th Street at 12th Avenue NE. A new crosswalk on 12th Avenue is planned on the south side of NE 67th Street. This intersection is also planned to have curb bulbs to narrow the crossing distance across 12th Avenue NE.

The City of Seattle's 2019-2024 Proposed Capital Improvement Program (CIP)⁵ was reviewed to identify any proposed projects that could affect parking in the next few years. The CIP includes the Roosevelt Multimodal Corridor project, which is planned to develop and implement a range of transit and street improvements in the corridor connecting the University District, Eastlake and South Lake Union neighborhoods between Downtown and the Roosevelt Station area. The corridor is identified as a priority in the Transit Master Plan 6 and the project will identify, prioritize, design, and construct the highest priority "speed and reliability" improvements to existing bus service. The project will also consider an improved right-of-way profile to best accommodate the corridor's multimodal demands, along with the recommendations reflected in each of the City's adopted modal transportation plans and the respective neighborhood plans. The CIP identifies funding for the Roosevelt Multimodal Corridor project each year through 2023. Although specific additional improvements have not been identified, it is possible that ongoing multimodal improvements could affect parking along the corridor.

The Adopted Seattle Bicycle Master Plan (BMP), 7 recommends new protected bicycle lanes on Roosevelt Way NE, 12th Avenue NE, and NE 65th Street through the study area. The BMP also recommends

SDOT, April 2014.

Sound Transit. North Link Final Supplemental Environmental Impact Statements. Transportation Technical Report. April 2006.

City of Seattle, 2016.

Transportation Technical Report Roosevelt High School Portables Project

an in-street local connector (a bicycle facility with minor separation) on 15th Avenue NE and local connector neighborhood greenways along NE 66th Street between Weedin Place NE and 15th Avenue NE as well as on Brooklyn Avenue NE from NE 66th Street south to NE Ravenna Boulevard.

The protected bicycle lane on Roosevelt Way NE between NE 65th Street and the University Bridge was completed in 2016, and protected bicycle lanes on NE 65th Street were installed as part of the City's *Vision Zero* program in 2018. The 2017-2021 BMP Implementation Plan ⁸ projects include installation of protected bicycle lanes along 11th/12th Avenues NE between the University Bridge and NE 75th Street, along 15th Avenue NE between NE 62nd Street and Lake City Way NE, along NE 70th Street between 8th Avenue NE and Roosevelt Way, and extension of the protected bike lanes on NE Roosevelt Way from NE 65th Street to NE 75th Street. Although these bicycle lane projects have been identified as high priority by the City, no design or schedule information is currently available. However, it is possible that some or all of these projects could be implemented prior to or during the next few school years and could potentially result in on-street parking reductions or modifications where they are constructed.

2.3. Parking Supply & Occupancy

Both off-street and on-street parking at and around Roosevelt High School were surveyed to determine the existing parking supply and parking demand. This information was then used to estimate how parking utilization could be affected by parking demand generated by the portables (which is presented later in Section 3). The following sections describe the parking supply as well as the current parking demand and utilization rates.

2.3.1. On-Street Parking

A detailed on-street parking study was performed and supply was documented according to the methodology outlined in the City of Seattle's Tip #117. The City recommends use of this methodology to document the number and type of on-street parking spaces that may exist within a defined study area. This analysis was completed to document the existing supply and how it is currently utilized.

The study area for the on-street parking utilization analysis included all roadways within an 800-foot walking distance from the school site, which is the study area typically required by the City of Seattle for analyses of this type. The 800-foot walking distance results in a study area that extends just west of Roosevelt Way NE, north to NE 71st Street, south to NE 63rd Street, and east to 18th Avenue NE. The study area consists of both commercial and residential land uses. Commercial development is concentrated along sections of NE 65th Street and Roosevelt Way NE through the study area. It should be noted that only some of the residences within the study area have off-street parking capacity in driveways or garages. Many of the residents actively use on-street parking.

As previously discussed, ongoing construction activities around Roosevelt Station site have removed some on-street parking and disconnected both NE 66th Street and NE 67th Street between Roosevelt Way N and 12th Avenue NE. These streets will be reconnected when the construction ends, but any restored/new on-street parking spaces are likely to be restricted to short-term parking only. Details about parking supply and demand are provided in the following sections.

The City recommends using information in Tip #117 to assist with parking utilization studies. Although created for another purpose, Tip #117 contains guidance for measuring on-street supply; other details and analysis requirements, such as parking demand count periods, are typically based on the type of project being proposed and evaluated.

⁸ SDOT, April 2017.

Transportation Technical Report Roosevelt High School Portables Project

On-Street Parking Supply

In the study area, most of the local access residential streets are at least 25 feet wide and parking is generally permitted on both sides of the street (except where angle parking occurs on one side). The study area was separated into individual block faces. A block face consists of one side of a street between two cross-streets. For example, the east side of 12th Avenue NE between NE 66th Street and NE 68th Street is one block face (identified as block face 'CC'). The study area and block face designations are shown on Figure 3.

Each block face was measured and analyzed to determine the number of on-street parking spaces. First, common street features—such as driveways, fire hydrants, and special parking zones—were noted and certain distances adjacent to the street features were noted. No on-street parking capacity was assumed within 30 feet of a signalized or marked intersection, within 20 feet of an uncontrolled intersection, within 15 feet on either side of a fire hydrant, within 20 feet on either side of a crosswalk, or within 5 feet on either side of a driveway or alley. The remaining unobstructed lengths of street between street features were converted to legal on-street parking spaces using values in the City's Tip #117. It should be noted that the curb-face values in Tip #117 reflect space lengths that range from about 18.5 feet to 26.5 feet per space. Based on extensive experience of Heffron Transportation preparing on-street parking utilization studies, a trend has been observed that the increased popularity of smaller cars (such as Smart cars) and the tendency for drivers to park closer together in areas with higher utilization can result in more available supply than would be suggested by the Tip #117 guidance.

The total number of on-street parking spaces within the study area varies throughout the day. Restrictions limit maximum parking durations ranging between one and four hours (some with paid parking stations and some without), and peak direction restrictions during the morning or evening commute periods. The parking supply was inventoried for four representative weekday periods when Roosevelt High School typically generates parking demand: mid-morning (around 10:00 A.M.), mid-afternoon (around 1:45 P.M.), and two evening periods. Peak period restriction prohibits parking between 4:00 and 6:00 P.M. on 15th Avenue NE and 12th Avenue NE, resulting in different evening parking supply during and after this period. Evening parking counts were conducted during the early evening (around 5:00 P.M.) when the restriction was in place, and later evening (around 7:30 P.M.) after it had expired.

The parking supply survey determined that there are currently 659 on-street parking spaces within the defined study area; all of these spaces can be used during the mid-morning and later evening periods, 646 spaces can be used during the mid-afternoon period, and 605 spaces can be used during the early evening period. These totals do not include 49 on-street spaces that are currently unavailable due to adjacent construction projects; 41 of the spaces are adjacent to mixed use projects currently under construction directly south of the school, and eight of the spaces are adjacent to the Roosevelt Station construction (four on each side of Roosevelt Way NE). The parking supply totals by block face are provided in Appendix A.

04.16.19

Transportation Technical Report Roosevelt High School Portables Project

Existing On-Street Parking Occupancy

Existing parking occupancy counts within the study area were performed between February 20 and March 7, 2019. Weekday occupancy counts were performed during four periods when school was in session. Mid-morning (between 10:00 and 10:45 A.M.) and mid-afternoon (1:45 to 2:30 P.M.) counts were conducted to reflect typical school day conditions. Early evening (5:00 to 5:45 P.M.) and later evening (7:30 to 8:15 P.M.) counts were conducted to reflect conditions when after-school scholastic and athletic activities take place. The highest level of after-school activities occurred on Tuesday, February 26, including athletic practices during the early evening period and a meeting for parents/guardians during the later evening period. Athletic practices and other activities were observed at the field on both days during the early evening period. Mid-afternoon counts were also conducted during the week of Roosevelt High School's mid-winter break, in order to compare conditions with and without school in session.

The results of the parking occupancy surveys are summarized in Table 1. Detailed summaries of the onstreet parking occupancy for each block face for all counts are provided in Appendix A. On-street parking utilization was calculated as the number of vehicles parked on street divided by the number of legal on-street parking spaces within the study area or on a specific block face. The study area utilization totals are also summarized in Table 1. As shown, utilization of on-street parking (with school in session) in the study area ranged from 71% to 79% during the daytime periods and 57% to 62% during the evening periods. Field observation found that the larger difference between the two observation days for the mid-afternoon counts appeared to be primarily due to a varying number of construction-generated vehicles present within the study area.

The mid-afternoon counts performed during the mid-winter break were used to estimate the general level of parking demand generated by the school during the day, and also to help identify the areas where parking demand generated by construction employees working in the area is highest. Based upon the differences between counts on afternoons with and without school in session, about 140 vehicles parked on street during the day are estimated to be generated by the school.

The field survey also found five block faces within the study area that appeared to be predominantly used by construction-related vehicles (in addition to eight block faces adjacent to construction projects where parking is currently prohibited). These include both sides of 12th Avenue NE between NE 68th Street and NE 69th Street (block faces BE and BF), the south side of NE 67th Street east of Roosevelt Way NE (block face BY), the NE 66th Street angle parking adjacent to the school between Brooklyn Avenue NE and 14th Avenue NE (block face CJ), and the west half of the angle parking on the south side of NE 68th Street (block face BM). The construction-related demand directly south of the school is likely generated by mixed-use developments that are currently under construction. Construction-employee parking could move on site once the projects' parking garages are complete. However, it is expected that as new development continues to occur around the Roosevelt Station area, construction employee parking could occur at other locations; therefore, it is assumed that construction-related parking demand in the near future is likely to be similar to existing conditions.

2.3.2. On-Site Parking

Roosevelt's parking lot is located in the northwest corner of campus. Currently, the lot provides 141 total spaces including 27 spaces with restrictions (disabled permits, specific school staff, etc.). This total excludes 43 spaces that are currently occupied by the six portable classrooms. Existing parking occupancy counts within the lot were performed during the same study periods described for the on-street parking. Table 2 presents the results of the on-site parking occupancy counts. As shown, with school in session, there were between 113 and 126 vehicles parking in the lot during the day, and between 19 and 40 parked during the evening. On average, 17 to 24 on-site parking spaces were unused during the day and 105 to 120 spaces were unused during the evening. During the week when school was not in session, 10 to 11 vehicles were parked on site during mid-afternoon.

a. These totals do not include 49 on-street spaces that are currently unavailable due to adjacent construction projects; 41 of the spaces are adjacent to mixed use projects currently under construction directly south of the school, and 8 of the spaces are adjacent to the Roosevelt Station construction. Parking supply totals include one space in a 3-minute loading zone.

2.4. Transit Facilities & Service

King County Metro Transit (Metro) currently provides bus service to the site with stops located on Roosevelt Way NE, 12th Avenue NE, 15th Avenue NE, and NE 65th Street within one-quarter mile of the school. These stops are served by Metro Routes 45, 62, 64, 67, 71, 73, 76, and 373.¹⁰

Two park &-ride lots are located about one-half mile to the west of the site. Green Lake Park & Ride, located at NE 65th Street and 8th Avenue NE, has 411 parking spaces and 22 bicycle lockers. ¹¹ Calvary Christian Assembly Church, located at NE 68th Street and Roosevelt Way NE, also has some spaces available for paid public parking during weekdays.

Sound Transit's Northgate Link project is a 4.3-mile extension of the light rail system, with new stations planned for the University District, Roosevelt, and Northgate areas. Sound Transit is currently

King County Metro, Park & Ride and Transit Center Information, https://kingcounty.gov/depts/transportation/metro/travel-options/parking.aspx, Access April 2019.

King County Metro, Route and Schedule Information, https://kingcounty.gov/depts/transportation/metro/schedules-maps.aspx, Accessed April 2019.

Transportation Technical Report Roosevelt High School Portables Project

constructing the Roosevelt Station along the west side of 12th Avenue NE between NE 65th and NE 67th Streets, directly west of Roosevelt High School. The underground station is planned to have two entrances: one at the intersection of NE 65th Street and 12th Avenue NE, and one at the intersection of NE 67th Street and 12th Avenue NE. Elevators, escalators and stairs will lead from the entrances to the platform, approximately 80 to 90 feet below ground level. The above-ground station buildings include ventilation shafts, bike storage, and emergency stairs. Northgate Link is planned to begin operation in $2021.^{12}$

SPS provides yellow bus, door-to-door, Metro, and cab service. Eligibility for District-provided transportation depends on several factors including grade level and proximity to assigned schools. High school students who reside within the boundaries of the Seattle School District and who live more than 2.0 miles from their assigned school are eligible for an ORCA card. Exceptions are allowed for students who require specialized transportation services or who require medical transportation as approved by District Health Services. 13

2.5. Non-Motorized Facilities

Sidewalks exist along all streets in the site vicinity. Crosswalks and pedestrian crossing signals are present at all signalized intersections, and several unsignalized crosswalks are present on 15th Avenue NE, 12th Avenue NE, and Roosevelt Way NE. Due to ongoing construction of the Roosevelt Station, there are no pedestrian facilities currently available on the west side of 12th Avenue NE at the NE 66th Street intersection.

3. PARKING IMPACTS

This section describes the estimated parking impacts resulting from continued on-site parking displacement by portable classrooms at Roosevelt High School. The six portable classrooms were placed in 2016 and 2017; SPS is planning for them to remain until Roosevelt's student enrollment aligns with its building capacity.

3.1. Typical School Days

The portable classrooms on the Roosevelt High School site affects parking on a typical school day in two different ways:

- 1. On-site parking demand (generally staff and employees) is displaced due to the reduced number of spaces available and may spill over to on-street parking during periods when on-site parking demand exceeds the available capacity; and
- 2. The additional student enrollment accommodated by the portables may generate additional parking demand in the vicinity.

The potential impacts from each of these elements are discussed in the following sections.

Seattle Public Schools, Transportation Service Standards 2018-2019, Effective September 1, 2018.

Sound Transit, Roosevelt Station project information, https://www.soundtransit.org/system-expansion/roosevelt-station,

3.1.1. Potential Overspill from On-Site Parking Supply Reduction

As discussed previously, the six portable classrooms currently occupy 43 spaces in the school's parking lot. This reduction in supply and its effect on nearby on-street parking is reflected in the existing parking surveys summarized previously in Table 1. There are 141 total parking spaces currently in the lot. Without the portables in place, the total would be 184.

The on-site parking survey results summarized previously in Table 2 show the highest on-site demand occurring in the afternoon, when an average of 124 parked vehicles were counted. The mid-morning demand was slightly lower at 117 parked vehicles. There were unused parking spaces available during both periods—24 in the morning and 17 in the afternoon. Since there are unused on-site parking spaces with the portables in place, it is unlikely that all of the parking spaces currently displaced would be fully utilized if they were available; however, it is expected that some vehicles currently parked on-street would shift to the parking lot if the portables were not in place. Assuming a similar on-site utilization as existing, it is estimated that about 36 to 39 school-generated vehicles that currently are parked on street would park on site during the school day without the portables in place. The summary in Table 2 shows over 100 unused parking spaces on typical evenings without special events; therefore, no on-street overspill is attributed to the portables on a typical evening. Evenings with larger events are addressed separately in Section 3.4.

3.1.2. Parking Demand from Increased Student Enrollment

The additional student enrollment capacity that can be accommodated at Roosevelt High School with the installation of the portable classrooms may also generate additional parking demand. Comparison of demand counts conducted with and without school in session indicates a peak of 266 parked vehicles generated by the school (approximately 140 on street and 126 on site). At the time of the counts, student enrollment at Roosevelt High School was 1,913 students; this equates to a peak parking rate of 0.14 vehicles per student (this accounts for all parked vehicles, including those generated by students, faculty, staff and visitors). This reflects a reduction in the parking rate derived from a study conducted at the school in 2016 to support analysis conducted for the Lincoln High School Modernization Project, ¹⁴ which found a school-day parking demand rate of about 0.23 vehicles per student at that time.

To estimate parking demand rates for a typical (non-event evening), time-of-day distribution data published in the Institute of Transportation Engineers' (ITE) Parking Generation Manual 15 for High Schools (ITE Land Use Code 530) was applied to the school-day rate that was derived for Roosevelt High School. The ITE data indicate that the early evening parking rate (around 5:00 P.M.) is about 49% of the peak rate, or 0.07 vehicles per student. In the later evening (around 7:00 P.M.), the ITE data indicate that the parking rate is about 8% of the peak rate, or 0.01 vehicles per student.

These rates were applied to the added student enrollment capacity that can be accommodated by the portable classrooms. Table 3 summarizes the estimated parking demand generated by the students that can be accommodated by the portable classrooms at the site. The table shows that parking demand generated by the six portables currently located on the site (and thus reflected in the existing parking counts) is estimated to be 25 vehicles during the day, 13 vehicles during early evening, and 2 vehicles during later evening. Since the on-site parking counts (summarized in Table 2) indicate ample available space in the school parking lot during typical evenings, it is expected that the evening parking demand generated by the added student enrollment capacity primarily occurs on site.

ITE, 5th Edition, January 2019.

Heffron Transportation, August 22, 2016.

Table 3. Parking Demand from Additional Student Enrollment Capacity

Study Period	Parking Demand Rate (vehicles/student)	Parking Demand (vehicles) ^a
Mid-Morning (9:30 to 10:30 A.M.)	0.14	25
Mid-Afternoon (1:15 to 2:15 P.M.)	0.14	25
Early Evening (4:30 to 5:30 P.M.)	0.07	13
Later Evening (7:00 to 8:00 P.M.)	0.01	2

3.1.3. Potential Parking Demand Generated by Pipeline Development

The project's estimated spillover parking demand was analyzed cumulatively with projected spillover parking from other proposed development projects with overlapping parking influence areas (800-foot walking distance from each of the development sites). Twenty pipeline development projects were identified, summarized in Appendix B. They are estimated to generate parking demand within the Roosevelt High School parking study area of 54 vehicles during the day, and 86 vehicles in the evening. It is possible that not all of these projects will be completed and fully occupied during the period in which the portables are in place. In that case, the estimate of their cumulative impacts with the Roosevelt High School Portables project would be conservatively high.

3.1.4. Cumulative Parking Impacts

Table 4 summarizes the projected cumulative on-street parking utilization, with and without the portable classrooms at Roosevelt High School. For the purposes of evaluating the potential on-street parking impacts associated with new development, the City considers utilization rates of 85% or higher to be effectively full. During the daytime, the portables (including the additional student enrollment capacity that they accommodate) are estimated to contribute about 9% to on-street parking utilization, resulting in cumulative parking demand in the study area that is near capacity but does not exceed it. These current forecasts indicate utilization should remain below levels reflected in the parking analysis prepared for the code departure process undertaken in 2018 for the portables. In the evening, additional parking demand generated by the portables is not expected to typically contribute to on-street parking demand. However, if all evening vehicles generated by the additional student enrollment capacity were to park on street instead of on site, the estimated 13 vehicles during early evening and 2 vehicles during later evening would contribute 2% or less to on-street parking utilization during their respective time periods, and cumulative parking demand would remain below the 85% utilization level.

a. Estimated by applying the parking demand rate to the 180-student enrollment capacity that can be accommodated by the six portable classrooms.

Table 4. Cumulative On-Street Parking Utilization – Without & With Portables

		Without I	Portables		With Portable:	S
Study Period	On-Street Supply 1	Total Demand ²	% Utilization	Added Demand ³	Total Demand	% Utilization
Mid-Morning (9:30 to 10:30 A.M.)	700	511	73%	61	572	82%
Mid-Afternoon (1:15 to 2:15 P.M.)	687	475	69%	64	539	78%
Early Evening (4:30 to 5:30 P.M.)	646	438	68%	0	438	68%
Later Evening (7:00 to 8:00 P.M.)	700	492	70%	0	492	70%

- Assumes 41 spaces that are currently unavailable due to construction of pipeline development projects are restored.
- 2. Baseline on-street parking demand was adjusted to include parking generated by pipeline development projects, as summarized in Appendix B, and excludes estimated parking demand generated by the six portables that are currently located in the school lot. Construction-generated on-street parking demand was assumed to continue at current levels.
- 3. Parking demand from the portables includes additional demand estimated to result from associated student enrollment increases, and overspill to the street resulting from reduced parking lot capacity.

It should be noted that the estimates presented in this report are likely conservatively high and intended to evaluate a 'worst case' cumulative parking scenario with the portable classrooms in place. As discussed previously, the analysis assumes completion and occupancy of numerous pipeline development projects with the portables also in place. It is possible that not all pipeline development projects will be completed and/or fully occupied while the portables are in use. Also, the parking demand estimated to be generated by the portables is based upon the additional student capacity that they can accommodate; if actual enrollment is less than the capacity, parking demand increases may be lower than the estimates provided in this analysis. It is also noted that the portables accommodate additional student enrollment demand that will occur with or without them. Nevertheless, the cumulative parking utilization estimates indicate that increased parking demand from new development, as well as the portables project, is expected to approach available on-street capacity in the area during the day.

3.2. Event Parking

It is acknowledged that on occasional evenings when there are multiple events or very large events (such as concerts, theater events, or curriculum night) occurring at Roosevelt High School, utilization of the on-site lot and surrounding roadways can be much higher than a typical non-event evening. SPS will not allow non-scholastic or recreational use (scheduled through Seattle Parks and Recreation) of the lighted athletic field until the portables are removed. After the portables are removed, SPS would not permit scheduling the lighted athletic field for non-scholastic uses on evenings with a large school event or combination of events that are expected to draw more than 730 attendees. 16

Condition defined as part of the SEPA and Master Use Permit process, SDCI Project No. 3029271-LU.

4. SUMMARY AND MANAGEMENT MEASURES

SPS proposes to retain six portable classrooms that were originally placed in 2016 and 2017. The portable classrooms are planned to remain in place until Roosevelt's student enrollment level aligns with its building capacity.

For the purposes of evaluating the potential on-street parking impacts associated with new development, the City typically considers parking utilization over 85% to be effectively full. During the daytime, the portables (including the additional student enrollment capacity that they accommodate) are estimated to contribute about 9% to daytime on-street parking utilization, resulting in cumulative parking demand in the study area of 82%. No on-street overspill is attributed to the portables on a typical evening. However, if all evening vehicles generated by the additional student enrollment capacity were to park on street instead of on site, it would contribute up to 2% to on-street parking utilization on typical (non-event) evenings, and cumulative parking demand would remain below the 85% utilization level.

Compared to 2018 conditions, existing on-street supply reduced by up to 17% (depending on the time of day), due primarily to the NE 65th Street re-channelization project but also due to some additional parking lane closures adjacent to construction projects. However, overall parking occupancy also decreased by 6% to 17%, depending on the time of day. Overall, utilization is slightly higher compared to 2018—up to 4% during the day and up to 6% during the evening—but still below the City-defined capacity of 85%, Based upon the parking counts conducted in March 2019, school's peak parking rate has decreased to 0.14 parked vehicles per student, compared to 0.23 parked vehicles per student calculated in 2016.

The analysis presented in this report is intended to provide a conservative "worst case" scenario, the cumulative parking utilization estimates indicate that the City's recent on-street parking reductions (associated with the NE 65th Street bike lane improvements) combined with increased demand from new development, as well as that attributable to the portables, is expected to cause daytime utilization to approach available on-street parking capacity in the area. Continuation of the following measure identified to support the 2018 departure process is recommended.

• Transportation Communication & Operation Plan – Implement a school-wide information program that acknowledges the challenges of driving and parking, and encourages faculty, students, and staff to travel to and from school by walking, biking, carpooling, or taking transit. The *Transportation Communication & Operation Plan* prepared as a condition of the prior departure approval in 2018, including a graphic that illustrates parking restrictions in the Roosevelt area, is provided in Appendix C. This plan (or similar) and accompanying graphic should be updated at least annually, distributed to students, faculty and staff, and made available on the school's web site. The count results in this report suggest that demand rates are down and may be a result of the effort associated with the 2018 departures approval and this plan.

In addition, as a condition of the Roosevelt High School field lighting project, SPS will not allow non-scholastic and recreational use of the lighted athletic field until the portables are removed.

du = dwelling units, sedu = small efficiency dwelling units, sf = square feet

For data obtained from reports published prior to 2018, residential parking demand was reduced by 25% to reflect updates to the King County Right Size Parking Model released in 2018 using new data collected in 2017, which lowered residential parking rates within the study area compared to the previous version of the model.

a. Influence area measured 800 feet from project site.

APPENDIX C

TRANSPORTATION COMMUNICATION & OPERATION PLAN

ROOSEVELT HIGH SCHOOL TRANSPORTATION COMMUNICATION AND OPERATION PLAN

Parking in the Roosevelt neighborhood is becoming increasingly constrained, as new development and transportation projects are adding parking demand and reducing on-street parking supply. The intent of this plan is to raise awareness of Roosevelt High School's challenges related to driving personal vehicles, encourage other means of traveling to and from school, and mitigate traffic and parking congestion by directing vehicular traffic in an orderly and organized manner.

PLEASE KEEP YOURSELF AND OTHERS SAFE!

Follow these rules when you travel to and from school:

DO ride the bus, walk, or bike to and from school whenever possible. Most students who live 2 miles or farther from school qualify for an Orca public transit pass. Please use private vehicles only as a last resort.

DO cross streets only at crosswalks and corners.

DO choose your bike routes along designated bicycle facilities and local residential streets to the greatest extent possible.

DO lock your bike when it is parked at school. Bike parking is provided at the west entrance to the commons and the southeast school entrance.

If you use a bike from a bike share program, **DO** park it in an area authorized by the City and the bike share program. **DO NOT** block sidewalks, curb ramps, fire hydrants, bus stops, bike lanes, or vehicle lanes.

If driving to school is absolutely necessary, then:

DO carpool with other families or students whenever possible.

DO adhere to speed limits: 25 mph on arterial streets and 20 mph on local residential streets.

DO park only in legal public parking spaces.

DO maintain parking clearances required by City and State law:

- 5 feet from driveways
- 15 feet from fire hydrants
- 20 feet from crosswalks and intersections

DO NOT park in time-restricted parking spaces (see FIGURE 1) for a period longer than the posted time limit. All-day parking is prohibited in these spaces; it is illegal to move your vehicle from one time-restricted space to another in the same block.

DO consider dropping off or picking up students a block or more away from the school site during periods with higher traffic congestion near the school.

DO stay with your car at all times if you are waiting curbside for passengers outside of legal parking spaces.

DO NOT block travel lanes or driveways when waiting to pick up passengers. If there is no space available, **DO** circle around the block and pull into a space when it becomes available.

DO NOT use our neighbors' driveways to park or turn around.

DO NOT park or stop in the school bus loading zones during the posted restricted times (see FIGURE 1).

DO NOT drive the wrong way on the one-way streets (see FIGURE 1), even for a short distance.

If you violate parking laws, DO NOT be surprised if your vehicle is ticketed and possibly towed.

FIGURE 1. ON-STREET PARKING AND TRAVEL LANE RESTRICTIONS

**PARKING RESTRICTIONS REFLECT CONDITIONS AS OF MARCH 2019 BUT ARE SUBJECT TO CHANGE. <u>ALWAYS</u> CHECK POSTED SIGNAGE TO CONFIRM ON-STREET PARKING RESTRICTIONS.
